80/20® Inc.

*The **Industrial** Erector Set®*

First and foremost, I'm sure you're wondering "What is 80/20?" Who are we, what do we sell, and what's our value. Simply stated, 80/20 is a T-slot aluminum construction system you can use to build virtually anything.

When you think of 80/20 think of an "erector set" for adults. You mix, match, assemble and reassemble our products to create your customized solution or innovation.

We go above and beyond selling parts and pieces; we offer an experience. 80/20 provides a one-stop shop for our customers.

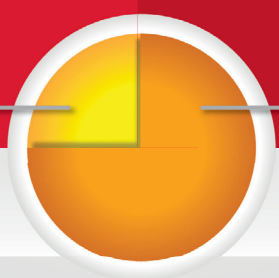
We offer several services such as technical design assistance, custom machining, assembly services, and an in-house custom panel shop. 80/20 ensures that our customers can expect a high-quality product each and every time; consistency is a hallmark.

Why the Name 80/20?

In business, the 80/20 theory is a powerful tool. This theory is called Pareto's Law after Vilfredo Pareto (1843-1923), an Italian economist and sociologist who said that 80% of your results come from 20% of your efforts. We run our organization based upon this theory and everyone shares in the advantages.

T-SLOT ALUMINUM Vs WELDED STEEL

T-SLOT ALUMINUM	WELDED STEEL
WEIGHS LESS THAN STEEL	MORE TIME AND LABOR
COSTS LESS THAN STEEL	INCREASED EXPENSES
NO WELDING REQUIRED	WELDING REQUIRED
CORROSION RESISTANT	NEEDS PAINT & PRIMER
INTEGRATE COMPONENTS	FABRICATION REQUIRED
STRENGTH SIMILAR TO STEEL	MORE HAZARDOUS
MACHINING NOT REQUIRED	MACHINING REQUIRED
MODULAR DESIGN	ONE FIXED DESIGN



LABOR TIME: **0.5HRS**

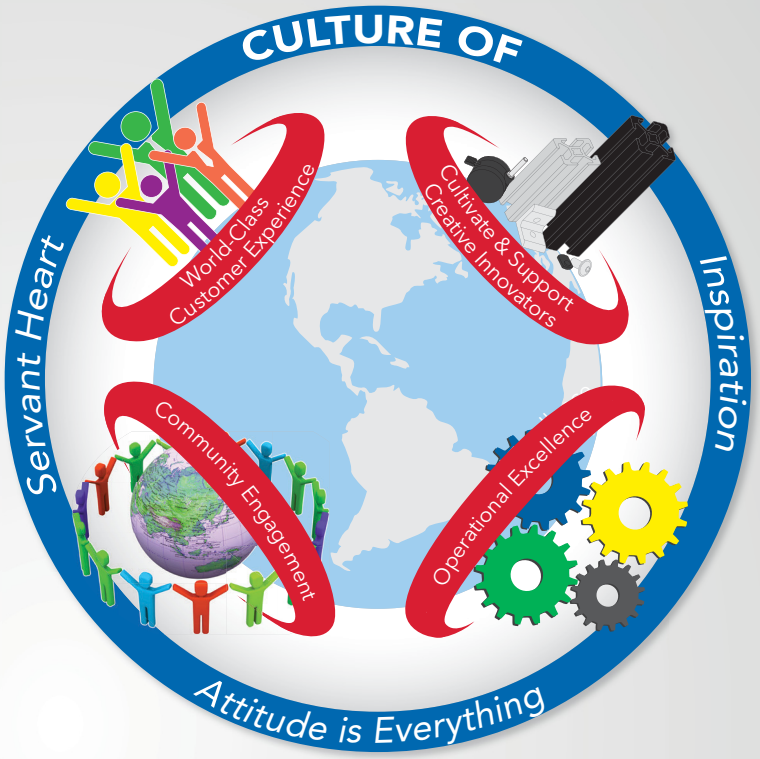
LABOR TIME: **4HRS**

Driven By Our Culture of Unity

We've achieved growth by being continually focused on quality, innovation, and improvement. Our high level of quality is a result of our culture here at 80/20 which revolves around attitude.

At 80/20 we know that personal attitude is the one thing everybody can control. We hand-pick our employees and have found that those with a positive attitude thrive. Our culture just flat out doesn't tolerate a negative attitude.

This positive-attitude culture leads to empowerment of our people and a customer-driven vision. The lens through which we see the world and make business decisions is focused on our value to the customer.



Letter From the Founder

80/20's success evolved from a blend of creative product innovations, a strong sense of our customers' needs, and an "ATTITUDE"!

The "80/20 ATTITUDE" is the cornerstone of our company. It is a reflection of our service to you, our customers, our decades of industry experience, and our willingness to do what it takes to get the job done.

There are a lot of things going on in this world that we cannot control. We cannot control gas prices, the decisions our government leaders make or the weather but we are in charge of our attitudes.

DON WOOD
FOUNDER

80/20® MISSION

Empower and encourage the designer and builder in all of us through:

- Cultivating and Supporting Creative Innovators
- Community Engagement
- Operational Excellence
- World-Class Customer Experience

80/20® VISION

Relentless pursuit to provide innovative modular building systems that inspire custom solutions.

We strive to develop and facilitate our building systems to construct virtually anything to be used virtually anywhere, while at the same time creating ways to share great ideas that encompass the limitless power of the human creative spirit.

Servant Heart

- The Golden Rule (treat others as you want to be treated)
- Empathic Listening
- Little acts of kindness make a big difference

Attitude is Everything

- Personal accountability – we have control over our attitudes

> "Life is 10% what happens to me and 90% how I react to it."
>
> **- Charles Swindoll**

Inspiration

- Agent of Change
- Empower and energize through continually seeking and supporting innovation
- Foster and encourage creative thinking

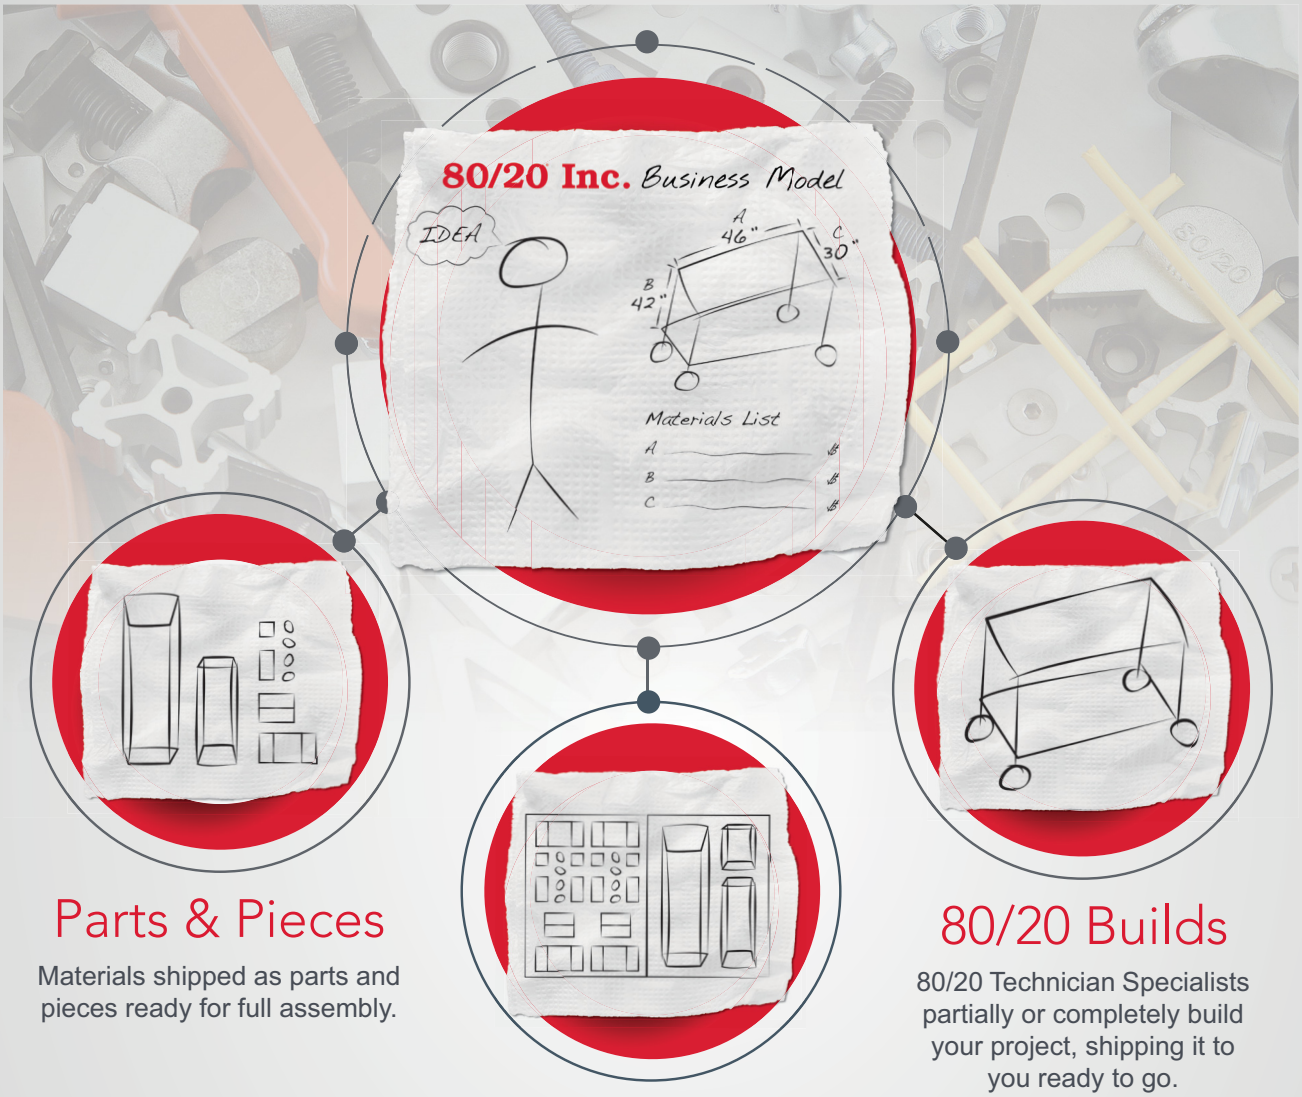
Peace of Mind

What Can You Expect With 80/20's Peace of Mind?

We want you to know exactly what you can expect when partnering with 80/20. Our philosophy is to provide you with peace of mind; every day we strive to meet and exceed your expectations. Browse through the following pages for more details about these topics.

- **ONE-STOP-SHOP** – Avoid the hassles and inefficiencies of multiple vendors. With 80/20 you have it all in one place. See page 30 for more details.
- **LOCAL DISTRIBUTORS** – You will receive extensive field support through the 80/20 distributor network. On-site project evaluations, technical support, and demonstrations are just a phone call away. For more details see page 32.
- **DESIGN ASSISTANCE** – When you need help taking your project beyond a sketch 80/20 provides design assistance. Send us your drawing and dimensions and we'll get you started. For more details see page 33.
- **FREE AUTOMATED SOFTWARE** - You have a range of software options to choose from to make designing with 80/20 easy. Visit pages 34-35.
- **FREE DRAWING FILES** - Integrate 80/20 product into your existing design. Choose from 3D, 2D, and more for most design programs. Download drawing files at www.8020.net. Visit pages 34-35.
- **80/20 BUILDS** - Let seasoned builders construct your project for you. Get all the details on page 36.
- **CUSTOM MACHINING** - When you need a unique part take advantage of our Custom Machining service. We can machine any part or piece from the 80/20 catalog or beyond to help fit your needs. Additional details on page 38.
- **CUSTOM PACKAGING** - When you need something beyond 80/20's standard packing for your order, we offer a custom packaging service to accommodate your more detailed and specific requirements. See page 44.
- **NO MINIMUM ORDERS** - If you need it, we'll ship it. We appreciate all of your business, even the small orders.
- **LARGEST PRODUCT OFFERING IN THE BUSINESS!**
- **YOU ARE THE BOSS – WE SERVE YOU!**

Peace of mind means you have a partner in creating your project….from concept to design to completion.



Parts & Pieces

Materials shipped as parts and pieces ready for full assembly.

Kit Form

Materials packaged as a kit(s) and ready for easy assembly.

80/20 Builds

80/20 Technician Specialists partially or completely build your project, shipping it to you ready to go.

Need Help Getting Started?

Peace of Mind

One-Stop-Shop

80/20 One-Stop-Shopping means you get convenient and efficient products and solutions, as well as the services to augment your order, all in one place. Save the time, hassle, and headache that come from working with multiple vendors.

Our commitment to being your one-stop-shop means that we have no minimum orders; we want ALL of your business. We know that your project is unique and that you need the flexibility to order in small or large quantities.

It also means we listen to your needs and continually add to our stock of products. We already have the largest product offering in the industry and it's only going to continue to grow! Our products are customer-driven and always expanding. And if it's something we don't currently carry, we'll source it for you.

In order to make your 80/20 experience simple and straightforward we have in-house capabilities to support our dedication to being your one-stop-shop. These are top-of-the-line machine shops and services that produce at the same level of quality you can expect with anything 80/20. These valuable resources are at your disposal to streamline your processes and save you time.

Call one of our Design Technicians today about making 80/20 your one-stop-shop

The 80/20 Difference

We know how frustrating it is when that order you placed arrives damaged, with incorrect parts, or in poor quality. At 80/20 we set high standards for each and every process to make sure you never experience this disappointment with any 80/20 shipment.

At 80/20 we go the extra mile to ensure you get the product you want how you want it. We adhere to rigorous quality checks throughout the entire product lifecycle. This 80/20 difference means that on every order, your parts will be cleaned, and individually packed by type. Hardware and parts will be clearly labeled and packaged with appropriate measures for safe transit.

For orders that you need segmented into kits or bundles, that's not a problem. Receiving your shipment in kit form is especially useful for instances where you have multiple quantities of the same project, allowing for easy organization and setup.

If you are ordering large quantities, our bundling service packages similar products together. For instance, all of your bars will be packed together and all of your panels packed together. As with all orders, they will be clearly labeled. Bundled orders typically have lower freight costs due to their consolidated nature.

When you have an order with specific packing requirements, we can accommodate.

Visit our Custom Packaging page for more information on special packing and labeling services.

Ongoing Support

Your 80/20 support doesn't end when you receive your order. If you have questions or need assembly advice or suggestions, we've got you covered. Our dedication to providing you quality products and services is all-inclusive; we want to partner with you on your entire solution.

You also have access to an extensive network of local distributors able to assist with on-site needs or product information. These knowledgeable specialists work with you to make sure you're completely satisfied with your 80/20 products.

On the off chance that your order isn't exactly what you expected, we'll make your return simple and painless and expedite the fulfillment of a replacement. Visit our return policy on page 46 and you can always speak to a representative to work through the process with you.

Peace of Mind

Customer Support

It's important that you get the information, assistance and answers you need when you need them. You don't want to spend time navigating through a stream of prompts or being passed from one person to another.

At 80/20 our phone is answered by a live person who will quickly direct you to the right person. Our hours of operation are from 7:00 a.m. to 5:30 p.m. ET and if you need after-hours assistance we have personnel available.

If you prefer the convenience of online assistance we offer live chat sessions to accommodate your schedule and provide interactive support. You can expect prompt responses and useful information.

From product questions to order tracking or design assistance, we have an extensive network of support specialists ready to help through a variety of communication channels. Whether you prefer email, phone, or live chats, you'll work with knowledgeable and experienced personnel to get the dedicated attention and information you need in a quick, concise manner.

Contact a Representative today for product information, design assistance, order tracking, or any other questions you may have.

Local Distributor Network

80/20 has an extensive network of local distributors to serve your full-cycle needs. These specialists provide a range of services from on-site demonstrations and evaluations to after-order assistance.

Your local distributor is there for you throughout every stage of the 80/20 experience. Even before you begin designing your solution, technicians can visit your business to provide a review of your equipment and processes. You'll find that distributors have "80/20 eyes." They can see places and procedures where 80/20 products and services will help speed up product lifecycles, cut your costs, or create synergies.

Local distributors are also available for recommendations on integrating 80/20 with your current equipment and resources. 80/20 partners with distributors focused on a robust line card able to serve a diverse industry base and accommodate your total-project requirements.

Online Assistance

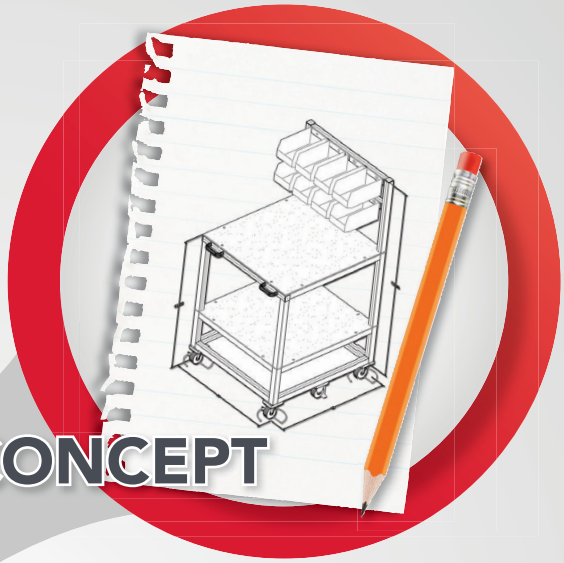
Distributor Lookup

Use the Distributor Lookup tool to find your local 80/20 partner. Visit 8020.net/distributor-support

Design Assistance: From Concept to Completion

We have highly skilled Design Technicians on-staff to provide you a custom quote and offer optimization recommendations. These experienced technicians will see your solution through from idea to production. We'll help you save costs by finding the best, most economical option to get the job done.

Our technicians have a great eye for detail and take the time to review your design for accuracy. We'll work with you to address your requirements.



Local Assistance

Our local distributors are also available through an extensive network for added support. 80/20 distributors are the most knowledgeable and experienced in the industry.

No Project Too Big or Too Small

There are no size limits on what we will quote. No design is too big or too small; we appreciate all of your business and want to work with you on any project.

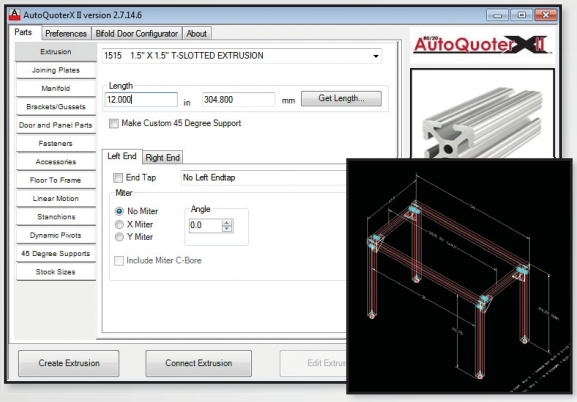
Online Design Assistance Tool

Our online tool makes it fast and straight-forward to submit your request for design assistance. Simply fill out the preliminary design sheet and, if applicable, upload your drawing(s).

For additional details or to use the Online Design Assistance Tool visit our website at www.8020.net.

Free Design Tools

80/20 offers several free tools, libraries, and drawing files to make it easy for you to design and enhance your 80/20 project. This variety of resources also make it simple for you to integrate 80/20 products into existing designs. Be sure to check out our YouTube site for helpful hints as well as tips and tricks videos.

