Dual Fiber Amplifier

E3X-MDA incorporates 2 digital fiber amplifiers in one slimline housing. For applications requiring the detection of two objects simultaneously the E3X-MDA provides an easy to use operation saving space and set-up time.

- Two digital amplifiers in one slimline housing
- Twin output models – on/off or area (between two threshold values)
- Signal comparison functions (AND, OR, etc.)

Fast Response Digital Amplifier with Potentiometer

The E3X-NA-F provides a very fast response time and is the ideal amplifier for high speed detection applications.

- Short turn on time of only 20 μ s
- Easy adjustment with potentiometer

Pre-wired	E3X-NA11F	E3X-NA41F 2M

Color (RGB) Digital Fiber Amplifier

The E3X-DAC-S detects the color and returned light intensity of a mark or object and compares it with a stored RGB ratio or intensity value. The RGB ratio or contrast difference allows the stable detection of differently colored, black, grey or white marks or objects.

- White LED for color independence
- Fast response time of 60 μ s
- Timer function for variable ON or OFF delay up to 5 seconds
- Remote teaching or easy one-button teaching

SMALL SENSORS DELIVER PRECISE POSITIONING

Continuous miniaturization of robots and machinery for semiconductor, photovoltaic and electronics manufacturing require increasingly precise positioning data to maximize production yield and maintain high quality. Amplified Photomicrosensors deliver high precision in a simply mounted format. Embed them in rails for robots, X-Y positioning tables and conveyors for end-of-travel and home position inputs. All are designed for easy connection to PLCs and other controllers as part of a motion control solution.

- Wide choice of models: slotted, through-beam, reflective, and retro-reflective
- Special application solutions for liquid level detection, wafer carrier positioning, and object confirmation for robotic grippers

Ultra-compact, Lightweight Sensor Measures Any Material

The ZW confocal fiber displacement sensor delivers stable, non-contact, in-line measurement of heights, thicknesses and other dimensions. It solves the problems of traditional laser triangulation sensors: deviation between different material with inclination tolerance. The compact sensing head has no electronic parts to eliminate problems of installation space and mutual interference, electrical/magnetic noise, temperature rise and mechanical positioning.

- Ultra-compact sensing head: 24 x 24 mm; weighs only 105 g
- High flexibility fiber-optic cable from sensor to controller, extends up to 32 m
- Mount sensing head one time: no need to re-tune for changing materials

- Separate amplifier provides white LED light source, spectroscope and processor to convert reflected color light to distance
- Smart Monitor ZW Software simplifies setup and data collection/analysis
- EtherCAT models includes EtherNet/IP communications interface

RELIABLE DC POWER FOR YOUR PANEL

Keep critical equipment operational with Omron Smart Display Power Supplies

Omron is a world leader in the development and manufacturing of industrial switching power supplies. More than 25 years ago we launched our first compact line, the S82K, and since 2002, our S8VS compact series has been an automatic choice with customers. We expand on this legacy with the introduction of the S8VK series. To provide the perfect solution to match every customer's need, we have launched 3 different families within the S8VK series:

- The standard S8VK-G models
- The redundancy units S8VK-R models
- The three-phase S8VK-T models

MONITORING RELAYS

The K8AK/K8DS series power monitoring relays can detect problems such as:

- Over- and under-currents, and over- and under-voltages
- Phase losses (where voltage is not supplied to one or more phases because of disconnected power lines, loose terminals, or contact failures)
- Phase-sequence problems (which can result, for example, in motors rotating backwards)
- Voltage asymmetries where the voltages of different phases are different because of phase losses or other causes).

The relays are available in various single- and three-phase versions for currents up to 200 A and voltages up to 600 V. The 17.5 mm and 22.5 mm wide DIN-rail mounting devices save space in control panels.

G2RV-SL500 – Reduce wiring time by using push-in technology and cross bars

With the G2RV-SL500 series, only two steps are required to achieve a reliable connection between wire and terminal. Just remove the isolation and push in the wire. Cross bars make your life even easier, as they can be tailored by breaking pins away to meet your configuration requirements.

- No tools required
- Fits stranded wires (with ferrules) 0.5 - 2.5 mm²
- Fits solid wires 0.5 - 4.0 mm²

Omron offers Solid State Relays (SSRs) in a wide variety of output currents and voltages to handle frequently cycling loads. Control-panel mount types with built-in heat-sink (G3PE) and without (G3NA) are ideal for power switching. Compact SSRs for I/O Interfacing include ultra-slim G3RV and G3R.

