## SPEC for Mass Production

Spec No.	CPD-355343AL-01 Rev.01
Date	March 11, 2024

### **TYPE:** T-55343GD035JU-LW-ALN

<3.5 inch QVGA transmissive color TFT with LED backlight and touch panel>

### **CONTENTS**

- 1. Application
- 2. General Specifications
- 3. Operating Conditions
- 4. Block Diagram
- 5. I/O Terminal
- 6. Electrical Specifications
- 7. Optical Specifications
- 8. Test
- 9. Appearance Standards
- 10. Lot Number Identification
- 11. Applying Precautions
- 12. Precautions Relating Product Handling
- 13. Outline Drawing

#### KYOCERA CORPORATION

This specification is subject to change without notice. Consult Kyocera before ordering.

Original	Designed by: Engi	neering dept.		Confirmed by: QA dept.
Issue Date	Prepared	Checked	Approved	Approved
April 5, 2023	K. Komurasaki	T. Fukui	A. Iwasaki	T. Sawada

# Warning

- 1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.
- 2. Customer agrees to indemnity, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

#### Caution

- 1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.
- 2. Please note that we may not be able to respond to new environmental regulations after receiving the final mass production order for this product.

# 1. Application

This specification applies to TFT-LCD module  $\lceil$  with Touch Panel  $\rfloor$  . (T-55343GD035JU-LW-ALN)

### 2. General Specifications

Screen Size : 3.5 inches (8.9cm) Diagonal

Active Area :  $70.08(W) \times 52.56(H) \text{ mm}$ 

Display Format :  $320(W) \times 3[R.G.B] \times 240(H)$ 

Pixel Size :  $0.073 \times 3$ [R.G.B] (W)  $\times 0.219$ (H) mm

Pixel Arrangement : RGB-Stripe

Color Depth : 16M colors

Display Mode : Normally White

Surface Treatment : AG Coating

Interface : 24-bit Digital RGB interface(8-bit / color)

Outline Dimension :  $79.0(W) \times 65.0(H) \times 4.8 Max.*(D) mm$ 

\*Without FPC and Component Area

Weight : 46.5g Max.

Backlight : LED Backlight / White

RoHS Directive : This product satisfies material requirement of RoHS directive.

### 3. Operating Conditions

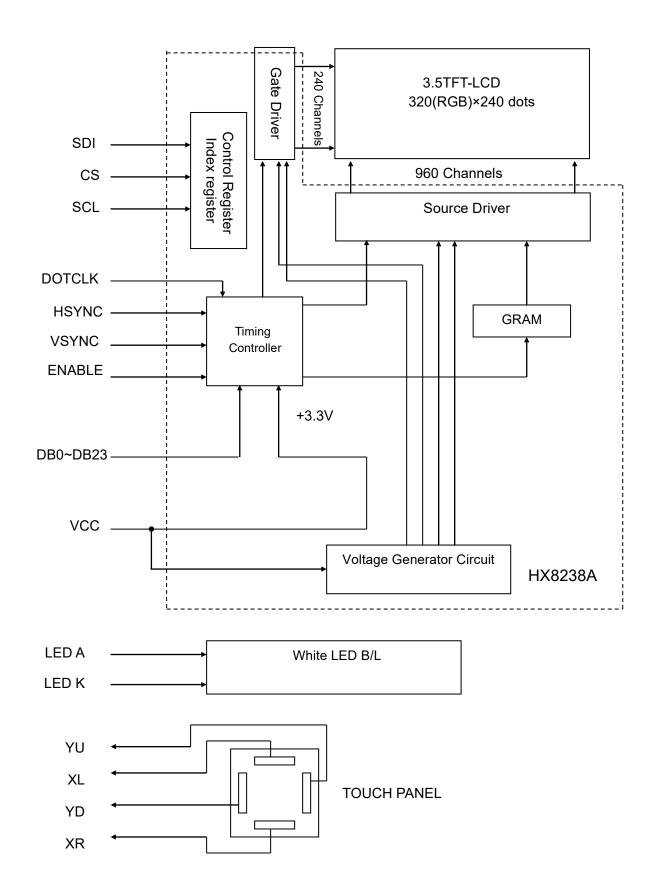

Item	Conditions	Temperature range	Remark
Operating Temperature Range	Panel surface	−20 <b>~</b> 70°C	Note1
Storage Temperature Range	Panel surface	-30 <b>~</b> 80°C	

Note1: Operating temperature range defines the operation only and the contrast, response time and other display optical characteristics are set at Ta=+25°C.

CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	17

### 6.7 Lighting Specifications

## 6.7.1 Absolute Maximum Ratings

Ta=25°C

Parameter	Symbol	Conditions	Min.	Тур.	Max.	Units
Forward Current	${ m I_F}$	Note 2	-	-	35	mA
Allowable Reverse Current	${ m I}_{ m R}$	-	-	-	-	μA
LED Power Dissipation	$P_D$	-	-	-	0.64	W

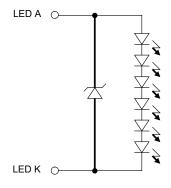

Note 1: This value is for each 1 line.

Note 2: Refer to the forward current derating curve.

#### [Forword Current Derating Curve]

15 -30 25 70 Ta (°C)

### 6.7.2 Operating Characteristics

 $Ta{=}25^{\circ}C$ 

Parameter	Symbol	Conditions	Min.	Тур.	Max.	Units
Forwrad Current	${ m I}_{ m F}$	Note1	-	20	-	mA
Forward Voltage	$V_{\mathrm{F}}$	$I_F$ =20mA/1 line	15.3	17.1	18.6	V
Power	PL	-	-	0.34	0.37	W

Note1: Current of LED par chip must be lower than 15mA at  $70\,^{\circ}$ C.

The current of LED must be tuned to satisfy as Forward Current Derating Curve mentioned relationship.

Note1:Under the condition of maximum brightness

◆ Conditions for Measuring

Environment: Dark room with no light or close to no light.

 $\diamondsuit$  Temperature: 25±5°C  $\diamondsuit$  Humidity: 40~70%RH

♦ Optimal viewing angle (The angle of Least Color Inversion)

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	20

◆ Method of Brightness Measurement (Fig.1)

### (1) Measuring Point

Center of Display  $\theta=0^{\circ}, \phi=0^{\circ}$ 

On condition  $\theta$ : A vertical angle from measuring direction to perpendicular.

φ: A horizontal angle from measuring direction to perpendicular.

#### (2) Method of Measuring

Apply signal voltage (displayed in white) to maximize brightness and measure brightness  $B\left(cd/m^2\right)$ .

The distance between front lens of the measuring device to surface panel is 500mm.

Measured after backlight has been lit for more than 30 minutes.

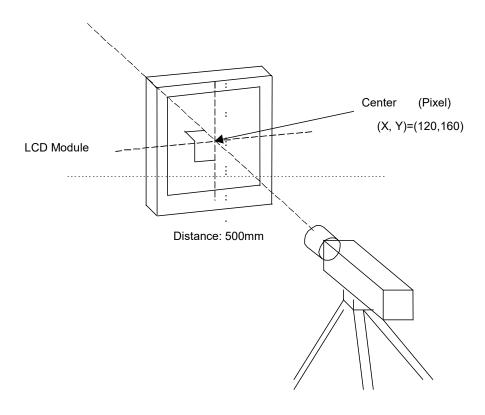

Fig. 1

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	21

- ◆ Method of Contrast Measurement (Fig.1)
  - (1) Measuring Point

Center of display: same as Method of Brightness Measurement

- (2) Method of Measuring
  - Set LCD module to  $\theta=0^{\circ}$ ,  $\phi=0^{\circ}$ .
  - · Change signal voltage to measure maximum brightness Y1 and minimum brightness Y2.
  - · Contrast is derived from CR=Y1/Y2.
- ◆ Definition of Brightness Uniformity (Fig.2)

  Definition is calculated from the 5 points (S0~S4) on the diagram below.

pointed in caronical aron one o points (20 21, on the anagram seron)

Standard value of Brightness Uniformity[%] = 
$$\frac{(S0\sim S4) \text{ MIN}}{(S0\sim S4) \text{ MAX}} \times 100\%$$