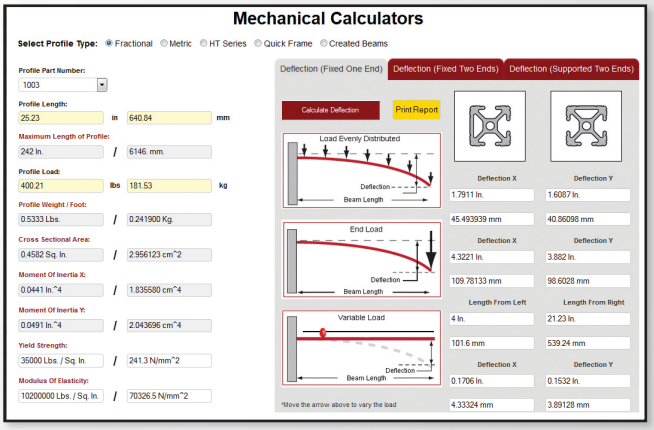


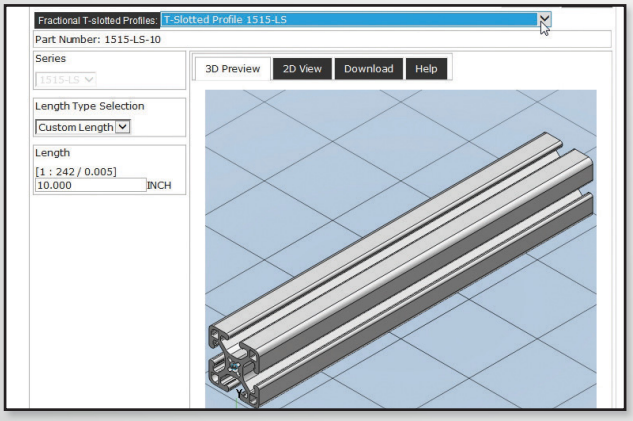
80/20 AutoQuoterX II®

AutoQuoterX® II is used in conjunction with versions of AutoCAD® software for optimum design capabilities. It is free and can be downloaded from our website. This plugin features an easy-to-use interface to streamline the design process and generate a detailed bill of materials. We are continually updating and enhancing AutoQuoterX® II tools and resources.

80/20® Inc. Tech Toolkit™

Tech Toolkit™ offers bundled design tools to provide guidance and speed up design time. These tools will help specify the profiles that work best for your application. Use the built-in conversion calculator to cross-reference calculations. There is also an online deflection calculator at 8020.net for beam deflection, as well as a miter cut worksheet to assist in creating drawings, analyzing real-life limits, and more.





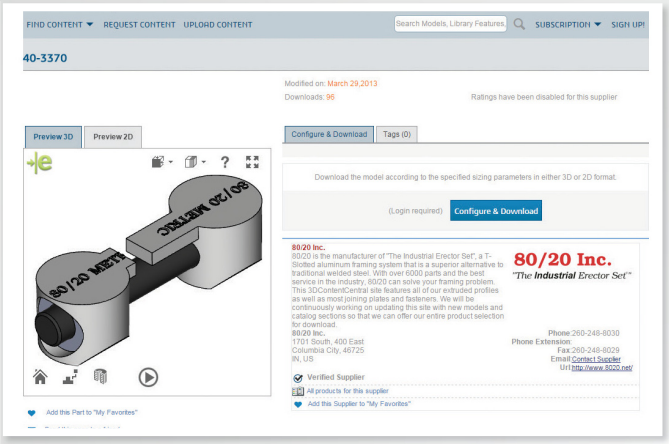
80/20 PART SOURCE™

CAD File Library Powered By PARTsolutions®

80/20's PartSource® is a CAD library powered by PARTSolutions® and is accessible directly from our website. It includes design files for parts and profiles. Products are available in both 2D and 3D file types, supporting a variety of CAD packages. Users of Inventor® also have the added benefit of a direct link to PARTSolutions®. These design files are also available at 8020.net on each product page.

SolidWorks® 2012 - Dynamic Library

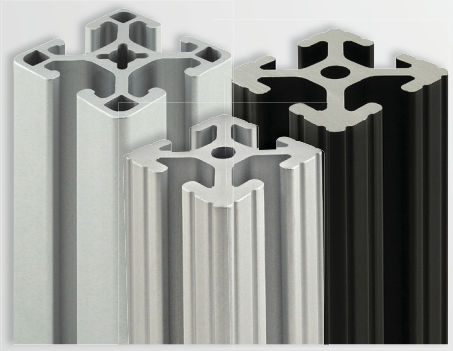
The 80/20 SolidWorks® Dynamic Library is a free single download of thousands of parts, including profiles, fasteners and accessories, as well as profile weldments. This simple download makes it easier for you to design, test, and experiment with your builds. We are continually adding drawing files, so be sure to check for updates at 8020.net.



3D CONTENTCENTRAL

3D Content Central® provides easy to find 2D and 3D file types for 80/20 profiles, fasteners and accessories. The files support a wide range of CAD packages. Users of SolidWorks® have the added benefit of a direct link to 3D Content Central.

CAD DIRECT



Free Streamlined Files

80/20 offers free streamlined files for T-slot, Ready Tube® and Quick Frame® profiles. Each profile series is downloadable in its own convenient file. The files are available in:

- **AutoCAD® - DXF – 2D**
- **SolidWorks® 2013 – SLDPRT**
- **Inventor® - IPT File Format**
- **SketchUp – SKP File Format**

Visit 8020.net to use all of 80/20's design tools!

80/20® Services

80/20 BUILDS

Time is critical in today's fast-paced world. 80/20 Builds assembly service gives you more time to focus on what you do best. We'll take your project from the design stage all the way through to completion, including the actual assembly.

It stands to reason that, on average, we can assemble your project in about a quarter of the time it takes someone who doesn't build with 80/20 day in and day out. Consider all the other projects and tasks that can be done in that time!

1 HOUR 80/20 BUILDER

80/20's experience with the product along with our specialized tools and large work area enable us to be the fastest and most efficient at building with 80/20.

4 YOUR TIME

We know there are occasions when space, personnel, or time constraints make it difficult to devote resources to assembling a project.

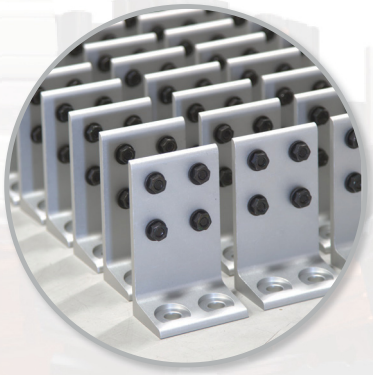
ADVANTAGE OF THE 80/20 EXPERIENCE

The 80/20 Builds service was created to help you increase your productivity. We have a team comprised of dedicated and experienced technicians who optimize designs, build projects and ship them safely and damage-free. Our tools and resources ensure precise assembly to your exact specifications.

THREE SERVICE OPTIONS

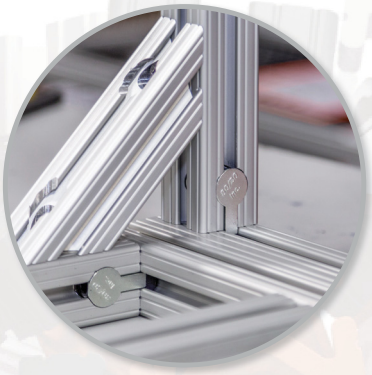
You have three service options to choose from with 80/20 Builds: preloading, subassembly, or full assembly.

PRELOADING



We prep your fasteners and plates with the required hardware for quick installation.

SUBASSEMBLY



We build your project into segments that can be easily and quickly assembled later.

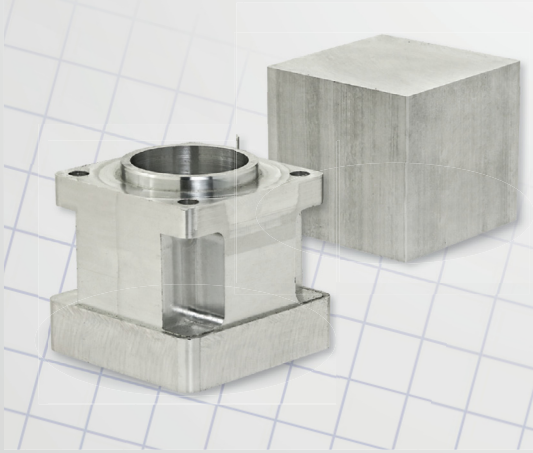
FULL ASSEMBLY

Your project is completely built, shipped, and ready to use when it arrives at your door.

CUSTOM MACHINING

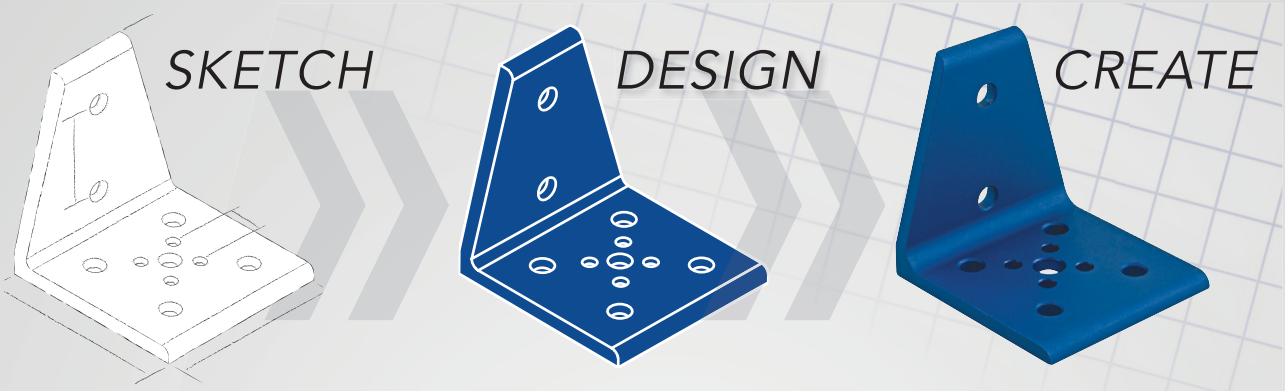
Our Custom Machine shop is another way 80/20 provides your solution from concept to creation. This in-house service means we can be your one-stop-shop for T-slot systems as well as custom parts, accessories, and attachments to complete your entire project.

Our precision in-house Custom Machine shop quickly makes adjustments or changes to any part in our catalog, saving you the headache involved in outsourcing these services. We can also make an entirely new piece completely customized for your needs. And if it's not a material we carry, we'll source it for you.



VAST STOCK OF PARTS

We offer over 200 in-stock structural shapes; 80/20 will make the custom bracket or mount you need to augment your order. Don't waste time and energy working with multiple vendors. We have the materials, personnel and equipment to provide your products with a quick turnaround and the high level of quality that comes with all 80/20 products and services.



NO PART TOO BIG OR TOO SMALL

We specialize in custom-machining aluminum; there are no minimum charges and no minimum runs. Our state-of-the-art equipment is set up for single parts or large quantities, all to the tightest of tolerances.

Contact a Design Technician today at 260.248.8030 for assistance with your Custom Machining project.

DID YOU KNOW?

Every year, 80/20 machines over 100,000 custom parts, panels and aluminum profiles.

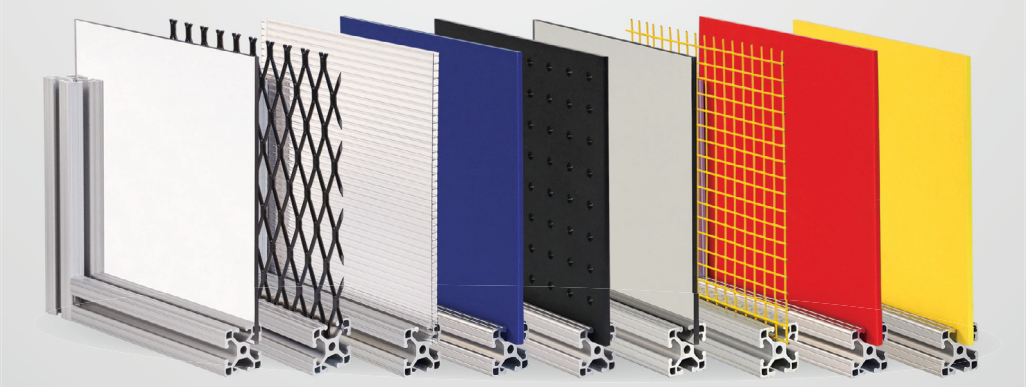
PANEL SHOP

80/20's in-house Panel Machine Shop is a service that provides you the total solution for your project needs. We stock a selection of over 100 varieties of plastic panels, aluminum plates, and wire mesh with thicknesses ranging up to half an inch. This huge supply means you won't have to wait on material or the machining; we do it all in one location.

We machine our panels in-house, saving you valuable time and money; you'll get your project fast and to your exact requirements.

VARIETY OF PANEL TYPES

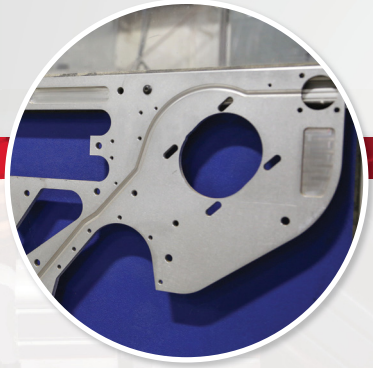
- Acrylic
- Polycarbonate
- PVC/Acrylic
- HDPE Pegboard
- Aluminum Composite
- Lite Aluminum Composite
- Expanded Metal
- Wire Mesh
- HDPE
- ESD
- AR Polycarbonate
- Recycled Polycarbonate
- Solid Aluminum Plate
- Diamond Tread Plate
- Laminated Tabletop
- Twin Wall Polycarbonate
- Expanded PVC
- Phenolic Resin
- ABS Haircell
- Thermoplastic Coated Wire Mesh



CUSTOMIZE YOUR PANEL

We have the equipment to take your design and create the custom shape, access point, door, or barrier your project may require. The results of this extensive in-house shop are finalized materials that are seamlessly incorporated into your application.

This is accomplished at the high level of quality we hold ourselves accountable to in all of our products and services. From the initial design stages through our hand-packing procedures, you'll receive your panel just as you ordered it and expect it – to your specifications and damage free.



PANEL SHOP MACHINING

- Cut to Size
- Custom Designs
- Engraving
- Lettering
- Recessing
- Perforating
- Notch for Hardware
- Much More!

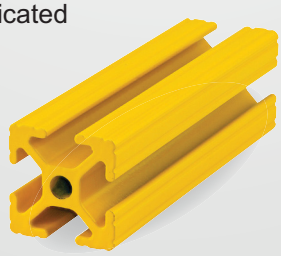
METAL FINISHING

Our in-house metal finishing capability is one of the several ways 80/20 is committed to being your one-stop-shop for T-slot projects. This service encompasses a range of options to provide you with fast turn times and consistent, high-quality, products.

Our standard finishing process here at 80/20 begins with the raw aluminum product; we machine the part, vibratory finish and/or sand it (depending on the item), and then move it into the anodize finishing process. It's worth noting that 80/20 is one of the only T-slot providers in the industry with in-house anodizing capabilities.

ALTERNATIVE PRODUCT FINISHES

We have invested in the resources to provide a high-quality product in a timely manner. Our metal finishing shop consists of dedicated personnel, equipment and space.



And we know that there are times you need an alternative finish for your product. Talk to a technician today; we also offer a range of special finishes from powder coating to electroplating and beyond.

FINISHING OPTIONS

- Mill
- Anodize
- Blasted
- Chromate
- Zinc Plating
- Powder Coat
- Electroplating

STANDARD MACHINING

80/20 has a wide range of standard machining services. These are cuts, drills and bores we make hundreds of times a day to your precise specifications. We have invested in top-of-the-line equipment and personnel to create a streamlined process for machining your products fast and accurately.

We have this down to a science; our large selection of standard machining services applies to all of our profiles, fasteners and accessories. We even have panel, wire mesh, and aluminum plate machining capabilities. This means high-quality, accurate products coupled with fast turn times.

DID YOU KNOW?

80/20 has over 500 standard machining services available to provide fast turn times.

CAPABILITIES FOR ALL SIZES

If you need one or one hundred parts machined, we have the capabilities to accommodate. Our equipment ensures precise cuts and drills so you receive your order just as you designed it. What's more, each part is visually inspected and measured for proper location and sizing of machining services.

CUSTOM PACKAGING

When you need something beyond 80/20's standard packing for your order, we offer a custom packaging service. This service accommodates your more detailed and specific requirements. From bubble wrapping each profile, using unmarked boxes or labeling parts per your special instructions, we will work with you to fulfill your packing needs.

FOR YOUR SPECIFIC NEEDS

A popular option is our part-tagging service. This is ideal for orders with several bars of varying lengths or different machining services, or for large quantities that you need labeled alphanumerically to match the bill of materials. The parts will be separated and packaged together by type and the labels will be clear and easy to read.

As with all 80/20 orders, our packing is to the highest of standards. No matter the unique details of your requirements, your shipment will be properly hand-packaged to ensure a damage-free delivery.

POPULAR CUSTOM PACKAGE OPTIONS

- Part-Tagging
- Bubble Wrapping
- Individual Part Packing
- Unmarked Boxes
- Kit Packaging
- Bar Coding

Shipping Schedule

Our standard shipping time is the best in the T-slotted profile business.

Consider the following when deciding whether to buy pre-cut or full length profiles:

- **Freight costs and delivery schedules**

Packages longer than 100" must ship via commercial carrier. Any package 100" or shorter can ship via UPS, which is usually substantially less expensive and has faster delivery schedules than commercial trucking.

- **Quality cuts and accurate lengths**

When you purchase pre-cut profiles, you can expect to receive quality cuts and accurate lengths, washed and packed for shipping.

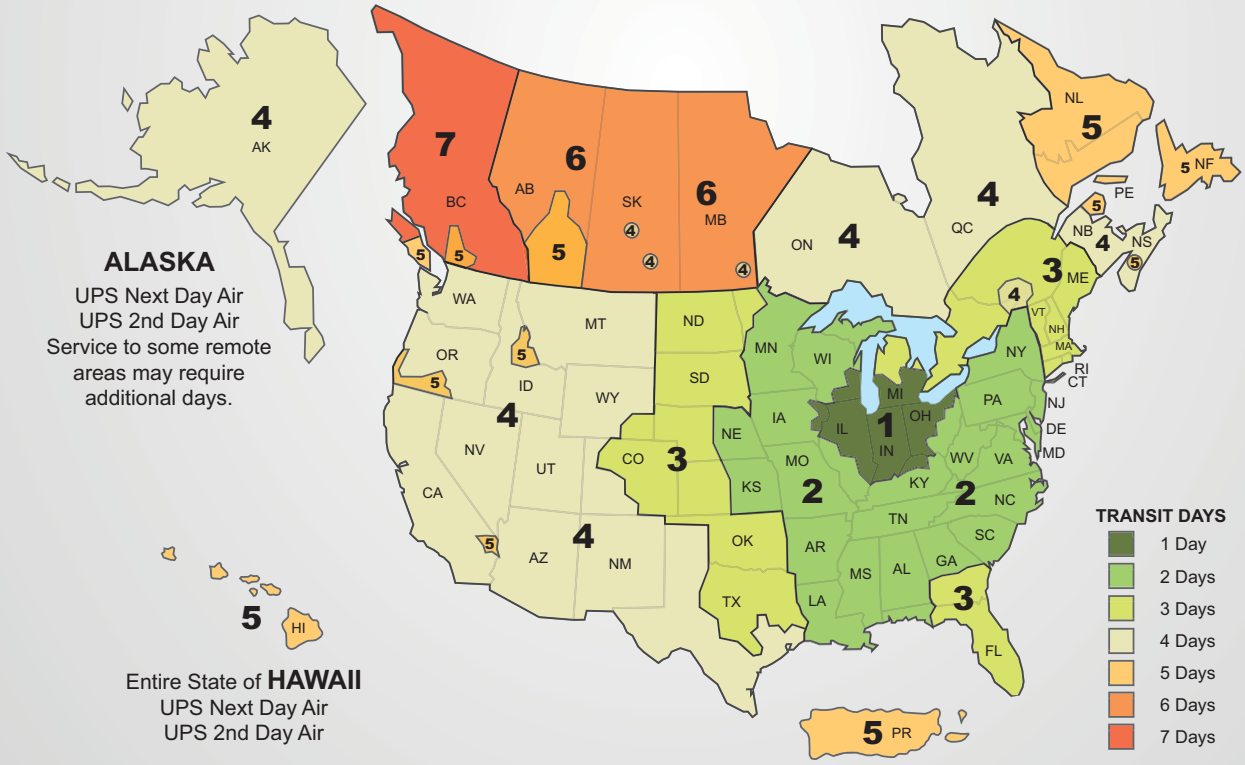
- **80/20® is centrally located for convenient UPS delivery from coast to coast**

Shipping Rate Information:

Most carrier rates are calculated based on weight. However, since most trailers reach their volume capacity before their weight limit, the important factor is the volume of the shipment. Standard rate classifications for 80/20® packaged profiles and panels start at rate class 60. This classification may vary due to the finished package size.

