

Discontinuation of Kria -ED (encryption disabled) SKUs

This is to inform customers that -ED SKUs for all Kria products (production SOMs and Starter Kits) are now discontinued; standard Kria SKUs are unaffected. All the -ED backlog orders has been fulfilled and -ED SKUs will no longer be orderable.

The -ED part numbers that are no longer available are-

- SK-KV260-ED
- SK-KR260-G-ED
- SM-K26-XCL2GC-ED
- SM-K26-XCL2GI-ED

The encryption disabled SKUs were originally created to support customers in regions who were unable to import encryption-capable products into their country. Per our latest global trade compliance guidelines, these restrictions are now lifted for countries where AMD endeavors to do business so there is no longer a need to have a separate -ED SKU.

Customers who have purchased the -ED SKUs from distribution partners are still covered by our warranty and production lifetime terms. Customers who are currently looking to order -ED SKUs should instead place orders for the -G (encryption enabled) SKUs going forward. There's no change in features or performance between the -ED and -G products as previously addressed -