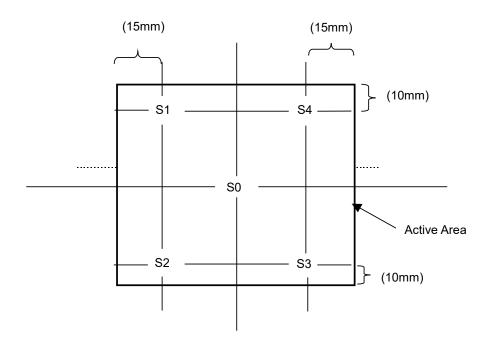

Fig. 2

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	22

- ◆ Method of Viewing Angle Measurement (Fig.3)
  - (1) Measuring Point

Center of display: Same as Method of Brightness Measurement

- (2) Angle of Measuring
  - $\theta$ : An angle vertical to perpendicular line from the viewing direction.
  - $\boldsymbol{\phi}$  : An angle horizontal to perpendicular from the viewing direction.

### (3) Method of Measuring

Set the module on the rotation table and measure a vertical axis direction in the state that fixed  $\phi$ =0° horizontal axis direction to  $\theta$ =90°.

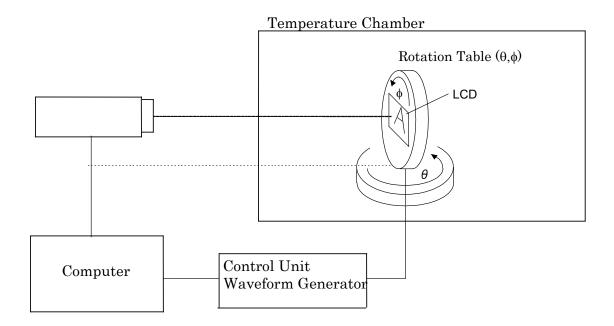

Fig. 3

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	23

- ◆ Measuring Response Time (Fig.4)
  - (1) Measuring Point

Center of display, same as Method of Brightness Measurement

#### (2) Method of Measuring

- Set LCD panel to  $\theta=0^{\circ}$ , and  $\phi=0^{\circ}$ .
- · Input white \rightarrow black \rightarrow white to display by switching signal voltage.
- If the luminance is 0% and 100% immediately before the change of signal voltage, then  $\tau_r$  is optical response time during the change from 90% to 10% immediately after rise of signal voltage, and  $\tau_d$  is optical response time during the change from 10% to 90% immediately after decay of signal voltage.

## 7.2 Definition of Viewing Angle and Optimum Viewing Area

\*Point • shows the point where contrast ratio is measured.:  $\theta$ = 0°,  $\phi$ = -°

\*Driving condition: Ff=60Hz

\*Area shows typ. CR≥30

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	25

## 8. <u>Test</u>

No abnormal function and appearance are found after the following tests.

Conditions: Unless otherwise specified, tests will be conducted under the following condition.

 $\begin{array}{ll} Temperature & : 20 \pm 5 ^{\circ} C \\ Humidity & : 65 \pm 5 ^{\circ} RH \end{array}$ 

tests will be not conducted under functioning state.

No.	Parameter	Conditions	Notes
1	High Temperature Operating	70°C±2°C, 96hrs (operation state)	
2	Low Temperature Operating	-20°C±2°C, 96hrs (operation state)	1
3	High Temperature Storage	80°C±2°C, 96hrs	2
4	Low Temperature Storage	-30°C±2°C, 96hrs	1,2
5	Damp Proof Test	40°C±2°C,90~95%RH, 96hrs	1,2
6	Vibration Test	Total fixed amplitude: 1.5mm  Vibration Frequency: 10~55Hz  One cycle 60 seconds to 3 directions of X, Y, Z for	3
		each 15 minutes	
7	Shock Test	To be measured after dropping from 60cm high on the concrete surface in packing state.  Dropping method corner dropping  A corner: once Edge dropping B,C,D edge: once Face dropping E,F,G face: once	

Note 1: No dew condensation to be observed.

Note 2: The function test shall be conducted after 4 hours storage at the normal Temperature and humidity after removed from the test chamber.

Note 3 :Vibration test will be conducted to the product itself without putting it in a container.