Aluminum Profile:
Freight Rate Classification: ≥ 60
Bill of Lading Description: aluminum profiles and parts

Plastic Panels:
Freight Rate Classification: ≥ 85
Bill of Lading Description: laminates in sheets



Ordering Information

Shipping Schedule

You need communication, commitment and timely delivery of your orders. Superior quality, customer service, and fast shipping are the foundation of our business so **we will always strive to ship your orders in less than our published timeframes.** Assuming that your order is ready for processing (including all drawings and worksheets) the shipping schedule chart outlines when you can expect your order to be shipped.

Order Type	In-House Processing Days
• Parts Only	2-4
• Cut to length T-slotted profiles (with or without parts) • Cut to length mill-finish structural shapes	2-4
• Parts, panels, and T-slotted profiles with standard machining in addition to cuts	7-9

These shipping times are for standard clear anodize orders. For the complete shipping schedule, including black anodize orders, visit 8020.net/shipping-information.

Preferred Carriers

To ensure timely and safe delivery of your products 80/20 works with preferred carriers. These carriers understand and have committed to our high level of quality and customer service. They make daily scheduled pick-ups. If you have a transportation company you prefer to use and they are not on this list, we will work with you to accommodate.

Less-Than-Truckload (LTL) Carriers:

- UPS Freight
- YRC Freight
- Old Dominion
- ABF Freight
- Conway (XPO)

Parcel Carriers:

- UPS Ground
- FedEx Ground
- FedEx Express

Damaged or Lost Shipments

UPS and Prepaid Truck Shipments:

Check your order immediately upon receipt. All damages must be noted on the packing slip and bill of lading. All shipping discrepancies must be reported to 80/20 Inc. within 14 days of receipt of your order. Keep all damaged goods for inspection.

Truck or Expedited Freight (when you select the carrier):

Check your order immediately upon receipt. All damages must be noted on the packing slip and bill of lading. All shipping damages, discrepancies and shortages must be reported to the carrier you selected within 7 days of receipt of your order. Keep all damaged containers and goods for your carrier to inspect. File your claim with your carrier for the damages at that time.

Return Policy

1. Contact your 80/20 distributor or 80/20 Inc. for an RGA (Returned Goods Authorization) packaging form.

2. Write the RGA number on the packing list AND shipping label of your return carton. Full credit is given for undamaged, unused stock parts.

3. Carefully wrap and pack all parts you're returning to prevent damage (and possible credit refusal) during shipping.

Terms and Conditions of Sale

1. ORDER PLACEMENT. All goods and services furnished by 80/20, Inc. ("80/20") are provided pursuant to these Terms and Conditions ("Terms and Conditions") whether provided following an order placed electronically, verbally, or on paper, whether the order is placed directly through 80/20 or through an 80/20 representative, and whether the order is placed following Buyer's review of 80/20's catalog or website, or following receipt of a Quotation only, or following the exchange of other documents (the catalog website Quotation and all other documents, hereafter, jointly, the "Quotation"). Acceptance by 80/20 of Buyer's order is expressly conditioned upon Buyer's acceptance of these Terms and Conditions, including those on the face of the Quotation, and any provisions of Buyer's order in conflict with these Terms and Conditions are expressly rejected. Buyer acknowledges that no representation or warranty other than those contained in this document have been made or relied upon. No additions or modifications shall be valid unless confirmed in writing by 80/20. 80/20 IS NOT BOUND TO FURNISH ITS GOODS OR SERVICES EXCEPT IN ACCORDANCE WITH THESE TERMS AND CONDITIONS.

2. PRICE/DELIVERY/DELAY. Prices for goods shall be those in effect on the date of invoice unless otherwise provided by the Quotation or agreed to in writing by 80/20. Unless otherwise provided on the face of the Quotation or agreed by 80/20 in writing, price and delivery terms shall be F.O.B. shipping point. Unless otherwise agreed in writing, 80/20 will select the route and manner of shipment, reserves the right to make delivery in installments when necessary, to invoice each installment separately, and to expect payment for each installment within 80/20's selling terms. All risks of loss or damage shall pass to Buyer at the place and time such goods are placed into the possession of the carrier or shipper, in accordance with the previously referenced F.O.B. shipping point term. Buyer shall be responsible for obtaining and paying for insurance to cover any loss to Buyer. Buyer shall pay 80/20 for the contract price in the event of loss of the goods. If Buyer fails to accept delivery according to the agreed upon delivery schedule, 80/20 may cancel the then remaining balance of the order. Such cancellation, if elected by 80/20, shall be in addition to, and not in lieu of, any other rights or remedies which 80/20 may have at law or equity. Prices are good for only quantities indicated. If shipment or any other act or condition affecting payment for the goods or any part of them shall be delayed on account of Buyer, payment shall be due as if shipment had been made, a reasonable storage charge may be made, and such storage shall be at the risk of Buyer. 80/20 shall not be liable for any direct, indirect, consequential, special, or incidental losses or damages to Buyer or to any third parties resulting from 80/20's delay in shipment regardless of cause, including but not limited to those causes set forth in the Force Majeure section of this document.

3. PRODUCT VARIANCE FROM PHOTOS. 80/20 attempts to provide accurate photographs of the products it offers for sale, but there may be some variation between the photographs and the actual products. Buyer may return any product if the variance is unacceptable to Buyer. Buyer must submit its request for return based on the product variation within thirty (30) days after receipt of the goods.

4. ACCEPTANCE. Goods furnished or services performed by 80/20 will be deemed to have been finally accepted thirty (30) days after receipt by Buyer, unless rightfully rejected within such period by written notice to 80/20, setting forth all of the defects upon which the rejection is claimed. Claims for factory damage or shortages shall not be considered unless made in writing within thirty (30) days after receipt of the goods or services and accompanied by reference to our bill of lading and invoice numbers. Buyer's claims for damage or shortage in transit must be filed by Buyer against carrier. Defective goods shall be held for 80/20's inspection or disposition. Buyer must note damaged goods or the appearance of probable damage with the freight carrier and on the relevant freight documents at the time of receipt.

5. 80/20 PROPERTY. All photographs, samples, descriptions, drawings or intellectual property provided by 80/20 to Buyer shall remain the property of 80/20 and shall only be used by Buyer to market 80/20 products to third parties. Buyer shall include in any materials incorporating 80/20 intellectual property, all copyright and trademark notices provided by 80/20. All such property shall be returned to 80/20 upon demand and any license created hereunder, implied or otherwise, is terminable at will by 80/20 and is hereby expressly terminated pursuant to Section 18 upon termination of this agreement.

6. RETURN POLICY. Buyer shall have no right to return any goods furnished by 80/20. 80/20 may, in its sole discretion, authorize Buyer to return goods. 80/20 may authorize the return of goods without charging a restocking charge, but in most cases, 80/20 will only authorize the return of goods subject to a restocking charge, the amount of which will depend on the type of goods being returned. The restocking charge shall be deducted from the amount refunded to Buyer.

7. TAXES. Prices do not include any federal, state or local taxes. Any applicable excise, import, sales, use or similar taxes, whether federal, state, provincial or local, and any transportation and other charges shall be the responsibility of and be paid by Buyer and, if paid by 80/20, Buyer agrees to reimburse 80/20 for any such payment and further agrees that 80/20 may add any such payments to the purchase price of the goods.

8. PAYMENT/CREDIT/SECURITY. Payment shall be due prior to shipment unless adequate credit remains on an account in good standing. All orders received are subject to credit approval. Buyer agrees to submit from time to time to 80/20 those items reasonably requested in order to establish or update Buyer's credit. 80/20 shall be entitled to charge interest on past due accounts at a rate of 1.5% per month (18% annually). Whenever 80/20, in good faith deems itself insecure, it may, without prejudice or waiving any other rights or remedies it may have at law or equity, cancel any outstanding orders with Buyer and/or hold production/shipment of any unfilled orders; modify or revoke its extension of credit to Buyer; and take any other steps permitted by law and necessary or desirable to secure 80/20 with respect to Buyer's payment of goods and services furnished or to be furnished. Buyer will pay 80/20's actual costs of collection, including but not limited to court costs, litigation expenses, and reasonable attorney's fees, incurred for collection of any delinquency. Title to the goods shall remain with 80/20 until Buyer receives physical possession of the goods and the goods are fully paid for by the Buyer. Buyer shall have no right of offset against amounts owed to 80/20.

9. QUALITY POLICY. 80/20 is dedicated to providing its products free of actual defects in material and workmanship. 80/20 will replace or repair, at 80/20's option, any product which, upon 80/20's inspection is found to have a defect in material and/or workmanship provided such defect is reported to 80/20 in writing within one (1) year of the date of the shipment from 80/20's factory ("Quality Policy"). 80/20 in no event shall be liable for indirect or consequential damages arising out of the use of 80/20 products. Components purchased by 80/20 from others for inclusion by 80/20 shall be warranted only to the extent of the guarantee or warranty, if any, made by the supplier of said component. No warranty is made by 80/20, express or implied, that 80/20 products as used in a customer's design and specifications are fit for that customer's specific purpose. Services performed by 80/20 will be conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the industry currently practicing under similar conditions. As an independent contractor of Buyer, 80/20 will provide evaluation, advice, and guidance to Buyer, but Buyer recognizes that 80/20 is a technical contractor and not a professional consultant.

APART FROM THE ABOVE QUALITY POLICY, THERE ARE NO WARRANTIES, EXPRESS, IMPLIED, OR STATUTORY, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF.

80/20 expressly reserves the right to substitute materials in the products described in the catalogs and any supplements thereto; however, this shall not apply to special order products and/or custom products where 80/20 is advised in writing of specific material requirements and agrees in writing to comply with the requests for such specific materials. Any and all warranties shall be construed and enforced under the Laws of the State of Indiana.

10. INDEMNIFICATION. Buyer shall defend, indemnify and hold 80/20 harmless from and against any and all claims, liabilities, loss, costs, damage or expense (including reasonable attorneys' fees) of any kind or nature whatsoever relating to the performance by 80/20 hereunder, including without limitation, claims made for property damage or personal injury (including death), whether such claims are premised on contract or on tort (including, without limitation, strict liability). This indemnity provision shall not apply where such damage or injury is attributable solely to the negligence of 80/20, its employees or agents.

11. FORCE MAJEURE. 80/20 will not be liable for any delay in the performance of its obligation under this Quotation or for any damages suffered by the Buyer by reason of such delay, when such delay is directly or indirectly caused by or in any manner arises from: fires; floods; accidents; riots; acts of God; governmental interference; embargoes; strikes; labor difficulties; shortages of labor, fuel, power, materials or supplies; transportation delays; any existing or future laws or acts of the Federal or any State government (including specifically, but not exclusively, any orders, rules or regulations issued by any official or agency or any such government) affecting the conduct of 80/20's business; or any other cause or causes (whether or not similar in nature to any of those specified above) beyond 80/20's control, including but not limited to modifications to the fabricating specifications requested by the Buyer subsequent to commencement of production by 80/20.

12. NO WAIVER. The failure of 80/20 upon knowledge of any default or violation by Buyer of any of the Terms and Conditions of this Quotation, or any sales agreement entered into hereafter, to enforce its rights or remedies shall not be construed as a waiver of such default or violation, or of any provision hereof, or of any of its rights or remedies.

13. LIMITATION ON LITIGATION/ATTORNEY FEES. Any controversy or claim of Buyer arising out of or related to any transaction with 80/20 must be commenced within one (1) year after the cause of action has accrued. 80/20 shall be entitled to reimbursement of all costs and expenses, including reasonable attorneys' fees, from the Buyer relating to any lawsuit in which 80/20 prevails in any amount or on any claim.

14. ENTIRE AGREEMENT/LAW AND FORUM/SEVERABILITY. Except as otherwise agreed in writing or if another writing incorporates these terms thereby making these terms supplemental to such writing, this constitutes the entire agreement between 80/20 and Buyer, superseding all prior Quotations and understandings, oral or written. All such previous communications are hereby abrogated and withdrawn, and no stipulations, representations or agreements by 80/20, or its officers, agents, or employees shall be binding upon 80/20 unless reduced to writing and attached to and incorporated by reference herein, and no local, general, or trade custom shall alter or vary the terms hereof. Any questions, disputes, controversies, or litigation between 80/20 and Buyer, including but not limited to disputes concerning the validity, interpretation, or effect of the Quotation, or interpretation and enforcement of the rights and obligations of the parties hereunder, shall be governed by the laws of the State of Indiana and the exclusive venue for resolving any such questions, disputes, controversies, or litigation shall be a state or federal court located in Allen County, Indiana. If any provision of this Quotation is determined invalid under applicable law, such invalidity shall be limited to such provision without invalidating the remainder of the other Terms and Conditions hereof; and if any provision of this Quotation is found to be ambiguous or in conflict with any other provision of this Quotation, such ambiguity or conflict shall be resolved in the manner which provides the greatest protection and limitation of liability to 80/20.

15. INSURANCE. 80/20 will maintain Workers' Compensation insurance coverage at such levels as are required under the laws of the State of Indiana. 80/20 will purchase and maintain comprehensive general liability insurance against claims for personal injury or death or damage to property which may arise out of, or result from, 80/20's performance of the services in such amounts as 80/20 maintains in its ordinary course of business.

16. LIMITS OF LIABILITY. 80/20 will not be liable for any punitive damages or legal fees or any special, indirect, or consequential damages (including but not limited to loss of use or loss of profit) or fees which arise out of the performance of the services by 80/20. 80/20 and Buyer agree that absolutely no action arising out of the services may be brought by either party more than one year after substantial completion of the services. The entire liability of 80/20, or its officers, directors, agents, or employees, and Buyer's exclusive remedy for performance or nonperformance of the services shall be the adjustment or correction of the services by 80/20. If after repeated efforts, 80/20 is unable to adequately perform, Buyer shall be entitled to recover a pro-rata credit for the sums actually paid for the defective portion of the services.

17. TERMINATION OR CANCELLATION. Either party may terminate the services and all obligations arising under the proposal for the reason of the failure by the other party to comply with its obligations upon 30 days prior written notice to the other party. In the event of such termination, Buyer will pay to 80/20 all amounts which are due and payable to 80/20 for the services performed through the date of such termination. In addition, in the event the services are terminated as the result of the failure of Buyer to perform its obligations, Buyer will pay to 80/20 a termination charge of 20 percent of the cost of the remaining services to be performed by 80/20.

Where Do I Begin?

You have a project in mind and now just need to narrow down your product options. 80/20 provides a wide range of profiles and parts to accommodate all of your requirements. To help you decide which items work best for your needs, we've broken down products into a few main categories:

- Profiles
- Fasteners
- Panels & Doors
- Floor to Frame
- Add-On Components
- Stanchions
- Finish Your Frame
- Structural Shapes

Things to Consider

Typically, it's easiest to start by deciding on your profile series. Think about the end purpose of your application to help you narrow down your search for the profile that fits your needs. 80/20 offers profile series in both the fractional and metric family that accommodate the entire scale of small, medium, and large builds.

Your profile should be determined by deciding on the scale, weight, strength, surface (smooth, grooved), open T-slot requirements, color, finish, and shape that you need.

Tip: Use an isometric grid graph (see page 959) to help with your design; draw a sketch and list your exact specifications.

Keep It Compatible

Throughout planning your project, you'll want to be sure all of the subsequent products, such as your fasteners and accessories, are compatible with the profile series you've chosen. Just look for the appropriate icon, or filter by series when shopping.

COMPATIBILITY KEY

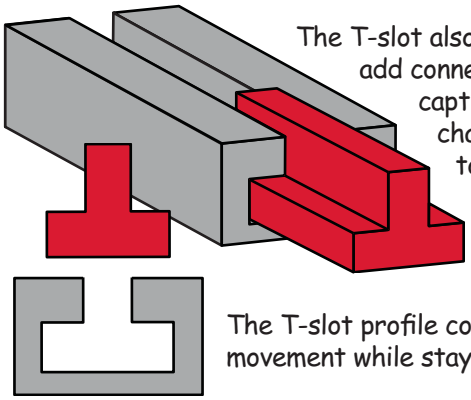
F Fractional	M Metric	30 30 Series
10 10 Series	20 20 Series	40 40 Series
15 15 Series	25 25 Series	45 45 Series
RT Ready Tube®	QF Quick Frame®	

Introduction to Aluminum Framing

You have a project or design in mind and now you need to turn that idea into an actual build. Your first step is to choose your profile; T-slotted aluminum profiles, Ready Tube, or Quick Frame. If you would like to head directly to information on Ready Tube, flip to page 63, or to page 65 to read about Quick Frame. Let's begin with the T-slot profile.

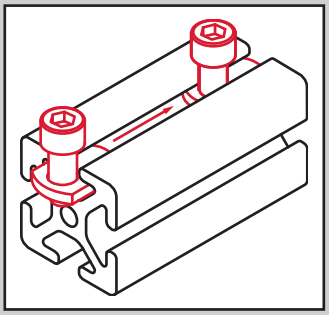
The T-slot Concept: Built-in Modularity

T-slot aluminum profiles offer several benefits. The shape of the profile creates modularity, meaning it is easily assembled and reassembled to conform to evolving needs.



The T-slot also provides the ability to add connections and join profiles to captivated ends. This allows you to change your design without having to start from scratch and also enables easy expansion and retraction of your build for modifications down the road.

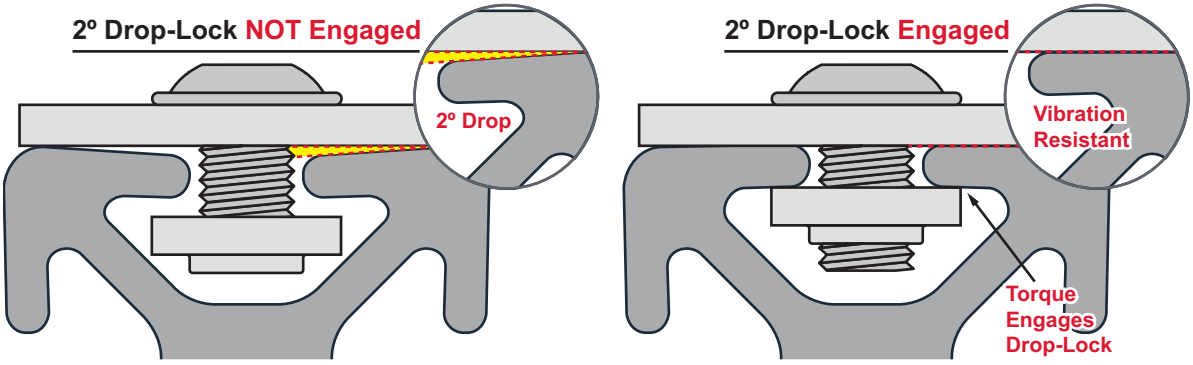
The T-slot profile concept is designed to allow movement while staying secure within the T-slot.



Connections can be made anywhere along the axis of the profile creating an infinite number of mounting points and eliminating incremental positioning.

The T-slot Profile 2° Drop-Lock

Another important attribute of T-slot aluminum profiles is the strong connection made between profiles. 80/20's T-slot aluminum profiles include a 2 degree drop-lock feature for most profiles, which enables connections to remain vibration resistant and strong. 80/20 offers a wide variety of joining options to fit your specific needs (for an overview on fastening products flip to page 206).



Advantages of T-slot Aluminum Profiles

Moving on from the T-slot concept, let's consider the benefits of aluminum. There are several advantages to T-slot aluminum profiles. Some of the biggest are:

- Strong
- Lightweight
- High strength-to-weight ratio
- Resilient
- Modularity
- Easily machined

All 80/20 profiles come standard with a clear anodize which helps prevent oxidation and corrosion while providing a matte finish.

The Battle of Aluminum vs Steel

Think about the fact that, volume for volume aluminum is one third the weight of iron, steel, copper or brass. Yet it has yield strength of 35,000 psi, which means it is comparable to A36 steel carbon (frequently used in applications such as equipment and machinery supports as well as building frames). Furthermore, aluminum is resilient and can flex under loads or reshape itself after the shock of impact.

