**Switching element in Series 70, 84 and 92 –
Colour change of switch upper casing – UPDATE PI2131**

Dear Sir or Madam

Due to discontinuation of the black colourant by our plastic supplier, the switching elements with **part numbers 92-851.342 and 70-201.0** had to be produced with a white switch upper casing instead of a black one.

Our supplier has now found a replacement so that the switching element can be delivered **in black again**. The changeover to black has just started in the first week of October 2022.

Colour version until
Week 40/41

Example: Series 92

New colour version as from
Week 41/42

Attached to the PI newsletter you will find a list of affected articles. The affected switching elements are used in Series 70, 84 and 92.

Please check for which customers this message is relevant and inform them in an appropriate manner.

If you have any questions, please don't hesitate to contact us.

Kind regards

Sascha Kropf