- Industrial 6 mm 'slim' SSR which is G2RV compatible (G3RV)
- G2RS compatible high-speed interface solutions (G3R-I/O)
- G3NA with 5-90 A output current, G3PE up to 45 A
- Output voltages up to 660 VAC / 200 VDC available on G3NA
- Effectively absorbing of external surge thanks to the built-in varistor/surge pass circuit

MC3, MC4 and MC6 Series Safety Mat Controllers

The MC Series safety mat controllers are used in conjunction with a four-wire, normally open, safety mat where perimeter guarding is required. These control reliable controllers send a stop signal to the guarded machine when an object of sufficient weight is detected on the active mat area.

The MC Series controllers, when combined with a four-wire UM or UMQ series mat, provide access guarding and improved productivity. The work area is fully visible and accessible.

The controller meets the requirement of EN 1760-1:1998, EN 13849-1, ANSI/RIA 15.06-1999 (R2009), ANSI B11.19-2010, OSHA 1910-217C. CSA and UL508.

Stainless Steel Rope Pull Emergency Stop Switch

- Rope spans up to 100 m (328 ft.) means fewer number of switches required per application
- Tension indicator maintains the proper rope tension
- Contact arrangements of 3N/C + 1 N/O or 2N/C + 2 N/O
- IP67 (NEMA 6) enclosure withstands water washdown cleaning
- 316 stainless steel cast housing and stainless steel hardware
- Reset button—the blue reset button must be pushed in order to return to “machine run” condition following switch actuation by a pulled or slacked rope
- Vibration tolerant—the snap-acting switch contacts protect against nuisance tripping due to vibration
- Indicator beacon—the dual indicator beacon is optional on the ER6022-SS; the indicator beacon can be wired to flash red to indicate a tripped switch or glow a constant green to indicate a properly reset switch
- Optional E-stop button—may be added or replaced in the field
- Rubber bellows contain UV inhibitor making the switches suitable for outdoor applications
- Extreme Cold Version—for applications down to -40°C

Conforms to IEC947-5-1, IEC947-5-5, EN418, UL508, BS5304
UL and C-UL listed, TUV certified

Enclosure Ratings

NEMA Ratings

NEMA (National Electrical Manufacturers Association) ratings ensure protection against the following environmental conditions.

IP Ratings

The IEC (International Electrotechnical Commission) defines degrees of protection provided by electrical enclosures with respect to personnel, equipment within the enclosure and ingress of water. The degree of protection is expressed by the letters “IP” followed by two numerals (Example: IP67). See the table below for an explanation of the numerals.

The following information is drawn from publication IEC 60529 of 2004 and 529 of 1989.

By contrast to NEMA, “IP” ratings do not apply to protection against the risk of explosion or conditions such as humidity, corrosive gases, fungi or vermin. Also, different parts of a piece of equipment can have different degrees of protection and still comply with the standards. An example would be the opening in the base of an enclosure.

1st characteristic numeral		2nd characteristic numeral	
Protection against contact and penetration of solid bodies.		Protection against the penetration of liquids.	
0	Not protected	0	Not protected
1	Protection against solid objects greater than 50 mm	1	Protection against dripping water
2	Protection against solid objects greater than 12 mm	2	Protection against dripping water when tilted up to 15°
3	Protection against solid objects greater than 2.5 mm	3	Protection against spraying water
4	Protection against solid objects greater than 1 mm	4	Protection against splashing water
5	Dust protected	5	Protection against water jets
6	Dust tight	6	Protection against heavy seas
--		7	Protection against the effects of immersion
--		8	Protection against submersion
--		9K	Protection against steam jet cleaning

Social Responsibility

WORKING FOR THE BENEFIT OF SOCIETY

Our approach to product development and business is guided by core values based on serving the needs of society. This is reflected in the Omron corporate motto...

“At work for a better life, a better world for all.”

Conceived by Omron’s founder Kazuma Tateisi, these words reflect his pioneering idea that a company should fulfill its responsibility to society rather than solely focusing on productivity, efficiency, sales and profits. Our unending commitment to identifying social needs is embedded in Omron’s corporate DNA, along with a challenge-oriented spirit capable of responding to those needs.

The Omron Foundation in the Americas funds charitable donations for disaster relief and recovery efforts, and matches individual employee donations to social support, education, and cultural enrichment organizations. Each year on May 10, Omron employees around the world actively participate in charitable activities to honor the core values established by the company’s founder. Throughout the year, Omron offers team and individual opportunities at partner charitable organizations to underscore the need for social responsibility as a corporate priority.

ENVIRONMENTAL PROTECTION

Providing environmentally safe products to the world.

Omron’s social responsibility also takes the form of decisions and actions that help preserve and restore the environment. Far in advance of directives banning the use of harmful chemicals in making electronics (RoHS), Omron adopted an ECO policy that works to eliminate these and other pollutants. The policy also mandates significant reductions in power consumption to conserve energy and natural resources for future generations.