80/20 T-slot Aluminum

Modularity is just a part of the many benefits aluminum offers to those looking for an alternative to steel and iron. Other benefits:

- Weighs less than steel
- Corrosion-resistant
- No welding required
- Costs less than steel
- Strength similar to steel
- Machining not required

Aluminum VS Steel

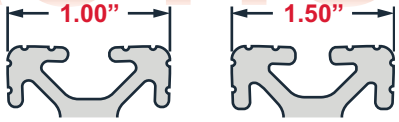
Welded Steel Frame

For the skilled welder, steel can be a viable option but for many it's not an option for many reasons:

- More time and labor
- Welding required
- Machining required
- More expensive
- Needs painting
- One fixed design

Profile Family Types

FRACTIONAL

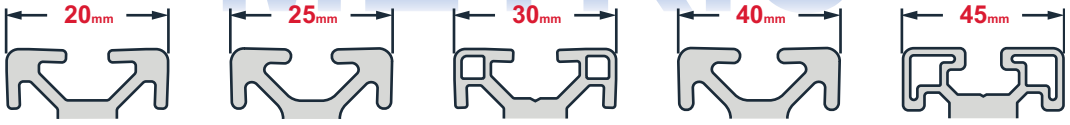


*Profiles are not shown to scale.

The fractional T-slot family uses an inch measurement system (imperial). 80/20 currently offers 57 profiles in fractional units with two standard series; the 10 series and the 15 series. 10 series profiles are based on a 1 inch standard while 15 series profiles are based on a 1.5 inch standard.

Align-a-grooves, featured on our 10 series and some of our 15 series T-slot profiles, aid in aligning and squaring corners and joints during assembly. Align-a-grooves are not available in metric profiles.

METRIC

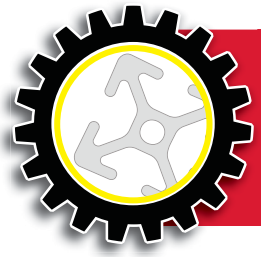


*Profiles are not shown to scale.

The metric T-slot family is measured in meters or millimeters (mm). 80/20 currently offers 51 profiles in metric units with five series; 20, 25, 30, 40 and 45. The dimensions of the metric profiles each coincide with the series; for instance, 20 series profiles are based on a 20mm standard, 25 series are based on a 25mm standard, 30 series profiles are based on a 30mm standard and so on.

After you have decided which measurement system you are going to use, you'll want to decide on a specific profile series. Think about the weight and strength you will need, as well as the shape and open T-slots you want available.

Consider your application and its purpose to help you narrow down your search for the profile that fits your need. 80/20 offers profile series in both the fractional and metric family to accommodate small, medium, and large-scale builds. A prototype project is an example of a small-scale build while a desk or workstation is an example of a medium-scale build. Profiles used for structural framing would be an instance of a large-scale project.



Need to Know

80/20 currently offers both metric and fractional T-slotted profiles with 108 profiles available across seven series types.

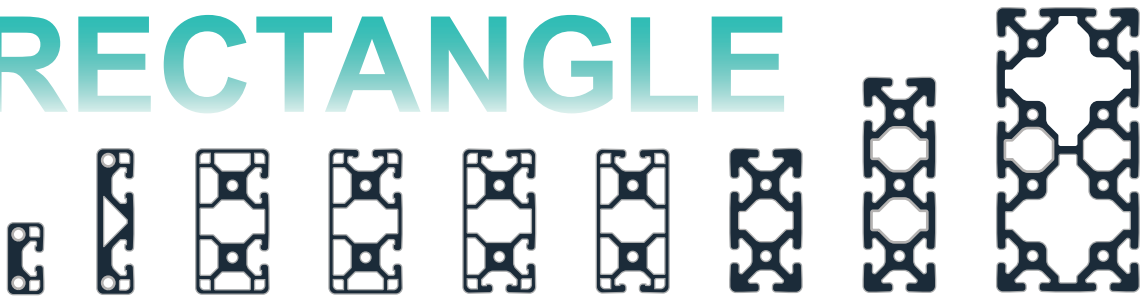
The Shape of a Profile

Once you have determined a series that matches the scale of your build, you are ready to choose the shape of your profile. The shape of the profile affects certain properties such as aesthetics and open T-slots. The available shapes are square, rectangle, angled, and radius.

SQUARE

In both the fractional and metric measurement families, 80/20 offers six different square profile shapes. This variety gives you choices to accommodate appearance, accessories and parts. For medium to large-scale applications consider a square profile with eight T-slot openings to allow a multitude of connection points for the addition of profiles and accessories. Some square profiles also include the capability of a pressurized center cavity.

RECTANGLE



Between the fractional and metric measurement families there are nine rectangle profile shapes and all work well for joining other profiles, parts and accessories. Most rectangular profiles have the capacity for a pressurized center cavity. The twelve-slot rectangle profile is perfect for large-scale purposes, such as load-bearing applications, and offers the most mounting and joining options.

RADIUS & ANGLE

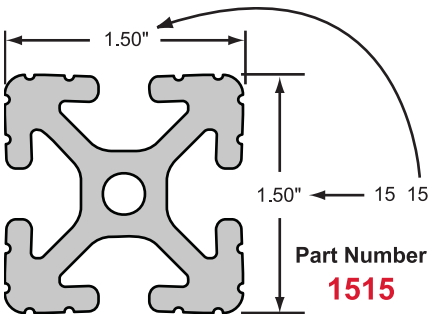
Angled and radius profiles come with 2 open T-slots and are frequently used for panel mounting and exhibits due to their versatility and sleek appearance. The rounded shape of radius profiles works well as hand rails.

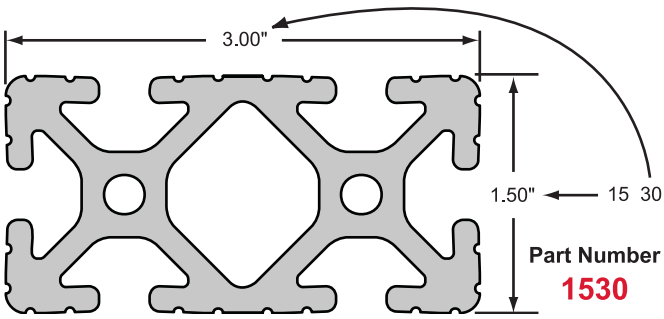
To recap, T-slot profiles are extremely versatile, modular and strong. You will first want to choose either the fractional or metric measurement system, and then decide on the specific profile series. From there, narrow down the shape that works best for your build. If you're still not sure which T-slot aluminum profile is right for your project, contact 80/20 at 260.248.8030 or info@8020inc.com for assistance.

Part Number Concept & Identification

Most fractional and metic T-slot profiles have part numbers that directly coincide with the profile's physical measurements. Fractional profile part numbers contain four characters. Metric profile part numbers contain six characters, which relate to the profile's series and dimensions. This series part-numbering concept is explained in more detail below.

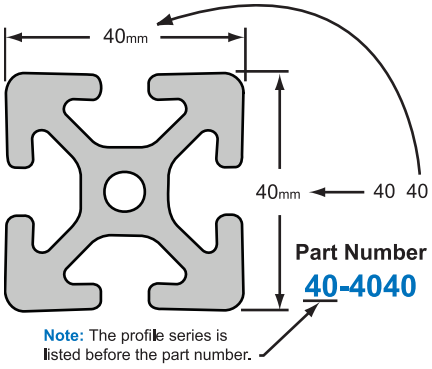
Fractional Profile Naming Standards

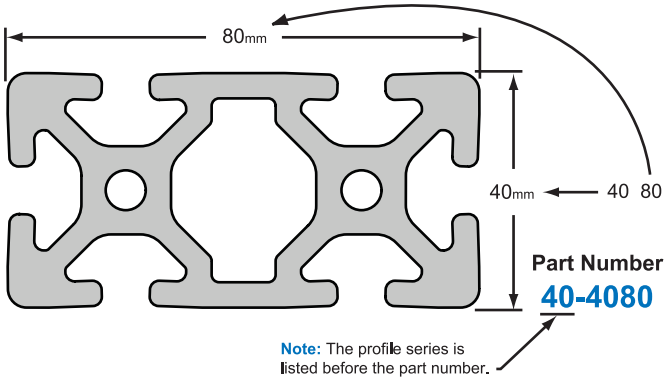




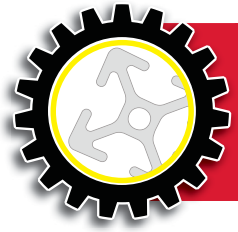
Example: 15 series profiles always measure .75" from the outside edge of the profile to the center of the T-slot.

Metric Profile Naming Standards





Example: 40 series profiles always measure 20.00mm from the outside edge of the profile to the center of the T-slot.



Basic Concept

The dimensions of your profile usually spell out its part number.

Black Anodize

80/20 offers over 1,000 black anodized profiles and parts for your custom designs; these are stocked in-house to provide fast and easy access. We use architectural and organic anodizing processes and both meet Military Spec 8625.

You'll find that black anodize makes your projects look sleek while also providing functionality. Black anodize is ideal for low reflective projects, photo booths, military applications, vision systems and anywhere you want to add a polished appearance.

Need to Know

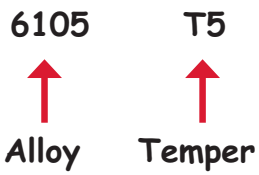
When ordering black anodized products with machining services, these areas will be exposed, meaning not black. If you would like your profiles or parts completely black, including the machined areas, we can accommodate. Contact us for more details.

Why 6105-T5* Aluminum Alloy?

All of 80/20's T-slot profiles are made of 6105-T5* alloy, an aluminum extrusion alloy that is a metal mixture which includes other elements such as copper, magnesium, iron, silicon or zinc.

Certain properties such as strength, machinability and corrosion resistance are influenced by the choice of alloy and temper.

Alloy 6105* with a T5 temper has better machinability and strength than 6063-T6.



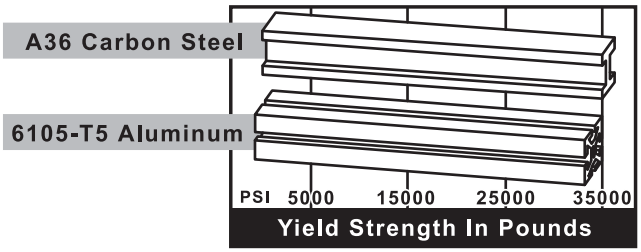
Aluminum Profile Alloys: Number and Characteristics	Tensile Strength - ksi* Ultimate minimum	Yield minimum
6105-T5* (80/20's Alloy)	38.00	35.00
6063-T6	30.00	25.00

Figures based on material thickness of 0.125" to 1.00"
From The Aluminum Extrusion Manual, published by The Aluminum Association and the Aluminum Extruders Council.

Material Strength Specifications

Minimum Yield Strength In Pounds

- 80/20's 6105-T5* alloy yield strength of 35,000 psi compares to A36 carbon steel's yield strength of 36,000 psi.
- Volume for volume, aluminum weighs about 1/3 as much as iron, steel, copper, or brass.

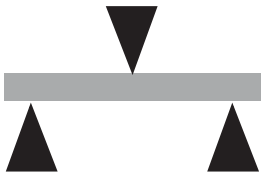


* Or comparable

Simple Beam Deflection Calculations

Formula A

$$\frac{L^3 \cdot W}{48 \cdot E \cdot I} = D$$



This formula will yield worst case deflection for a beam supported at both ends with the load centered over the span.

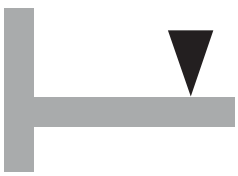
Formula B

$$\frac{5L^3 \cdot W}{384 \cdot E \cdot I} = D$$

This formula will yield worst case deflection for a beam supported at both ends with the load evenly distributed over the span.

Formula C

$$\frac{L^3 \cdot W}{3 \cdot E \cdot I} = D$$



This formula will yield worst case deflection for a beam fastened at one end and cantilevered horizontally with the load applied at the end of the beam.

Example Using Formula A:

Using the 1515 T-slot profile, a length of 30.00 inches, and an applied force of 50 pounds, you should find the approximate beam deflection to be .011 inches. Using the 40-4040 T-slot profile, a length of 762mm, and an applied force of 222.40 Newtons, you should find the approximate beam deflection to be .21mm.

Formula Reference:

L = Length in Inches
W = Load in Pounds
I = Moment of Inertia
E = Modulus of Elasticity
D = Deflection in Inches

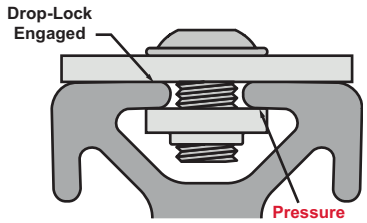
T-Slot Profile Specifications

FRACTIONAL		METRIC
35,000 p.s.i. (min)	Yield Strength	241.1 N/mm² (min)
38,000 p.s.i. (min)	Tensile Strength	262.0 N/mm² (min)
A5 minimum 10%	Elongation	A10 minimum 8%
10,200,000 lb/in.²	Elasticity E	70,326.5 N/mm²
Rockwell approximately E-88	Hardness	Brinell approximately 75 HB
.004" per 1 inch of width	Flatness	0.1mm per 25.4mm of width
0.0125 inches per 1 foot of length not to exceed 0.118 inches over 20 feet of length	Straightness	0.32mm per 304mm of length, not to exceed 3mm over 6.1 m of length
Per 1 foot of length not to exceed .25 degree and total twist over 20 feet of length not to exceed 1.5 degrees	Twist	Per 304mm of length not to exceed .25 degree and total twist over 6.1m of length not to exceed 1.5 degrees

Note: Extrusion conforming to DIN 17 615 specifications. Unless otherwise specified, all profiles will have etch and clear (MIL-A-8625F) anodizing with depth of .0004 inches (0.010mm) and surface hardness of approximately 250 HV (anodized profiles should not be welded because of toxic fumes).

Torque Specifications

The tables below show the amount of torque in foot-lbs. and newton meters required to activate the 2 degree drop-lock feature for t-slotted profiles. Nut and bolt combination is preloaded when tightened to the minimum torque rating.



Fractional T-slotted Profiles

Part Number	Fastener Description	Tested Profile	Minimum Torque Ft-lbs.	Maximum Torque Ft-lbs.

75-3404	M6 x 10mm BHSCS & Economy T-Nut	25-2525	5	8
25-3896	25 Series Anchor Fastener Assembly	25-2525	4	23
25-3895	25 Series End Fastener Assembly	25-2525	5	23

The estimated torque calculations in this chart are offered as a guide only. Use of this content by anyone is the sole responsibility of that person and they assume all risk. Due to many variables that affect the torque-tension relationship like human error, surface texture, and lubrication the only way to determine the correct torque is through experimentation under actual joint and assembly conditions.

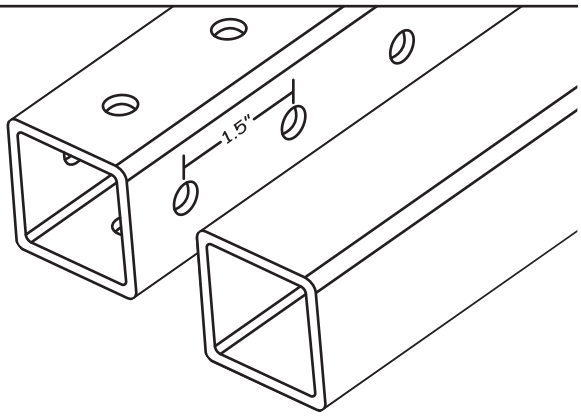
Introduction to Ready Tube®

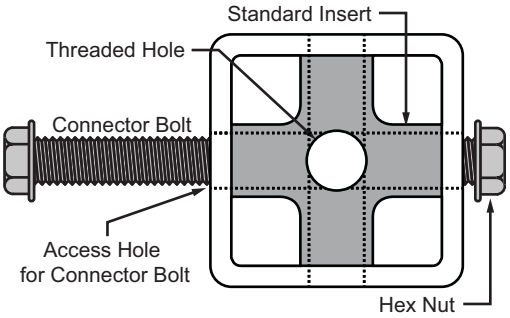
Ready Tube is an alternative to steel tubular framing; it is lightweight yet strong and durable. Ready Tube is also corrosion resistant, easy to assemble and cost-effective. Ready Tube is appropriately named; it is ready to use without the need for additional machining.

With or Without Pre-Drilled Holes

Ready Tube is available with or without pre-drilled holes. Profiles with pre-drilled holes have 1.50" centerlines between holes, which enables quick and easy connections without the need for machining.

Ready Tube also comes without pre-drilled holes which make it perfect for customized connections and readily attaching to existing builds. In addition, dirt and water have difficulty getting into these profiles and they are easily cleaned, making it a good fit for applications in laboratories and the food industry.





How Ready Tube Works

The most commonly used fastener for Ready Tube is the **Standard Tube Insert** which requires only a wrench to connect. It includes a connector bolt, hex nut and insert that goes inside the Ready Tube profile and is accessed by the pre-drilled holes. 80/20 does offer additional fasteners for Ready Tube; for more information flip to page 419.

Ready Tube Connects in 4 Steps

Advantages of Ready Tube

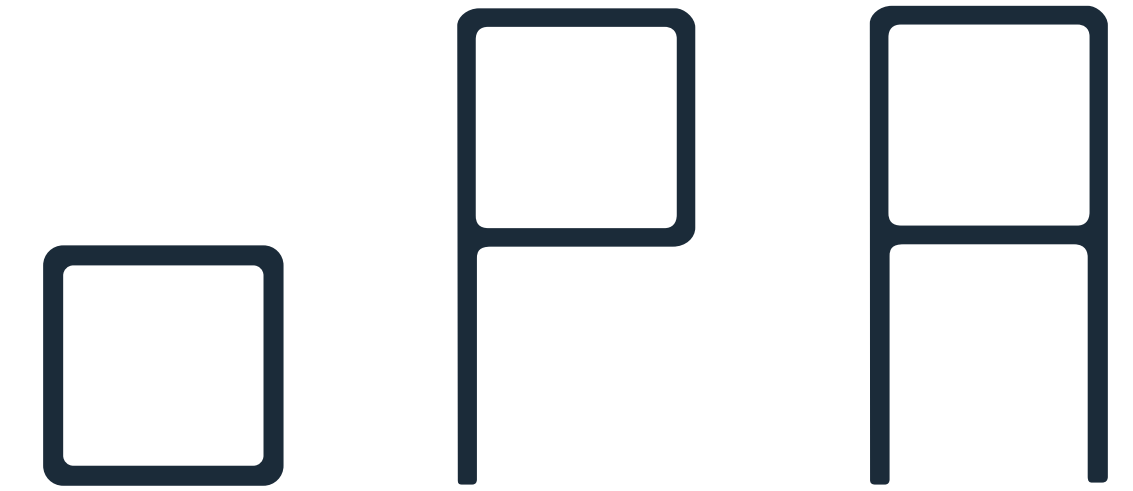
Ready Tube, similar to the standard 80/20 T-slotted profile, is made of an aluminum alloy which offers several advantages:

- Strong
- Lightweight
- High strength-to-weight ratio
- Resilient
- Corrosion-resistant

Keep in mind that Ready Tube profiles come standard with a clear anodize finish which prevents oxidation and corrosion while providing a matte finish.

The Shapes of Ready Tube

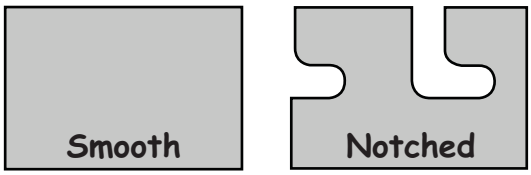
The properties of Ready Tube make it perfect for evolving and changing applications. It works well in builds such as workstations, tables, carts, flow racks, and material handling shelving and racks. When using Ready Tube in your build you have 3 main profile options; square, P-tube, and A-tube.



Square Ready Tube profiles are easy to clean and aesthetically appealing, while P-tube profiles have flanges that work well for holding panels. A-tubes are available with or without notches and are perfect for applications such as gravity racks or material handling shelves.

Need to Know

Ready Tube is available with or without pre-manufactured holes and is a great solution for material handling applications.

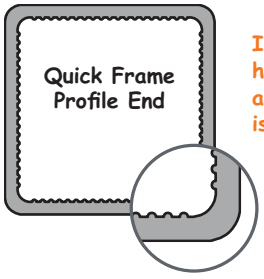


Introduction to Quick Frame®

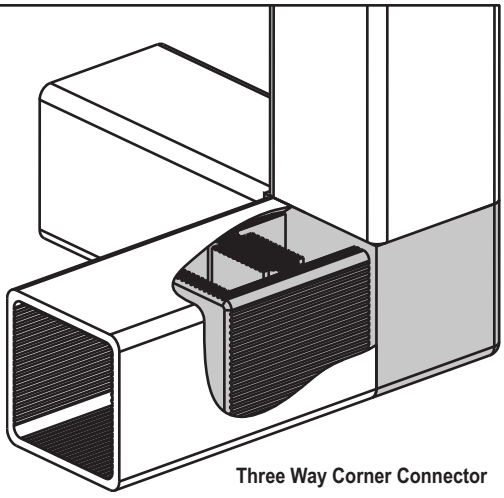
Quick Frame is an alternative to steel tubular framing and wood construction. It is simple to use, lightweight and can help reduce your product cost. Quick Frame requires few parts for assembly and connects with just one tool. It is a boltless method that fastens with nylon tube inserts. This means that Quick Frame does exactly what its name implies; connects quickly to form light yet sturdy builds.

