### Purpose/objective of the change

Update and bug fixing of the firmware of the E SERIES devices E.SLEEVE and E.WIRE

### Detailed description of the change

As part of the continuous improvement process, corrections to the firmware of the E SERIES devices E.SLEEVE and E.WIRE have been implemented.  
In firmware version 1.0.5, negative values were not saved for the offset settings. This will be rectified with the firmware version 1.0.6 that has now been released.  
The firmware updates are provided as usual via the downloads/firmware update area on the respective device pages on the Phoenix Contact website at <https://www.phoenixcontact.com>.  
To install the update, copy the corresponding file to a USB stick to a folder named "misc". After this USB stick has been plugged into an E SERIES printer, the respective firmware update can be selected and executed in the Settings menu # Extras # Firmware update # USB memory # ....

### Identifying characteristics

New firmware version for E.SLEEVE: "Sleeveopener\_v1.0.6-release"

New firmware version for E.WIRE: "Wiremark\_v1.0.6-release"