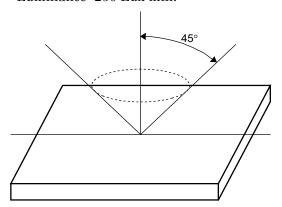

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	26

# 9. Appearance Standards

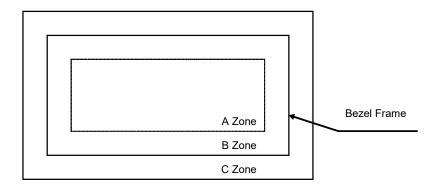

### 9.1 Inspection conditions

The distance between the eyes and the sample shall be more than 30cm. All directions for inspecting the sample should be within  $45^{\circ}$  against perpendicular line.

Luminance: 250 Lux min.

## 9.2 Definition of applicable Zones

A Zone: Active display area

B Zone: Area from outside of "A Zone" to validity viewing area

C Zone: Rest parts

A Zone + B Zone = Validity viewing area

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	27

## 10. Lot Number Identification

The lot number shall be indicated on the FPC of each LCD.

No①. - No④. above indicate

- ① Module Product Number
- ② Manufacturing Date
- ③ Version Number
- 4 Country of Origin

② Year: The last one digit of the year

Month: See below Day: 01~31

Month	Jan.	Feb.	Mar.	Apr.	May	Jun.
Code	1	2	3	4	5	6

Month	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.
Code	7	8	9	X	Y	Z

## 11. Applying Precautions

Please contact us when questions and/or new problems not specified in this Specifications arise.

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	31

## 12. Precautions Relating Product Handling

The Following precautions will guide you in handling our product correctly.

- 1) Liquid crystal display devices
  - 1. The liquid crystal display panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care.
  - 2. The polarizer adhering to the surface of the LCD is made of a soft material. Guard against scratching it.

- 2) Care of the liquid crystal display module against static electricity discharge.
  - 1. When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect worktables against the hazards of electrical shock.
  - 2. Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
  - 3. Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.
- 3) When the LCD module must be stored for long periods of time:
  - 1. Protect the modules from high temperature and humidity.

Conditions: Temperature : 0°C~40°C

Humidity : Less than 60%RH No dew condensation to be observed.

- 2. Keep the modules out of direct sunlight or direct exposure to ultraviolet rays.
- 3. Protect the modules from excessive external forces.
- 4. After a long period storage of the product (or LCD) under the low temperature and the dark, it might take a longer time to turn on the CCFL than normal.
- 4) Use the module with a power supply that is equipped with an overcurrent protector circuit, since the module is not provided with this protective feature.
- 5) Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.
- 6) Conductivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.
- 7) For models which use touch panels:
  - 1. Do not stack up modules since they can be damaged by components on neighboring modules.
  - 2. Do not place heavy objects on top of the product. This could cause glass breakage.
- 8) For models which use COG, TAB, or COF:
  - 1. The mechanical strength of the product is low since the IC chip faces out unprotected from the rear. Be sure to protect the rear of the IC chip from external forces.
  - 2. Given the fact that the rear of the IC chip is left exposed, in order to protect the unit from electrical damage, avoid installation configurations in which the rear of the IC chip runs the risk of making any electrical contact.
- 9) Models which use flexible cable, heat seal, or TAB:
  - 1. In order to maintain reliability, do not touch or hold by the connector area.
  - 2. Avoid any bending, pulling, or other excessive force, which can result in broken connections.

Spec No.	Part No.	Page
CPD-355343AL-01 Rev.01	T-55343GD035JU-LW-ALN	32

- 10) In case of buffer material such as cushion / gasket is assembled into LCD module, it may have an adverse effect on connecting parts (LCD panel-TCP / HEAT SEAL / FPC /etc., PCB-TCP / HEAT SEAL / FPC etc., TCP-HEAT SEAL, TCP-FPC, HEAT SEAL-FPC, etc.,) depending on its materials. Please check and evaluate these materials carefully before use.
- 11) In case of acrylic plate is attached to front side of LCD panel, cloudiness (very small cracks) can occur on acrylic plate, being influenced by some components generated from polarizer film.
  - Please check and evaluate those acrylic materials carefully before use.
- 12) Flickering due to optical interference may occur by combination of a) LCD driving frame frequency decided by either internal oscillator in driver IC or external clock input by the customer and b) lighting frequency of either backlight or other light sources. Please evaluate enough at the environment of actual use, and decide the driving condition that does not cause flickering.