How Quick Frame Works

Quick Frame profiles are designed specifically to work with Quick Frame connectors; they have built-in ridges that bite into the connector to create tension without the use of hardware. The profiles connect quickly and easily using only a soft-faced mallet to form light-duty yet sturdy builds.

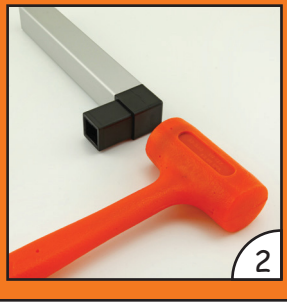


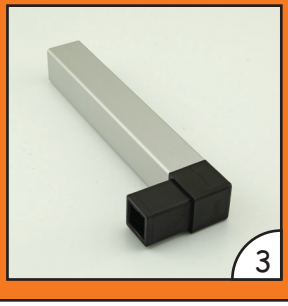
Internal grooves in the Quick Frame profile hold connector in place without the use of additional hardware. A soft-faced mallet is all that is required for assembly.

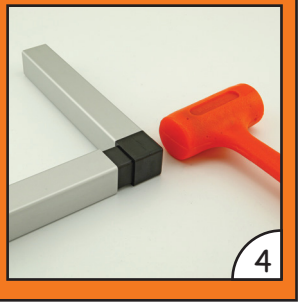


Three Way Corner Connector

Quick Frame Connects in 4 Steps







Quick Frame: Strong, Light-Duty Solution

Quick Frame is made of aluminum but is even lighter than most other framing materials such as wood and PVC. This means that Quick Frame retains structural rigidity making it perfect for light-duty applications such as shelving and storage solutions, barrier and splash guards, enclosures, and retail displays.

Added Benefits of Quick Frame

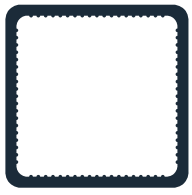
Quick Frame is easily incorporated into preexisting projects and frames already built with T-slotted aluminum profiles. Keep in mind, too, that Quick Frame is anodized which means that it is corrosion resistant and aesthetically appealing. The nylon connectors do not degrade and can even be submerged in water without rusting.

The Shapes of Quick Frame

There are 3 main shapes when it comes to Quick Frame; square, flanged, and twin flanged. Square profiles hinder dirt and debris buildup and are easy to clean while single flanged profiles are perfect for building doors or adding panels. Twin flanged profiles hold panels in place for vertical applications such as enclosures.

Within both the flanged and twin flanged shapes you can choose from either a single flange, a right angle flange or a double flange, allowing you to find the specific Quick Frame profile perfect for your build.

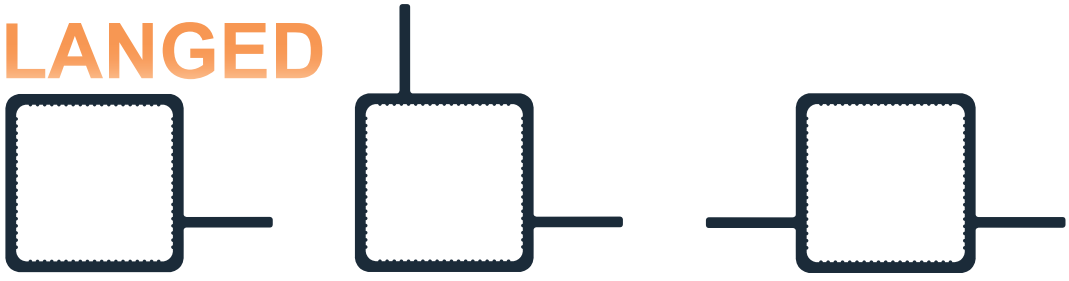
SQUARE



Need to Know

Quick Frame is a light-duty alternative to its heavier steel counterpart, with options for flanged ends to hold guarding.

FLANGED



TWIN FLANGED

1.00” X 1.00” Smooth Surface T-Slotted Profile - Four Open T-Slots

1010-S Profile

1010-S is a 1.00” x 1.00” fractional 10 series square T-slot profile with four open T-slots, one on each 1.00” face. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 1010-S profile is compatible with all 10 series fasteners. The four open T-slots enable access from any direction and are useful for mounting accessories.

1012 Profile

1012 is a 1.00” x 1.00” fractional 10 series quarter round T-slot profile with a .750” radius curved back and two open T-slots, one on each of the 1.00” profile faces. The profile has align-a-grooves to assist in aligning connecting profiles. The 1012 profile is compatible with 10 series fasteners. This profile allows structures or large panels to be easily placed into the open T-slots while lending itself to workstations, displays or exhibits.

1.00” X 0.50” T-Slotted Profile - Single Open T-Slot

1050 Profile

1050 is a 1.00” x 0.50” fractional 10 series rectangular T-slot profile with one open T-slot on one 1.00” face. The profile has align-a-grooves to assist in alignment when connecting profiles. The 1050 profile is compatible with 10 series fasteners. It is a thinner profile that connects easily to flat surfaces and works well as a supporting structure or spacer for mounting accessories such as handles, door tracks, rails, valves or sensors.

1.50” X 1.50” Lite Smooth Surface T-Slotted Profile - Single Open T-Slot

1501-LS Profile

1501-LS is a 1.50” x 1.50” lite fractional 15 series square T-slot profile with one open T-slot on one 1.50” face. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 1501-LS profile is compatible with 15 series fasteners. The three closed faces on this profile provide a clean, aesthetic look and lends itself to furniture, displays, desks, trade show booths, or retail kiosks.

25-2503 Profile

25-2503 is a 25mm x 25mm metric 25 series square T-slot profile with three adjacent open T-slots, one on three 25mm faces. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 25-2503 profile is compatible with 25 series fasteners. The closed face on this profile provides a clean, aesthetic look while also having the capability to mount additional profiles, parts, and accessories.

25mm X 25mm T-Slotted Profile - Two Opposite Open T-Slots

25-2504 Profile

25-2504 is a 25mm x 25mm metric 25 series square T-slot profile with two opposite open T-slots, one on two 25mm faces. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 25-2504 profile is compatible with 25 series fasteners. The placement of the T-slots allow support structures or panels to be easily placed into them while maintaining a continuous surface, lending itself to projects such as guarding, furniture or displays.

25mm X 25mm Quarter Round T-Slotted Profile - Two Open T-Slots

25-2527 Profile

25-2527 is a 25mm x 25mm metric 25 series quarter round T-slot profile with an 18.75mm radius curved back and two open T-slots, one on each of the 25mm profile faces. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 25-2527 profile is compatible with 25 series fasteners. This profile lends itself to workstations and displays because panels or other support structures can be easily placed in the T-slots allowing a continuous surface and aesthetic appearance.

40-4040-Lite Profile

40-4040-Lite is a 40mm x 40mm lite metric 40 series square T-slot profile with four open T-slots, one on each 40mm face. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 40-4040-Lite profile is compatible with all 40 series fasteners. This profile lends itself to machine guards, enclosures, work benches, or displays. The four open T-slots enable access from any direction and are useful for mounting accessories.

40mm X 80mm Lite T-Slotted Profile - Four Adjacent Open T-Slots

40-4084-Lite Profile

40-4084-Lite is a 40mm x 80mm lite metric 40 series rectangular T-slot profile with four adjacent open T-slots, two on one 80mm face and one on each 40mm face. The profile is smooth, which makes it resistant to dirt and debris buildup while also being easy to clean. The 40-4084-Lite profile is compatible with 40 series fasteners. The closed face on this profile provides a clean, aesthetic look while the center cavity of the profile can be pressurized up to 1.034 N/mm^2 (150 psi), lending itself to work spaces, machine guards and displays.

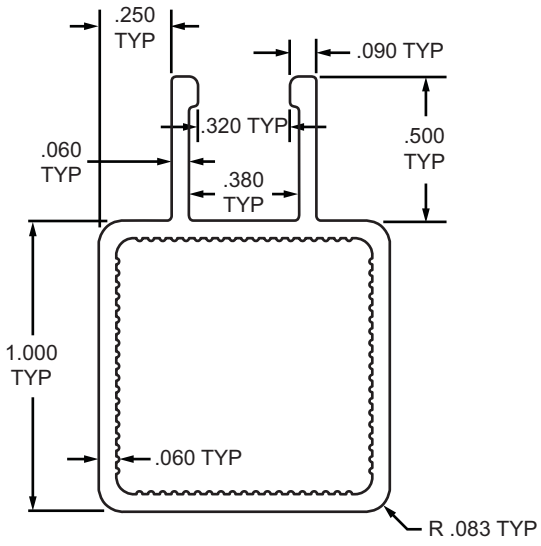
9025 is a 1.00” x 1.00” Quick Frame profile with right angle double 0.5” twin flanges and a grooved interior used to hold nylon connectors into place. The profile has a smooth surface for a sleek appearance and allows for easy cleaning. The positioning of the twin flanges makes the profile perfect for light-weight applications requiring paneling such as enclosures, guarding, storage, and shelving solutions.



Part No.	Series	Stock Length	Material	Alloy**	Finish	Moment of Inertia	Surface Area	Yield Strength	Modulus of Elasticity	Weight

Introduction to Fastening Methods

There are several options when choosing your fastening method. The intent of this section is to give an overview of points to consider as well as a brief summary of fastening options. While the variety may seem overwhelming, you can narrow down your selection based on properties of your desired fastener.

Keep in mind that in most instances, there is no "one right way" or "one right answer" when choosing your method. It will depend on personal preference, circumstance, application, design and purpose.

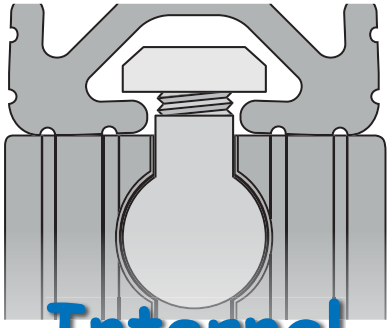
Internal Fasteners

Anchor Fastener	End Fastener	Central Connector	Hidden Corner Connector
			45 Degree Supports	Structural Pivots	Flat Plates	Brackets & Gussets

External Fasteners

Fastening Method Types

As a way to simplify your decision-making process, it's easiest to categorize fasteners into two main groups; internal fasteners and external fasteners. Most of the fastening connections offered by 80/20 fall into one of these two groups and each group has unique attributes and properties.

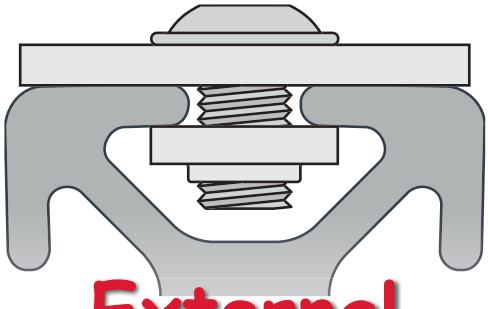


Internal

Internal connections create strong bonds between profiles because in most cases the fastener is machined into the profile. They are easy to assemble, require few parts and are simple to work into your design.

Internal Benefits

- Fastener recessed in T-slot
- Fewer parts
- Easy to assemble
- Easy to incorporate
- Hardware typically included
- Hidden connections available
- Options for infinite positioning
- Typically will not affect design area



External

External connections mount to the outside of the T-slot, strengthen connection points, and are easy to implement into the application. Most external connections are reconfigurable and can be mounted anywhere along the T-slot.

External Benefits

- Mount to T-slot
- Usually no machining required
- Options for infinite positioning
- Easy to implement
- Reconfigurable connections
- Ability for variable angles
- Strengthen connection points
- Assemble with simple hardware
- Options for connecting more than two profiles

Visit Online for More

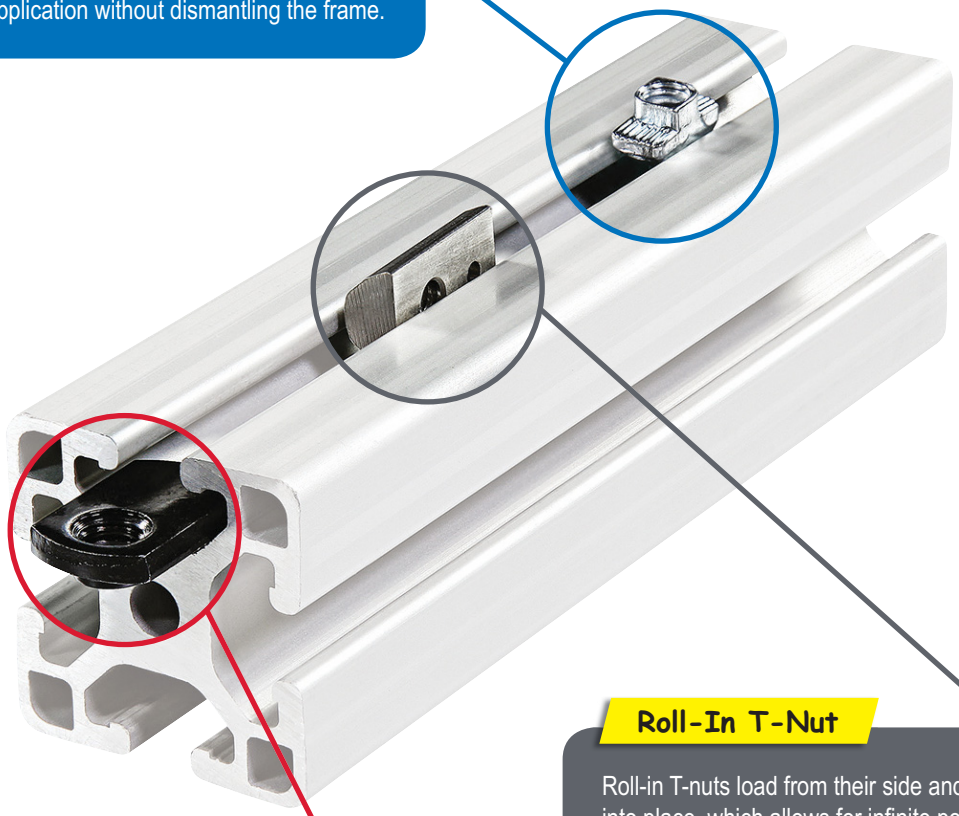
T-Nut Types

80/20 offers a wide variety of hardware with options in size, material, shape, thread alignment, and installation method. Three popular types of T-nuts are slide-in, drop-in, and roll-in.

Drop-In T-Nut

Drop-in T-nuts load from anywhere on the profile, making them perfect in instances where the ends of the profiles are captivated and you want to add to your application without dismantling the frame.



Roll-In T-Nut

Roll-in T-nuts load from their side and spin into place, which allows for infinite positioning along the T-slot. They can be used even when profiles are captivated. Roll-in T-nuts come in several variations, including self-aligning options as well as features to hold the T-nut in place for easy positioning.

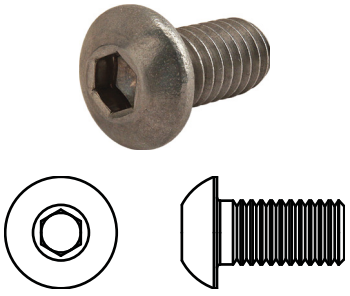
Slide-In T-Nut

Slide-in T-nuts load from the end of the profile and are available in several configurations including a centered or offset thread, and material and finish options.

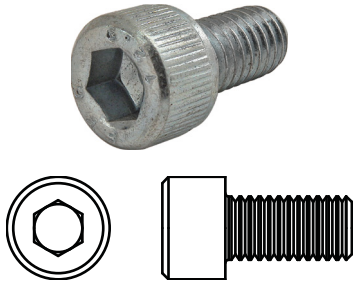
Hardware Options

80/20 offers a wide variety of bolt fastening options. Some of the most frequently used are Button Head, Socket Head, Flanged Button Head, Flat Head and Low Head.

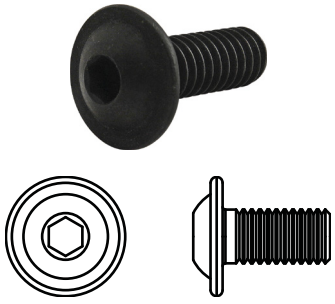
Button Head (BHSCS)



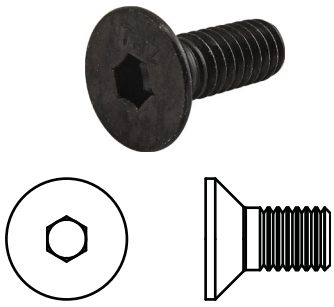
Socket Head (SHCS)



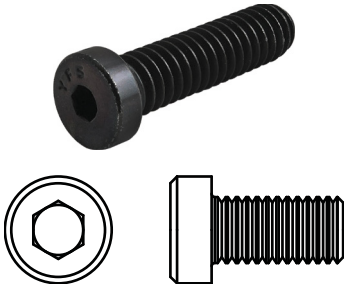
Flanged Button Head (FBHSCS)



Flat Head (FHSCS)



Low Head (LHSCS)



Need to Know

Possible hardware materials include: Black Zinc, Bright Zinc, Blue Zinc and Stainless Steel.

Ready Tube® Fasteners 101

80/20 offers several fastening options for Ready Tube profiles. While the most common is the Ready Connector Kit, there are also additional internal and external connection methods. Because Ready Tube profiles have pre-drilled holes, the connection methods do not require machining.

Only need a wrench!

Ready Tube Connects in 4 Steps

Standard Insert Kit

The Standard Tube Insert Kit includes all of the hardware you will need to easily assemble your project. This method is used for 90 degree connections when the end of the mounting profile is exactly .750" of an inch from the first hole centerline.

Extended Insert Kit

The Extended Tube Insert Kit also includes all of the hardware you will need to easily assemble your project. This kit is used in instances when the end of the mounting profile is not exactly .750" of an inch from the first hole centerline.

Roll Pin

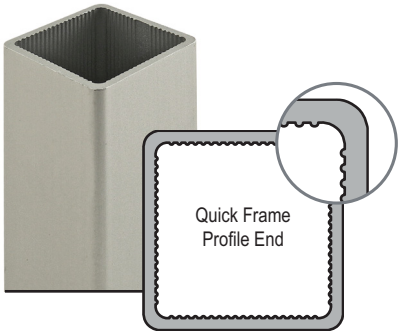
The roll pin is commonly used with the standard tube insert and is an internal connection method for Ready Tube. It provides a smooth, clean finish and eliminates the need for protruding hardware when used with Ready Tube connector kits.

Compatible with Additional 15 Series Fasteners

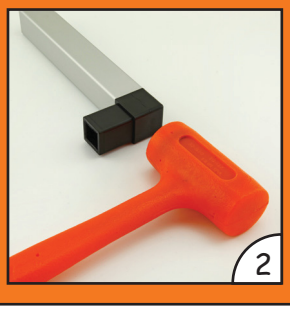
80/20 corner brackets, gussets, and flat plates can also be used to make connections between Ready Tube profiles. All of these connection methods are external, meaning that they are easy to use, reconfigurable, and mount directly to the profile.

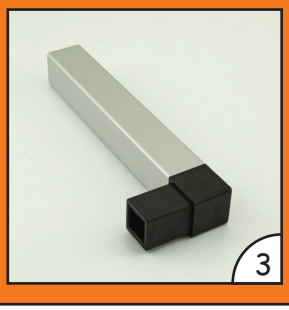
Quick Frame® Fasteners 101

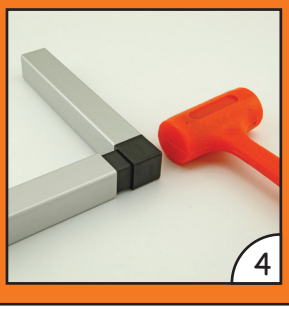
80/20 Quick Frame connectors are made of black or gray nylon and used with a Quick Frame Profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. The profiles connect quickly and easily using only a soft-faced mallet to form light-duty yet sturdy builds.

