

产品变更通知

PCN No.	Quectel_PCN_2022042903	Date of Issue (DD/MM/YYYY)	29/04/2022
---------	------------------------	-------------------------------	------------

1. General Information

Type of Change	Software Configuration Change for T-Mobile IP
Description of Change	For EC25&EC21&EG21&EG25(Mini PCIe)&EG91&EG95 series and EM05-G modules: There are two methods to update IP mode of partial modules certified by T-Mobile from IPv6 only to IPv4/v6: ● Send AT commands to update T-Mobile IP mode from IPv6 only to IPv4/v6 from MCU side ● Upgrade the firmware to the latest version Please send AT commands on the client device to update T-Mobile IP mode from IPv6 only to IPv4/v6 according to the AT command manual released with PCN. If customers need to upgrade the firmware to the latest version, please contact Quectel technical support.
Reason for Change	The IP mode of partial modules certified by T-Mobile is IPv6 only, but if customers' applications still need IPv4 even if the T-Mobile recommends IPv6 only, therefore Quectel suggests that such customers should update IP mode from IPv6 only to IPv4/IPv6.

3. Customer Impact and Recommended Action

1. The ordering codes (OC) remain unchanged.
2. Customers can implement the above solutions according to the specific application scenarios of their own equipment.

4. Customer Acknowledgement of Receipt

Please acknowledge receipt of this change notification by replying to info_PCN@quectel.com.

If no feedback is received within 30 days, Quectel may deem that this change has been tacitly accepted. User devices will change IP mode by updating FW or using the AT commands as described above if it necessary for customer.
