Reason for Change:

Part supply issues

Schedule of Change:

March 22, 2023

Product Change:

New PCB R3.0.2 uses a different, more readily available footprint: PLCC package. Stock supply is an issue with the microcontroller used on PCB 3.0. New PCB R3.0.2 will be populated with ATMEGA8535-16JU (PLCC) versus the ATMEGA8535-16AU (TQFP) used on PCB 3.0.

When stock supply for the MCU is no longer an issue, we will be using PCB R3.0. All functionalities are the same.

Hardware Changes:

1. Microcontroller TQFP package is replaced with PLCC package (significantly larger).

2. Power, communication and GPO headers remain in the same location but few components have moved as necessary to accommodate the bigger IC
