Re: WAGO Smart Printer End of Life Notice

WAGO continues to research, develop, and create new products which supplement and optimize our existing product families. These products are characterized by a life cycle that is long, but as we know, not infinite. We would like to inform you that the WAGO Smart Printer will be discontinued in the near future.

Affected products/variants:

The following Smart Printer kits are being discontinued: **258-5000** and **258-5001**.

Final Sale Date:

July 15, 2024, will mark the End of Sale date for these products. The End of Sale date is the latest order date where you can order the items without restrictions. This date is subject to change if supplies run out beforehand. After the End of Sale date, no further order can/will be processed any more.

Final Delivery Date:

August 31, 2024, will be the last delivery date. This means that up to this date the orders which were received until the last call date will be delivered. However, this date is once again subject to change if supplies do not last.

Replacement Item:

With each discontinued product, WAGO always creates a new solution or suggests an alternative. In the future, we will be coming out with new Smart Printer kits (**258-5107** and **258-5108**). The new kits include the new Smart Printer with all other parts staying the same as their predecessors:

The new Smart Printer will offer the following advantages:

- Bluetooth connection for possible mobile use, optional battery, and tool bag
- Free marking app and desktop software
- Smart Script desktop can be used
- Sensor settings by real dimensions
- Larger memory allowing for endless print marking media

More information about the Smart Printer can be found on our website at www.wago.com/us/discover-marking. Please make note of the deadlines in your documents and feel free to contact us if you have any questions.

Sincerely,

WAGO Corporation
