Filter-Nozzle Kit in P/N 5050696

Simco-Ion Top Gun ionizing gun and orION ionizing nozzle is integrated with a filter-nozzle assembly at the exit of the blowing air, ensuring that the air is clean. This filter-nozzle kit uses a special filter media that changes color as contaminants are trapped.

Because of the supply condition, Simco-Ion no longer offers replacement filter P/N 5050696 for Top Gun ionizing guns and Orion ionizing nozzles.

While the discontinued filter in P/N 5050696 features 99.97% coalescing retention of 0.3 to 0.6-micron aerosols and 0.3 particulates, the available premium filter in P/N 5051416, which has a better filtration ability of 99.99% coalescing retention and 0.01-micron particles.

P/N	Description	Availability
5050696	Top Gun & orION Filter-Nozzle Replacement Kit (2 per pkg)	Discontinued Immediately
5051416	Top Gun & orION Filter Premium Replacement Kit (2 per pkg)	Available

With this change, all Simco-Ion products – Top Gun’s and OrION’s - integrated with the current filter-nozzle assembly will upgrade to use the premium filter in P/N 5051416 for better filtration without price change.

This change will not affect the product performance, power, and form factor, except this premium filter having better-coalescing retention gives a greater restriction of airflow, thus, discharge time may be slower.
