 Subject: Discontinuing UT4 Ultra Tugger®
 Date: 3/29/2017

Please inform our customers the Greenlee UT4 Ultra Tugger® family will be discontinued and replaced by the new Greenlee G6 Turbo™ Tugger, launching April 14th, 2017.

The G6 Turbo™ is our new 6,000 lb Tugger that will raise the bar in the mid-size cable puller market. The G6 Turbo™ is hands down faster across all loads versus the competition. It is designed to finish the cable pull safer and maximize productivity on the jobsite. The double capstan with two speed motor design allows electricians to pull the rope and the cable through conduit 25% faster with four different speed options. Also, the simple one-piece design allows less than one-minute setup and eliminates the downtime due to missing parts. The specially designed motor and gear box deliver power and durability that electrician's need for a heavy cable pull. It is rated to pull 4,000 lbs continuous load (almost double the competition) and pull up to 6,000 lbs. The anti-reverse feature on the capstan and force indicator on the pull help keep our electricians safe.

Please note that the Greenlee G6 Turbo™ Tugger floor mount unit will be available shortly after launch.