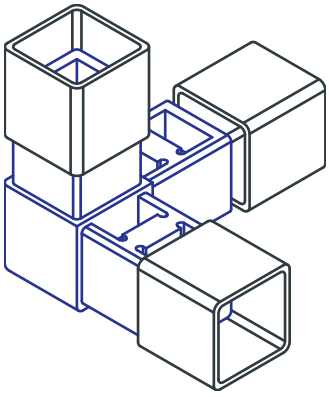


Quick Frame Connects in 4 Steps









No Machining, No Additional Hardware

80/20 Quick Frame connectors require no machining or additional hardware for assembly. This fast and efficient method is perfect for lightweight and cost-effective applications that still require a sturdy and secure connection. Quick Frame connectors also do not degrade and can even be submerged in water without deteriorating.

Variety of Fastening Options

80/20 has a variety of Quick Frame fastening options that enable connections between multiple profiles (up to eight using just one connector) as well as options to join profiles at varying angles. 80/20 also offers base connectors for projects that will be attached or mounted to any flat surface or T-slot profile. Use a soft faced mallet to install Quick Frame connectors (see page 914).

Part Description:

The standard anchor fastener assembly is comprised of a socket head cap screw, cam, and T-nut. It is one of the strongest internal fastening methods, offering a long-lasting connection. The anchor fastener provides infinite positioning along the mating profile's T-slot, allowing a large degree of adjustability. The anchor fastener provides 90 degree, flush, vibration resistant connections, especially convenient where space restrictions apply. This connection method requires a counterbore machining service on the mounting profile. **Additional Information:** Cams are available separately (without the socket head cap screw and T-nut) for instances where you want to create your own custom assembly.

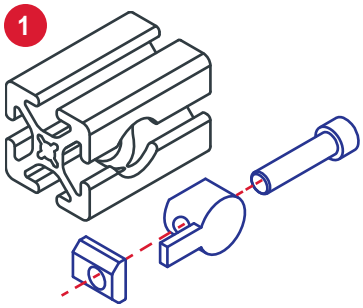
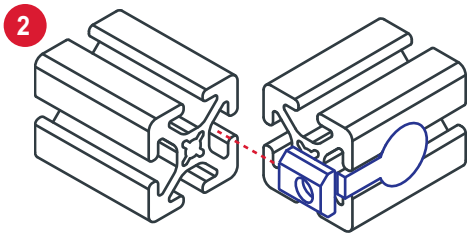
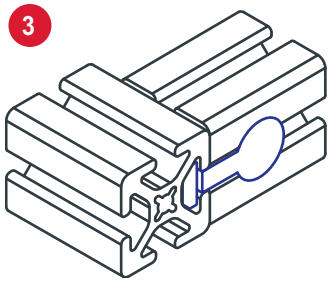
Anchor Fastener Assembly







Part Description:

The double anchor fastener assembly is comprised of two socket head cap screws, two cams, and a double T-nut. This design doubles the contact between the fastener and mating profile, making an extremely strong connection. The fastener provides infinite positioning along the mating profile's T-slot, allowing a large degree of adjustability. The double anchor fastener provides 90 degree, flush, vibration resistant connections, especially convenient where space restrictions apply and is used for profiles with open T -slots opposite each other. 80/20 recommends the double anchor fastener for non-column loaded supports to add extra strength. This connection method requires a counterbore machining service on the mounting profile. **Additional Information:** Cams are available separately (see page 214) for instances where you want to create your own custom assembly.

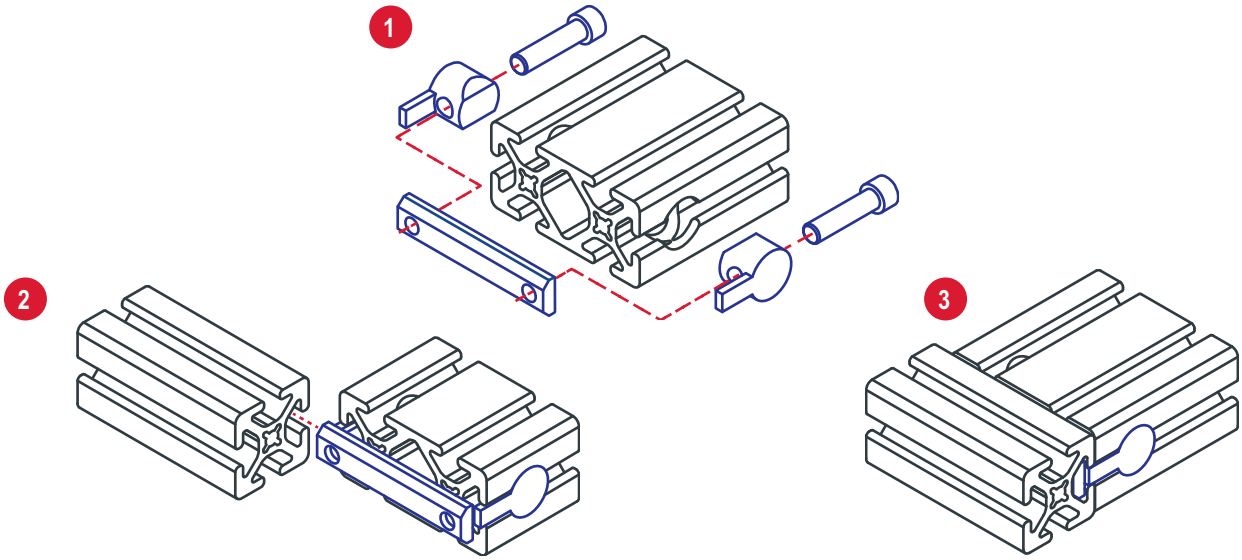
Long Double Anchor Fastener Assembly



Part Description:

The butt fastener assembly is comprised of a bolt and two cams. The butt fastener connects profiles end-to-end and provides a clean, flush connection, especially convenient where space restrictions apply. The butt fastener can also be used to connect shorter bars together where logistics or space make it difficult to maneuver longer profiles. This connection method requires a counterbore machining service on each profile.

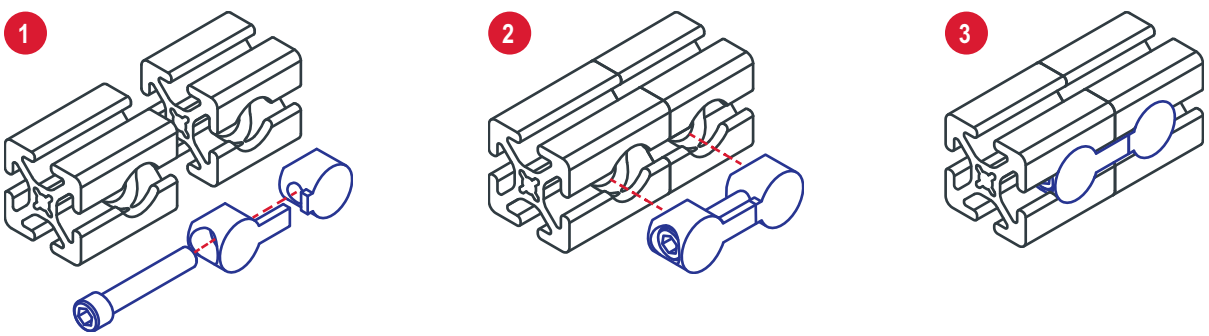
Butt Fastener Assembly



Standard End Fastener

Part Description:

The standard end fastener assembly is comprised of a button head socket cap screw and wing clip. The end fastener provides a fixed, 90 degree, moderate-strength connection that is completely hidden. The winged tabs of the clip prevent the mating profile from rotating. This connection method requires two machining services; an end tap on the mounting profile and an access hole in the mating profile in order to reach the screw head. **Additional Information:** Wing clips are available separately (without the button head socket cap screw) for instances where you want to create your own custom assembly.

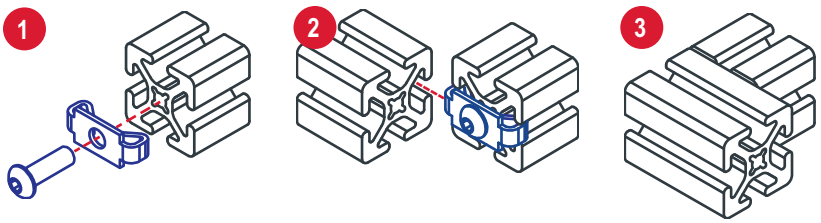
Standard End Fastener Assembly



Part Description:

The single tab end fastener assembly is comprised of a button head socket cap screw and a single tab wing clip. The single tab end fastener provides a fixed, 90 degree, moderate-strength connection that is completely hidden. The single winged tab is used for closed face, radius and angled profiles; the winged tab prevents the mating profile from rotating while the straight end is flush with the mounting profile. This connection method requires two machining services; an end tap on the mounting profile and an access hole in the mating profile in order to reach the screw head. **Additional Information:** Wing clips are available separately (without the button head socket cap screw) for instances where you want to create your own custom assembly.

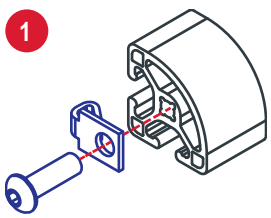
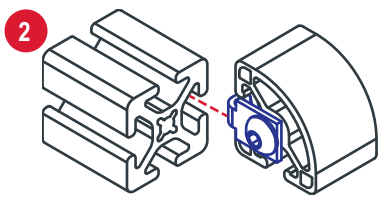
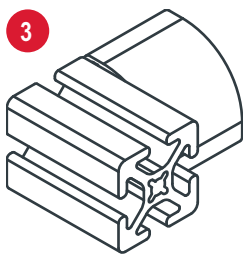
Single Tab End Fastener Assembly







Double End Fastener

Part Description:

The double end fastener assembly is comprised of two button head socket cap screws and a double wing clip. It provides a completely hidden, fixed, 90 degree connection. The winged tabs of the clip prevent the mating profile from rotating. The double end fastener is used with larger profiles and speeds up project assembly time by replacing the need for two end fasteners. It requires an end tap service (creating two parallel through holes) on the mounting profile and two access holes in the mating profile in order to reach the screw heads. **Additional Information:** Double wing clips are available separately for instances where you want to create a custom assembly.

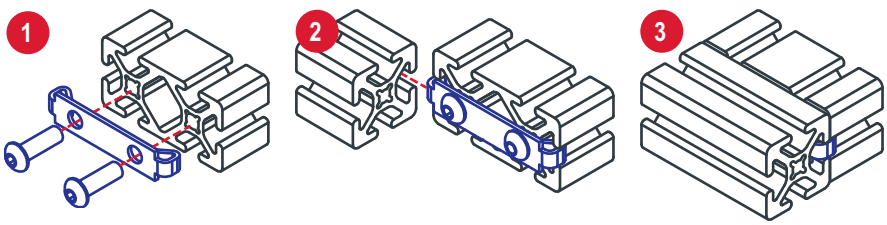
Double End Fastener Assembly



Part Description:

The hidden corner connector provides a 90 degree hidden corner connection. The corner connector comes with set screws that allow for quick, easy connections. This connection can be between the inside of two profiles or between the inside of one profile and the outside of the second profile. The hidden corner connector does not require any machining, making it a cost-effective fastening option.

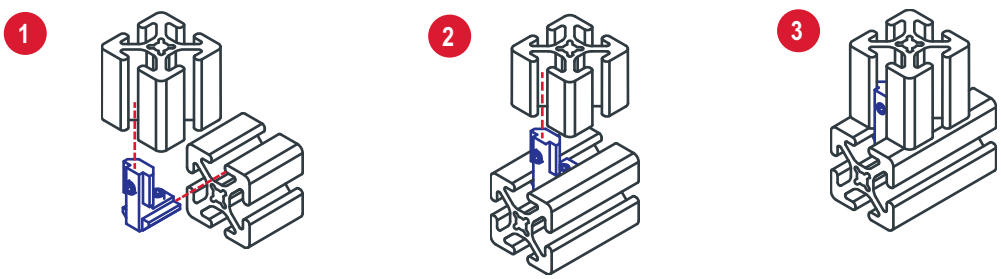
***The suggested tool to tighten the included hardware is a 4mm hex wrench.

Hidden Corner Connector Assembly

Inside-Outside Connector Shown



Miter Connector

Part Description:

The miter connector creates strong, internal connections ranging from 90 degrees to 180 degrees. A miter connection reduces rotation between the profiles. This connection requires that both profiles have a miter cut machining service as well as counterbores in both the mounting and mating profiles.

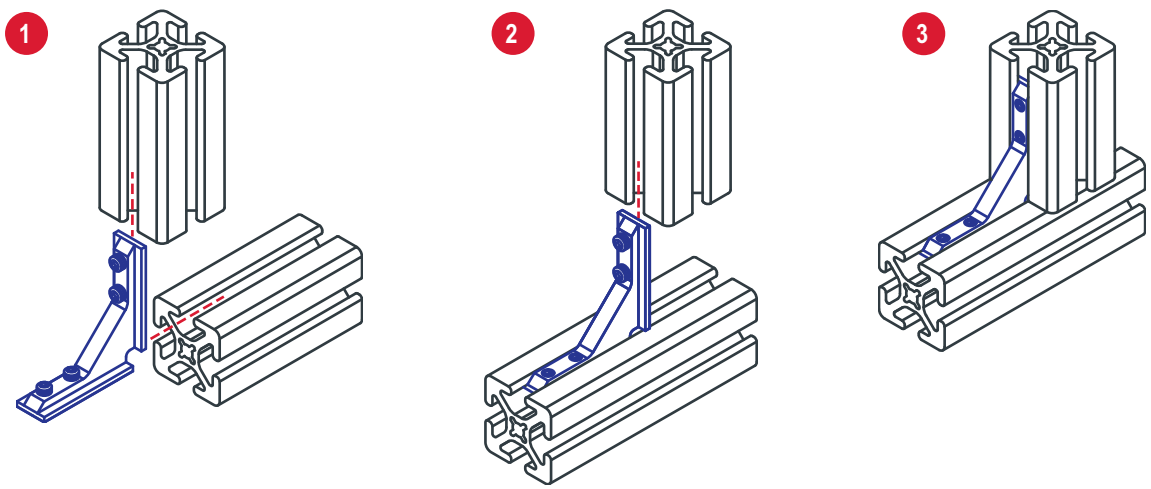
90 Degree Inside Corner Connector Assembly



Central Connector

Part Description:

The central connector is an assembly comprised of a cam, conical set screw, spring or o-ring, and T-stud. It is a strong internal fastening method, offering a long-lasting connection. The central connector can be used when profile ends are captivated and it provides infinite positioning along the mating profile's T-slot, allowing a large degree of adjustability. The central connector is a 90 degree, hidden, aesthetic connection. This connection method requires a central connector profile milling machining service.

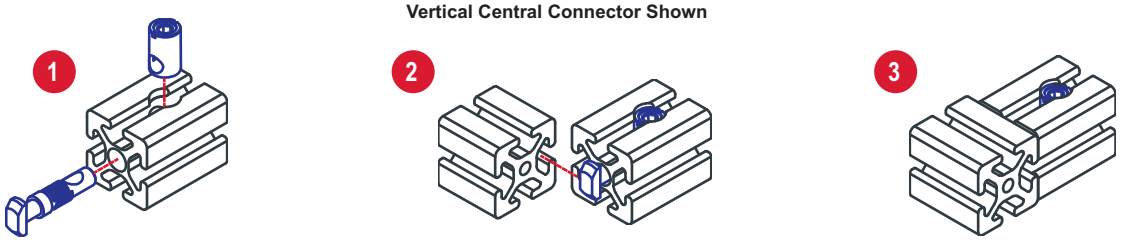
Central Connector Assembly

Vertical Central Connector Shown



Part Description:

The bolt connector is an assembly connection providing an internal, long-lasting fastening method. The bolt connector loads from the side or end of the profile and forms a 90 degree connection. This fastening method requires only a drill through machining service to the mounting profile.

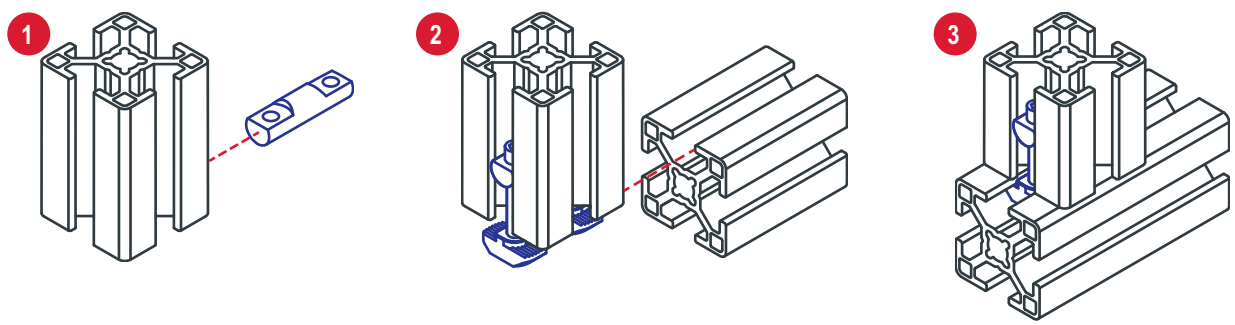
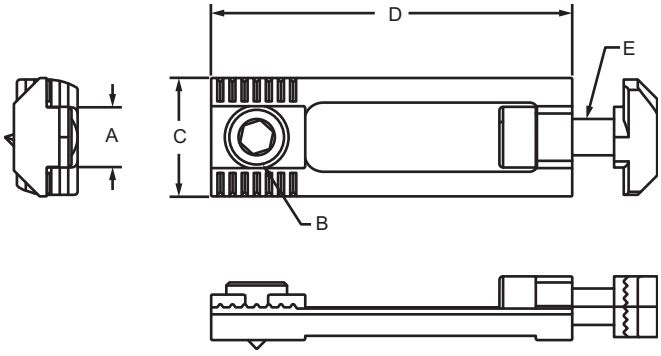
Bolt Connector Assembly

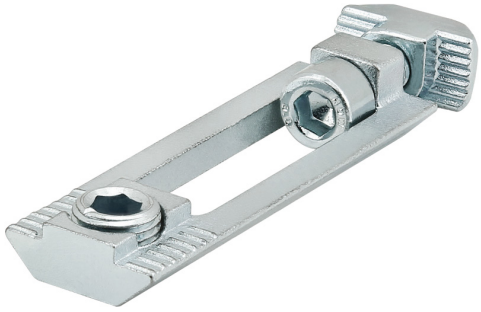


Milling Connector

Part Description:

The milling connector provides a strong, internal fastening method that requires no profile machining. It allows infinite positioning along the mating profile and can be used even when the mating profile end is captivated. The point of the set screw bites into the bottom of the T-slot profile, making it a secure connection. The milling connector can be used in pairs.





Part No.	Series	Material	Color	A	B	C	D	E	Weight

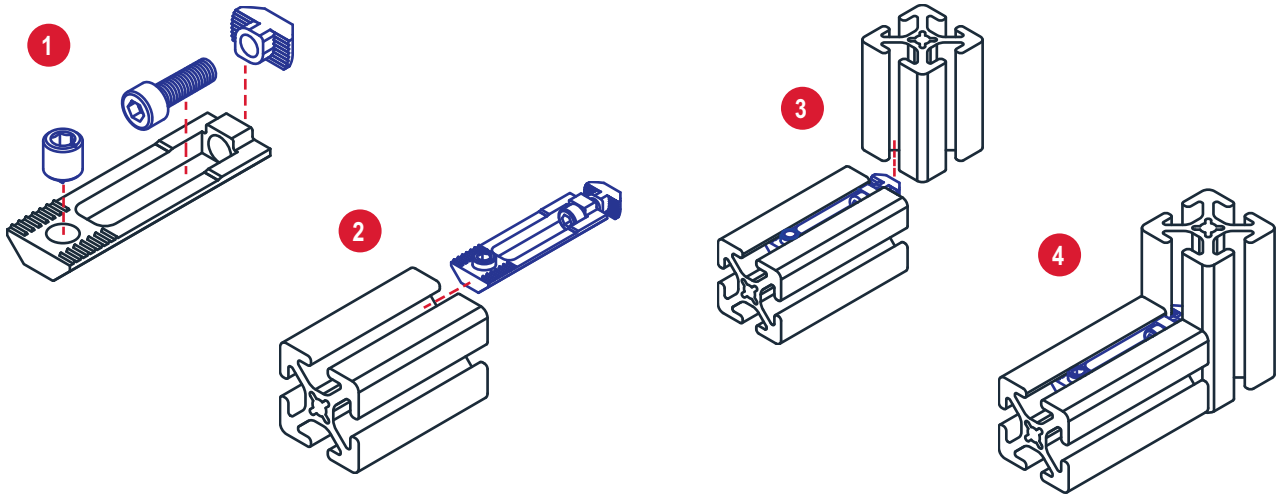
Milling Connector Assembly



Part Description:

The plate connector is a strong external fastening method offering a long-lasting connection. The plate connector loads from the side or end of the profile and forms a 90 degree connection. The plate connector allows users to mount to the mating profile's T-slot acting as a drop-in connector. This fastening method requires only an end tap machining service to the mounting profile.

45 Degree Support Connector

Part Description:

The 45 degree support connector provides a clean, flush connection and is typically used to reinforce a 90 degree connection. It requires minimal machining (an end tap to the support bar) and mounts using standard hardware. The 45 degree support connector is designed for use with 40mm by 40mm profiles. This connection lends itself to applications with heavy loads to minimize beam deflection.

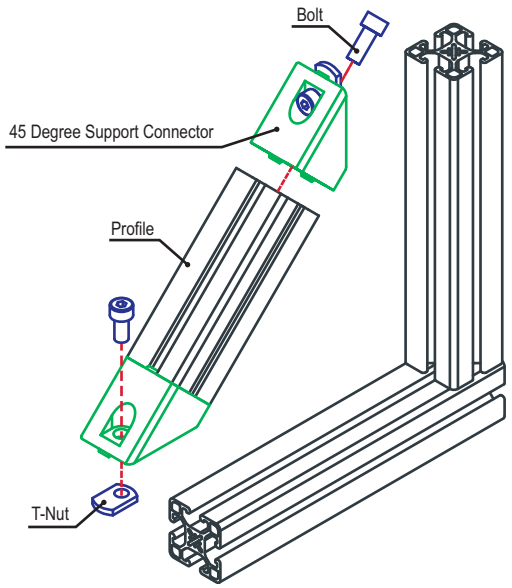
11-8520	40	1	M8 x 20mm SHCS	—	To Profile End
75-3621	40	1	M8 x 16mm SHCS	Economy	To T-Slot



Part Description:

The 45 degree support assembly includes socket head cap screws, washers and T-nuts. The support assembly is pre-machined with counterbores and a 45 degree miter angle on both ends. This fastening method provides a clean, flush connection and is typically used to reinforce a 90 degree connection. This connection lends itself to applications with heavy loads to minimize beam deflection.

Part Description:

The 2 hole - straight flat plate is an external fastening method that requires no machining services. It is a durable connection that can be easily repositioned and reused. This flat plate can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability. It engages the 2-degree drop-lock feature for most profile series when the assembly bolts are tightened to the required torque, creating a strong connection. **Tip:** Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

3 Hole - Straight Flat Plate

Part Description:

The 3 hole - straight flat plate is an external fastening method that requires no machining services. It is a durable connection that can be easily repositioned and reused. This flat plate can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability. It engages the 2-degree drop-lock feature for most profile series when the assembly bolts are tightened to the required torque, creating a strong connection. **Tip:** Use a double slide-in economy T-nut (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

6 Hole - Rectangular Flat Plate

Part Description:

The 6 hole - rectangular flat plate is an external fastening method that requires no machining services. It is a durable connection that can be easily repositioned and reused. The flat plate can provide infinite positioning along the profile T-slot, enabling a large degree of adjustability. When the bolts are tightened to the required torque the 2-degree drop-lock feature is engaged, helping to ensure the strength of the connection. **Tip:** Use double or triple slide-in economy T-nuts (pg. 366-367) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

2 Hole - Straight Transition Flat Plate with Flush Offset

Part Description:

The 2 hole - straight transition flat plate with flush offset is an external fastening method that connects fractional profiles of differing series. The offset design creates a flush connection between the different sized profiles. It is a durable connection that is reconfigurable and reusable and can provide infinite positioning along the profile T-slot.
Tip: Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

2 Hole - Straight Slotted Transition Flat Plate with Flush Offset

Part Description:

The 2 hole - straight slotted transition flat plate with flush offset is an external fastening method that connects fractional profiles of differing series. One of the bolt holes is slotted, as opposed to circular, to allow for an added degree of adjustability when lining up profiles. The offset design creates a flush connection between the different sized profiles. It is a durable connection that is reconfigurable and reusable and can provide infinite positioning along the profile T-slot. **Tip:** Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

6 Hole - Rectangular Transition Flat Plate Large Series Primary

Part Description:

The 6 hole - rectangular transition flat plate large series primarily connects fractional profiles of differing series. It is an external fastening method that requires no machining services. This option is reconfigurable and reusable and can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability. **Tip:** Use a double slide-in economy T-nut (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

4 Hole - 15 Degree Angled Flat Plate

Part Description:

The 4 hole - 15 degree angled flat plate is an external fastening method that requires no machining services. This flat plate creates a 15 degree angle between profiles and its shape reinforces the strength of the connection. It is a durable option that is easy to assemble and can be reconfigured and reused. **Tip:** Use a double slide-in economy T-nut (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

4 Hole - Tee Flat Plate

Part Description:

The 4 hole - tee flat plate is a strong, external fastening method that requires no machining services and can be used to connect more than two profiles together. This fastening option can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability. It is a long-lasting connection that is easily assembled and can be repositioned and reused. **Tip:** Use a double slide-in economy T-nut (pg. 366) to save time and money. 6 Hole - Tee Flat Plate

Part Description:

The 6 hole - tee flat plate is a strong, external fastening method that requires no machining services and can be used to connect more than two profiles together. This fastening option can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability. It is a long-lasting connection that is easily assembled and can be repositioned and reused. **Tip:** Use double or triple slide-in economy T-nuts (pg. 366-367) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

Part Description:

The 20 hole - cross flat plate is an external fastening method that can be used to join more than two profiles or even create a 4-way connection hub. It provides a strong, long-lasting connection that is easy to assemble and requires no machining services. The 20 hole - cross flat plate is durable and can be repositioned and reused. **Tip:** Use double or triple slide-in economy T-nuts (pg. 366-367) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

5 Hole - "L" Flat Plate

Part Description:

The 5 hole - "L" flat plate is a strong, external fastening method offering a long-lasting connection. This flat plate creates a 90º angle between profiles and is typically used to form a corner connection. The fastener is flush with the profiles, allowing for a larger clearance area. It requires no machining services, is easy to assemble, and can be reconfigured and reused. **Tip:** Use double or triple slide-in economy T-nuts (pg. 366-367) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly.

2 Hole - Lite Inside Corner Bracket

Part Description:

The 2 hole - lite inside corner bracket is an external fastening method that creates a 90 degree connection. It is a lightweight bracket that requires no machining services and can provide infinite positioning along the profile T-slot, allowing a large degree of adjustability. The 2 hole - lite inside corner bracket engages the 2-degree drop-lock feature when the assembly bolts are tightened to the required torque. It is a fastening method that can be repositioned and reused.

2 Hole - 18mm Slotted Inside Corner Bracket with Dual Support

Part Description:

The 2 hole - 18mm slotted inside corner bracket with dual support is an external, die-cast fastening method that creates a 90 degree connection. The dual support provides additional strength while the slotted holes allow for greater adjustability. Options with a slot tab help line up the profile with the bracket and prevent rotation. It requires no machining and can provide infinite positioning along the profile T-slot. **Additional Information:** Corner bracket covers are available separately and inhibit debris buildup while providing a finished look.

The 2 hole - 20mm slotted inside corner bracket with dual support is an external, die-cast fastening method that creates a 90 degree connection. The dual support provides additional strength while the slotted holes allow for greater adjustability. Options with a slot tab help line up the profile with the bracket and prevent rotation. It requires no machining and can provide infinite positioning along the profile T-slot. **Additional Information:** Corner bracket covers are available separately and inhibit debris buildup while providing a finished look.

Part Description:

The 3 hole - slotted inside corner bracket is an external fastening method that creates a 90 degree connection. There are two stacked holes on one side and one slotted hole on the opposite side of the bracket. The slotted hole allows for a larger degree of adjustability between connecting profiles. This fastener requires no machining services and can provide infinite positioning along the profile T-slot. The 3 hole - slotted inside corner bracket engages the 2-degree drop-lock feature when the assembly bolts are tightened to the required torque. This bracket can be repositioned and reused.

4 Hole - Wide Inside Corner Bracket

Part Description:

The 4 hole - wide inside corner bracket is an external fastening method that creates a 90 degree connection. There are two adjacent holes on each side of the bracket. This fastener requires no machining services and can provide infinite positioning along the profile T-slot, allowing a large degree of adjustability. It is a fastening method that can be repositioned and reused.

4 Hole - Inside Corner Bracket with Single Support

Part Description:

The 4 hole - inside corner bracket with single support is an external, die-cast fastening method that creates a 90 degree connection. Each side of the bracket has two holes stacked one on top of the other while the single support provides additional strength. The slotted mounting holes allow for greater adjustability between the connecting profiles. Brackets with a slot tab on the support help to line up the profile with the bracket and prevent rotation. It requires no machining services and can provide infinite positioning along the profile T-slot.

4 Hole - Inside Corner Bracket with Dual Support

Part Description:

The 4 hole - inside corner bracket with dual support is an external, die-cast fastening method that creates a 90 degree connection. The dual supports provide additional strength while the slotted holes allow for greater adjustability. Options with a slot tab help line up the profile with the bracket and prevent rotation. It requires no machining and can provide infinite positioning along the profile T-slot. **Additional Information:** Corner bracket covers are available separately and inhibit debris buildup while providing a finished look.

4 Hole - Wide Slotted Inside Corner Bracket

Part Description:

The 4 hole - wide slotted inside corner bracket is an external fastening method that creates a 90 degree connection. There are two adjacent holes on each side of the bracket. Two of the adjacent holes are slotted, allowing for a larger degree of adjustability between connecting profiles. This bracket requires no machining services and can provide infinite positioning along the profile T-slot; it also engages the 2-degree drop-lock feature when the assembly bolts are tightened to the required torque. It is a fastening method that can be repositioned and reused.

6 Hole - Center Inside Corner Bracket

Part Description:

The 6 hole - center inside corner bracket is an external fastening method that creates a 90 degree connection. One side of the bracket has four holes comprised of two rows and two columns while the second side has two centered, stacked holes. This bracket can be used to connect profiles that are within the same series but of different sizes. It requires no machining services and can provide infinite positioning along the profile T-slot, allowing a large degree of adjustability. The 6 hole - center inside corner bracket engages the 2-degree drop-lock feature when the assembly bolts are tightened to the required torque. It is a fastening method that can be repositioned and reused.

Part Description:

The 6 hole - left aligned inside corner bracket is an external fastening method that creates a 90 degree connection. One side of the bracket has four holes comprised of two rows and two columns while the second side has two left-aligned, stacked holes. This bracket can be used to connect profiles that are within the same series but of different sizes. It requires no machining services and can provide infinite positioning along the profile T-slot, allowing a large degree of adjustability. The 6 hole - left aligned inside corner bracket engages the 2-degree drop-lock feature when the assembly bolts are tightened to the required torque. It is a fastening method that can be repositioned and reused.

8 Hole - 57mm Inside Corner Bracket with Dual Support

Part Description:

The 8 hole - 57mm inside corner bracket with dual support is an external, die-cast fastening method that creates a 90 degree connection. The dual support provides additional strength while the slotted holes allow for greater adjustability. Options with a slot tab help line up the profile with the bracket and prevent rotation. It requires no machining and can provide infinite positioning along the profile T-slot. **Additional Information:** Corner bracket covers are available separately and inhibit debris buildup while providing a finished look.

Part Description:

The 3 way - triangular corner bracket is a die-cast external fastening method that is typically used to create a corner connection between three profiles. It is a connection method that is recessed within the corner and offers stability. The simplicity of this bracket makes it easy to connect multiple profiles. The 3 way - triangular corner bracket requires an end tap machining service (see page 861) on each of the connecting profiles. For triangular corner bracket cover caps see page 791.

3 Way - Rounded Corner Bracket

Part Description:

The 3 way - rounded corner bracket is a die-cast external fastening method that is typically used to create an outside corner connection between three profiles. It offers stability and can also be reused and repositioned. The simplicity of this bracket makes it easy to connect multiple profiles. The 3 way - rounded corner bracket requires an end tap machining service (see page 861) on each of the connecting profiles. For rounded corner bracket cover caps see page 791.

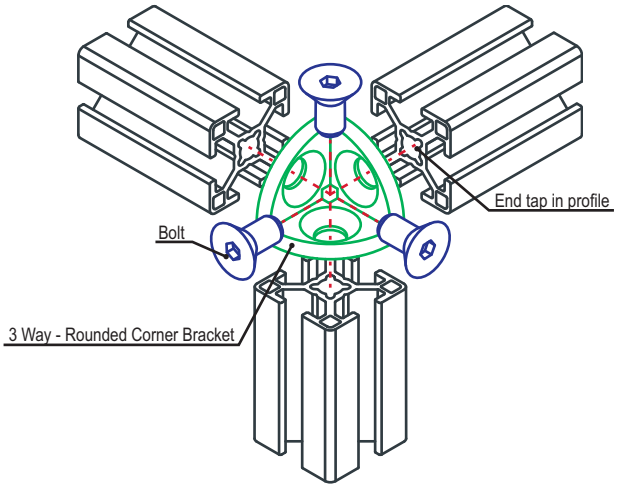
11-8716	30	3	M8 x 16mm Black Zinc FHSCS



Part Description:

The 2 hole - lite transition inside corner bracket creates a 90 degree connection between profiles within the same product type (either fractional or metric) but of differing series. It is a lightweight external fastening method that requires no machining services. The bracket is flush with the profiles, taking up less space in the overall design. This option can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability as well as being reconfigurable and reusable.

4 Hole - Lite Wide Transition Inside Corner Bracket

Part Description:

The 4 hole - lite wide transition inside corner bracket creates a 90 degree connection between fractional profiles of differing series. It is a lightweight bracket with two adjacent holes on each side. It is an external fastening method that requires no machining services. The bracket is flush with the profiles, taking up less space in the overall design. This option can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability as well as being reconfigurable and reusable.

8 Hole - Center Transition Inside Corner Bracket

Part Description:

The 8 hole - center transition inside corner bracket creates a 90 degree connection between profiles within the same product type (either fractional or metric) but of differing series. It has four holes, comprised of two rows and two columns, on each side and it is an external fastening method that requires no machining services. The bracket is flush with the profiles, taking up less space in the overall design. This option can provide infinite positioning along the profile T-slot, allowing for a large degree of adjustability as well as being reconfigurable and reusable.

8 Hole - Gusseted Inside Corner Bracket

Part Description:

The 8 hole - gusseted inside corner bracket is a strong, external fastening method that creates a 90 degree connection. It has four holes, comprised of two rows and two columns, on each side of the bracket. It requires no machining services and can provide infinite positioning along the profile T-slot, allowing a large degree of adjustability. The shape of the gusset provides extra material, strengthening the connection. It is a fastening method that can be repositioned and reused.

3 Way - Rounded Corner Connector

Part Description:

The 3 way - rounded corner connector is an external fastening method that is typically used to create a curved corner connection between quarter round profiles. It is a heavy-duty connection that is simple to use and provides a finished appearance while the rounded corner prevents sharp edges. The 3 way - rounded corner connector requires an end tap machining service (see page 861) on the mating profiles.

2 Hole - Pivot Joint

Part Description:

The 2 hole - pivot joint is an external fastening method that is lightweight yet sturdy. It is easy to use and is compatible with most metric profiles. This connector can either mount to the end of a profile, which would require an end tap (see page 861), or the slot tabs can be removed for mounting directly to the T-slot without any required machining services. The screws on the arms can be adjusted for movement or fixed in one position. The suggested hardware for the 2 hole - pivot joint can be found on page 339.

3 Hole - Triangular Pivot Plate

Part Description:

The 3 hole - triangular pivot plate is an external connection method that can be used either with a nub or mounted directly to the T-slot. It is typically used to create a structured angle connection between profiles. This fastening option provides a long-lasting connection and requires no machining services. It can be easily assembled, lending itself to repositioning and reuse. **Tip:** Use double slide-in economy T-nuts (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

Part Description:

The 3 hole - recessed straight pivot plate is an external connection method that is intended to be used in pairs to create a custom angle between profiles. The recess replaces the need for a nub in a pivot assembly. This fastening option provides a long-lasting connection and requires no machining services. It can be easily assembled, lending itself to repositioning and reuse. **Tip:** Use double slide-in economy T-nuts (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

3 Hole - Recessed Triangular Pivot Plate

Part Description:

The 3 hole - recessed triangular pivot plate is an external connection method that is intended to be used in pairs to create a custom angle between profiles. The recess replaces the need for a nub in a pivot assembly. It is typically used to create a structured angled connection between profiles. This fastening option provides a long-lasting connection and requires no machining services. It can be easily assembled, lending itself to repositioning and reuse. **Tip:** Use double slide-in economy T-nuts (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

3330	15	2	5/16-18 x 11/16" FBHSCS

Part Description:

The "L" structural pivot arm is an external connection method that is typically used to create a structural angle on a perpendicular axis. This fastening option provides a long-lasting connection and requires no machining services. It can be easily assembled, lending itself to repositioning and reuse. **Tip:** Use double slide-in economy T-nuts (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

Standard Straight Structural Pivot Arm

Part Description:

The standard straight structural pivot arm is an external connection method that can be used either with a nub or mounted directly to the T-slot. It is typically used to create a structured angle connection between profiles. This fastening option provides a long-lasting connection and requires no machining services. It can be easily assembled, lending itself to repositioning and reuse. **Tip:** Use double slide-in economy T-nuts (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

Part Description:

The extended straight structural pivot arm is an external connection method that can be used either with a nub or mounted directly to the T-slot.This part is typically used to create a structured angle connection between profiles while the extended arm provides a larger clearance area for pivot rotation. It provides a long-lasting connection, requires no machining services, and can be easily assembled, lending itself to repositioning and reuse. **Tip:** Use double slide-in economy T-nuts (pg. 366) to save time and money. Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

Standard Structural Pivot Assembly with Dual Straight Arms

Part Description:

The standard structural pivot assembly with dual straight arms comes preassembled with the pivot arms connected to the nub and includes the hardware to connect the nub to the mounting profile. It consists of one 0 degree, 90 degree or universal structural pivot nub and two straight structural pivot arms.

Standard Structural Pivot Assembly with Straight and "L" Arm

Part Description:

The standard structural pivot assembly with straight and "L" arm comes preassembled with the pivot arms connected to the nub and includes the hardware to connect the nub to the mounting profile. It consists of one 0 degree, 90 degree or universal structural pivot nub, one standard straight structural pivot arm and one "L" structural pivot arm.

Slide-In Economy T-Nut - Centered Thread

Part Description:

The slide-in economy T-nut with centered thread is a cost-effective fastening method available with options in size, material, thread, and finish. It loads from the profile ends and has a pilot thread projection that adds additional threading for increased strength. The centered thread of the slide-in economy T-nut lends itself to connections towards the middle of a profile or with a flat plate. This T-nut is available in a double (pg. 366) or triple (pg. 367) configuration. For information on 80/20 screw and bolt offerings for the slide-in economy T-nut refer to pages beginning on 387. **Tip:** Position the pilot projection down in the T-slot to avoid an uneven connection or crashing.

Part Description:

The slide-in economy T-nut with offset thread is a cost-effective fastening method available with options in size, material, and finish. It loads from the profile ends and has a pilot thread projection that adds additional threading for increased strength. The offset thread of the slide-in economy T-nut creates clean connections, making it ideal for corner connections because the T-nut doesn't extend beyond the length of the profile. This T-nut is available in a double (pg. 366) or triple (pg. 367) configuration. For information on 80/20 screw and bolt offerings for the slide-in economy T-nut with offset thread refer to pages beginning on 387. **Tip:** Position the pilot projection down in the T-slot to avoid an uneven connection or crashing.

Double Slide-In Economy T-Nut

Part Description:

The double slide-in economy T-nut is a fastening option that saves time and simplifies the assembly process. It loads from the profile ends and is available with options in size and finish. The pilot projection adds additional threading for increased strength. There is also a triple slide-in economy T-nut available (page 367). For information on 80/20 screw and bolt offerings for the double slide-in economy T-nut refer to pages beginning on 387. **Tip:** Position the pilot projection down in the T-slot to avoid an uneven connection or crashing.

Triple Slide-In Economy T-Nut / Economy T-Nut Holding Spring

Part Description:

The triple slide-in economy T-nut is a fastening option that saves time and simplifies the assembly process. It is especially useful for multiple-hole flat plates. This fastener loads from the profile ends and is available with options in size and finish. The pilot thread projection adds additional threading for increased strength. For information on 80/20 screw and bolt offerings for the triple slide-in economy T-nut refer to pages beginning on 387. **Tip:** Position the pilot projection down in the T-slot to avoid an uneven connection or crashing.

Economy T-Nut Holding Spring

The economy T-nut holding spring, available in 15 and 40 series, snaps onto the pilot projection of the 15 and 40 series Style 1 economy T-nut (page 364), double economy slide-in T-nut (page 366), and triple economy slide in T-nut (page 367). The spring holds the fastener in place, even when the profile is in a vertical position. **Additional Information:** Please note that springs are sold in packs of 100.

Standard Slide-In T-Nut

Part Description:

The standard slide-in T-nut is a fastening option that loads from the profile ends. It is a strong, durable connection that is available with options in size, thread, and finish. It can be customized up to 36” (91.44cm). For information on 80/20 screw and bolt offerings for the standard slide-in T-nut refer to pages beginning on 387.

Self-Aligning Slide-In T-Nut with Ball Spring

Part Description:

The self-aligning slide-in T-nut with ball spring is a fastening option that loads from the profile ends. The projection on the T-nut aligns it in the T-slot while the ball spring holds the fastener in place, even when the profile is in a vertical position. It is available with different thread options. For information on 80/20 screw and bolt offerings for the self-aligning slide-in T-nut with ball spring refer to pages beginning on 387.

Roll-In T-Nut with Flex Handle

Part Description:

The roll-in T-nut with flex handle is a fastening option that loads from either the profile ends or side, which is helpful in applications where the ends are inaccessible. The flex handle sticks out past the profile to make it easy to position and move within the T-slot. It is available with options in size, material, thread, and finish. For information on 80/20 screw and bolt offerings for the roll-in T-nut with flex handle refer to pages beginning on 387.

Part Description:

The roll-in T-nut with set screw is a fastening option that loads from either the profile ends or side, which is helpful in applications where the ends are inaccessible. When the set screw is engaged it keeps the T-nut in place in the T-slot, even if the profile is in a vertical position, simplifying the assembly process. It is available with options in size, material, thread, and finish. For information on 80/20 screw and bolt offerings for the roll-in T-nut with set screw refer to pages beginning on 387. **Tip:** An “L” wrench or combo tool (pg. 908-909) is required for adjusting the set screw.

Roll-In T-Nut with Ball Spring

Part Description:

The roll-in T-nut with ball spring is a fastening option that loads from the profile ends or side, which is helpful for applications where the ends are inaccessible. The ball spring holds the T-nut in the T-slot, even when the profile is in a vertical position, simplifying the assembly process. It is available with options in size, material, thread, and finish. For information on 80/20 screw and bolt offerings for the roll-in T-nut with ball spring refer to pages beginning on 387.

Self-Aligning Roll-In T-Nut

Part Description:

The self-aligning roll-in T-nut is a fastening option that loads either from the profile ends or side, which is helpful for applications where the ends are inaccessible. The projection on the T-nut aligns it in the T-slot for easy assembly. This fastening option provides infinite positioning along the T-slot and is available with options in size and thread. For information on 80/20 screw and bolt offerings for the self-aligning roll-in T-nut refer to pages beginning on 387.

Tall Self-Aligning Roll-In T-Nut with Spring Leaf

Part Description:

The tall self-aligning roll-in T-nut with spring leaf is a fastening option that loads either from the profile ends or side, which is helpful for applications where the ends are inaccessible. The projection on the T-nut aligns it in the T-slot while the spring leaf holds the fastener in place, even when the profile is in a vertical position. It is a strong and durable connection method that is available with different thread options. For information on 80/20 screw and bolt offerings for the tall self-aligning roll-in T-nut with spring leaf refer to pages beginning on 387.

Standard Drop-In T-Nut

Part Description:

The standard drop-in T-nut is a fastening option that loads either from the profile ends or side, which is helpful for applications where the ends are inaccessible. It has ridges that bite into the profile surface, creating a strong connection. The standard drop-in T-nut is available with options in size, material, thread, and finish. For information on 80/20 screw and bolt offerings refer to pages beginning on 387.

Slide-In T-Nut with Holding Spring

Part Description:

The slide-in T-nut with holding spring is a fastening option that is compatible with the 80/20 metric 45 series and loads from the profile ends. The projection on the T-nut aligns it in the T-slot while the spring holds the fastener in place, even when the profile is in a vertical position. The spring is removable and snaps onto the threaded projection. For information on 80/20 screw and bolt offerings for the slide-in T-nut with holding spring refer to pages beginning on 387.

Part Description:

The double anchor slide-in T-nut is used with a double anchor fastener. It loads from the profile end and is a strong, durable connection. There are options available in size, thread, and finish. **Important:** The double anchor slide-in T-nut can only be used with a double anchor fastener. See page 215 for information on the double anchor fastener.

Nylon T-Slot Nut

Part Description:

The nylon T-slot nut is a light-duty fastening method typically used for accessories. The T-slot nut remains in place even when used in a vertical position. When used with a sheet metal screw, the nut expands into the T-slot. There are options available with or without the screws. **Additional Information:** Please note that nylon T-slot nuts 3346 and 40-3346 are sold in packs of 50 and 3348 and 40-3348 are sold in packs of 12.

Threaded Insert:

The threaded insert allows 45 series pivot joints to be mounted to a 45 series profile end. The insert is formed through thread rolling, creating strong, uniform, and accurate external threads. It has high tensile, shear, and fatigue strength. Use a ¼ inch hex tool (see page 909).

Part Description:

The standard tube insert is used to make strong connections between Ready Tube profiles. It connects profiles together when their lengths are divisible by 1.50". The standard tube insert requires no additional machining services when used in Ready Tube profiles with predrilled holes. See below for information on hardware for the standard tube insert. **Additional Information:** For a custom length insert, see the tube insert profile on page 856.

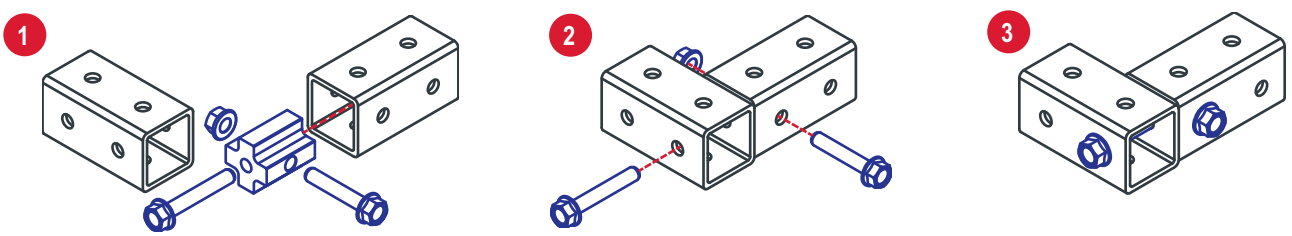
Standard Tube Insert Kit with Hex Nut



Extended Tube Insert

Part Description:

The extended tube insert connects Ready Tube profiles together when their lengths are not divisible by 1.50". It is also commonly used to add casters and leveling feet and requires no additional machining services when used in Ready Tube profiles with predrilled holes. See below for information on hardware for the standard tube insert. **Additional Information:** For a custom length insert, see the tube insert profile on page 856.

Part Description:

The standard tube insert kit with hex nut is used to make strong connections between Ready Tube profiles. It is comprised of a standard tube insert, two flanged hex head bolts and a flanged hex nut and is used to connect profiles together when their lengths are divisible by 1.50”. The standard tube insert kit with hex nut requires no additional hardware or machining services. Ready Tube is also available without pre-drilled holes; fastening these profiles will require machining services.

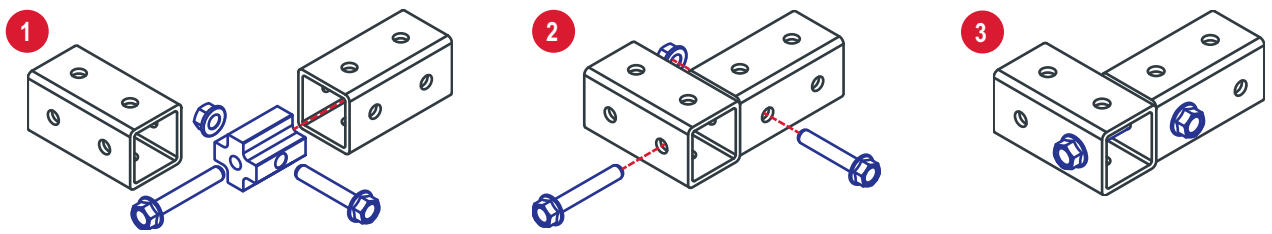
Standard Tube Insert Kit with Hex Nut



Standard Tube Insert Kit with Roll Pin

Part Description:

The standard tube insert kit with roll pin is used to make strong connections between Ready Tube profiles. It is comprised of a standard tube insert, one flanged hex head bolts and a roll pin and is used to connect profiles together when their lengths are divisible by 1.50". The roll pin provides a smooth, clean finish and eliminates the use of protruding hardware. The standard tube insert kit with roll pin requires no additional hardware or machining services. Ready Tube also is available without pre-drilled holes; fastening these profiles will require machining services. Use a roll pin punch to install this product (page 915).

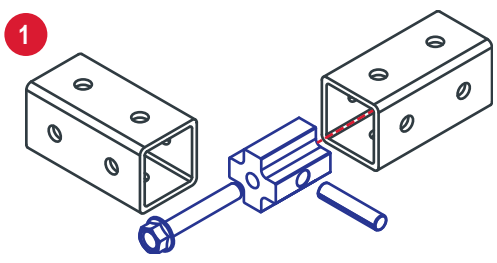
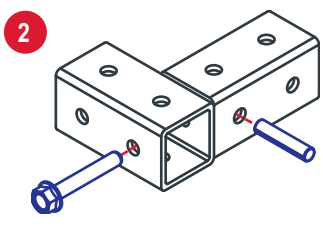
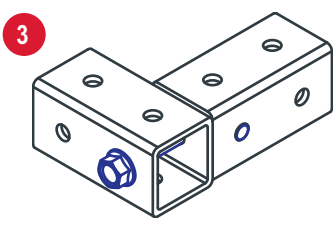
Standard Tube Insert Kit with Roll Pin







Part Description:

The roll pin is commonly used with the standard or extended insert to make strong connections between Ready Tube profiles. The roll pin provides a smooth, clean finish and eliminates the need for protruding hardware when used with the standard insert. Use a roll pin punch to install this product (page 915). For information on the standard tube insert kit with roll pin see page 422.

Part Description:

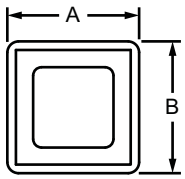
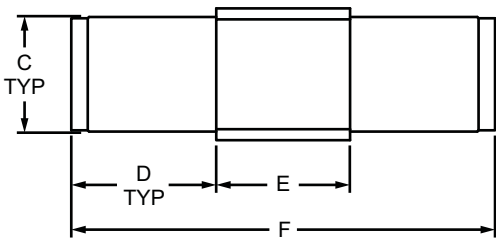
The 2 way - butt connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It connects profiles and provides a clean, flush connection quickly and easily using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. The 2 way - butt connector can also be used to connect shorter bars together where logistics or space makes it difficult to maneuver longer profiles. It requires no additional hardware and no machining services.





Part No.	Series	Material	Process	Color	A	B	C	D	E	F	Weight
9115	QF	Nylon	Injection Molded	Gray	1.100"	1.100"	.870"	1.100"	1.000"	3.200"	.061 lb

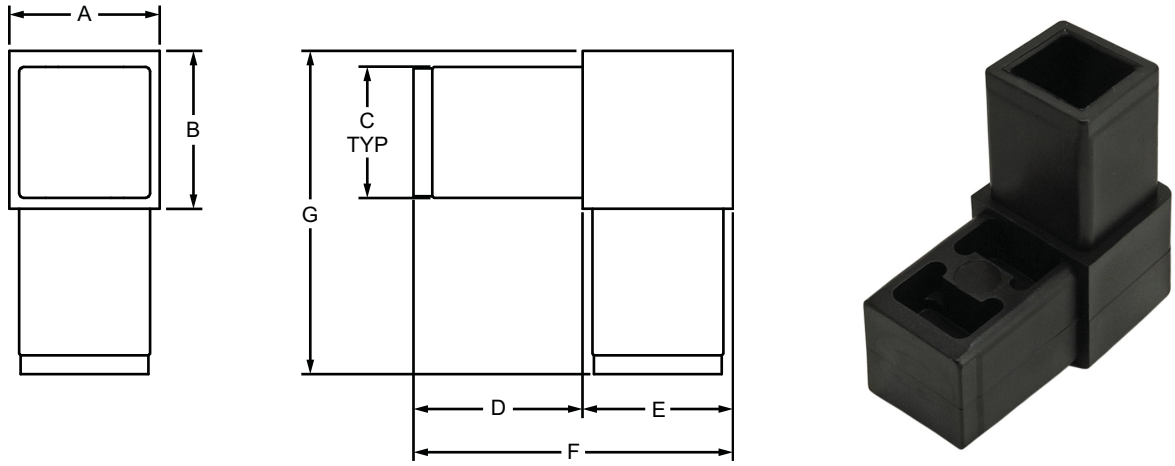
2 Way - Corner Connector

Part Description:

The 2 way - corner connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It provides a 90 degree flush connection quickly and easily using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. The 2 way - corner connector is commonly used when transitioning between standard and flanged profiles. It requires no additional hardware and no machining services. Connecting flanged Quick Frame profiles at a 90 degree angle requires a 45 degree miter cut (see machining service on page 883) to connect without interference.



Part No.	Series	Material	Process	Color	A	B	C	D	E	F	G	Weight

Part Description:

The 90 degree straight base connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of hardware. It is convenient for projects that will be attached or mounted at a 90 degree angle to any flat surface or T-slot profile and provides a clean, flush connection. The 90 degree straight base connector connects profiles quickly and easily using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds.

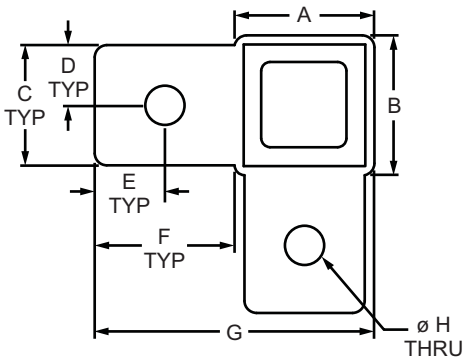
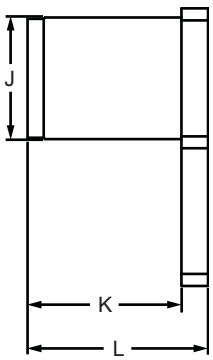
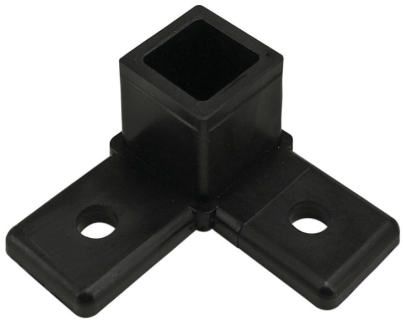
90 Degree Corner Base Connector

Part Description:

The 90 degree corner base connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of hardware. It is convenient for projects that will be attached or mounted at a 90 degree angle to any flat surface or T-slot profile and it also provides a corner connection. The 90 degree corner base connector attaches profiles quickly and easily using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds.







Part No.	Series	Material	Process	Color	A	B	C	D	E	F	G	H	J	K	L	Weight

FASTENERS

Part Description:

The 3 way - tee connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of hardware. It provides flush connections of up to three Quick Frame profiles using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. This fastener can connect two profiles end to end with an additional 90 degree connection and is also commonly used when transitioning between standard and flanged profiles. The 3 way - tee connector requires no additional hardware and no machining services. Connecting flanged Quick Frame profiles at a 90 degree angle requires a 45 degree miter cut (see machining service on page 883) to connect without interference.

3 Way - Corner Connector

Part Description:

The 3 way - corner connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It provides flush 90 degree connections of up to three Quick Frame profiles, convenient when you want to branch another profile off of a corner. The 3 way - corner connector is commonly used when transitioning between standard and flanged profiles and uses only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. It requires no additional hardware or machining services. Connecting flanged Quick Frame profiles at a 90 degree angle requires a 45 degree miter cut (see machining service on page 883) to connect without interference.

Part Description:

The 4 way - cross connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It provides flush connections of up to four Quick Frame profiles, forming 90 degree or 180 degree connections. The 4 way - cross connector is commonly used when transitioning between standard and flanged profiles and uses only a soft-faced mallet to form light-duty yet sturdy builds. It requires no machining services or additional hardware.

4 Way - Corner Connector

Part Description:

The 4 way - corner connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It provides flush connections of up to four Quick Frame profiles, forming 90 degree or 180 degree connections. The 4 way - corner connector is convenient when you want to branch another profile off of a corner or straight line. The 4-way corner connector is commonly used when transitioning between standard and flanged profiles and uses only a soft-faced mallet to form light-duty yet sturdy builds. It requires no machining services or additional hardware.

Part Description:

The 5 way - junction connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It provides flush connections of up to five Quick Frame profiles, forming 90 degree or 180 degree connections. The 5 way - junction connector is commonly used when transitioning between standard and flanged profiles and uses only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. It requires no additional hardware and no machining services.

6 Way - Junction Connector

Part Description:

The 6 way - junction connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It provides flush connections of up to six Quick Frame profiles, forming 90 degree or 180 degree connections. The 6 way - junction connector is commonly used when transitioning between standard and flanged profiles and uses only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. It requires no additional hardware and no machining services.

Part Description:

The caster or spacer receptacle insert is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It enables the mounting of casters for mobility or the addition of spacers between profiles. The caster or spacer receptacle insert requires no machining services.

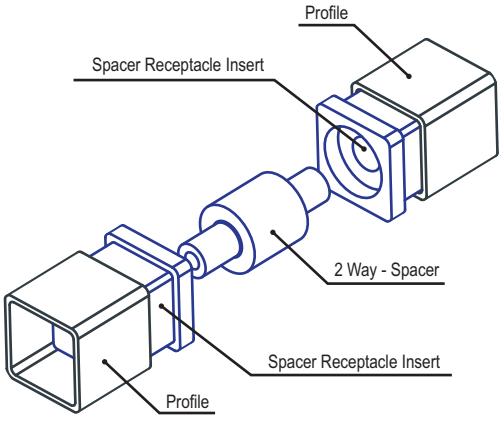
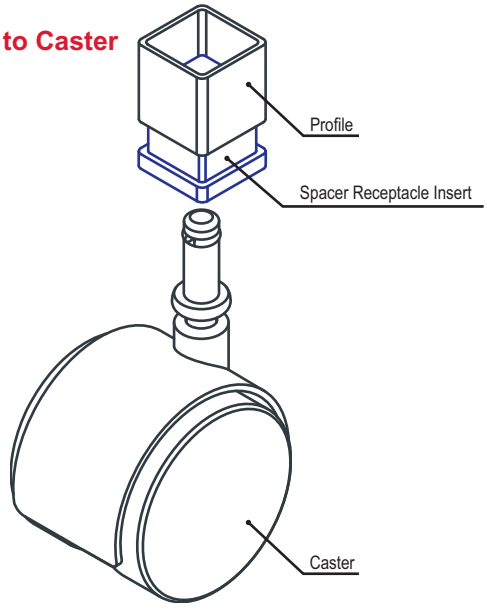
Profile to Profile



Profile to Caster



3 Way - Corner Connector with Caster or Spacer Receptacle

Part Description:

The 3 way - corner connector with caster or spacer receptacle is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It enables the mounting of casters for mobility or the addition of spacers between profiles that are in a corner configuration. It is commonly used for carts or mobile storage and requires no machining services.

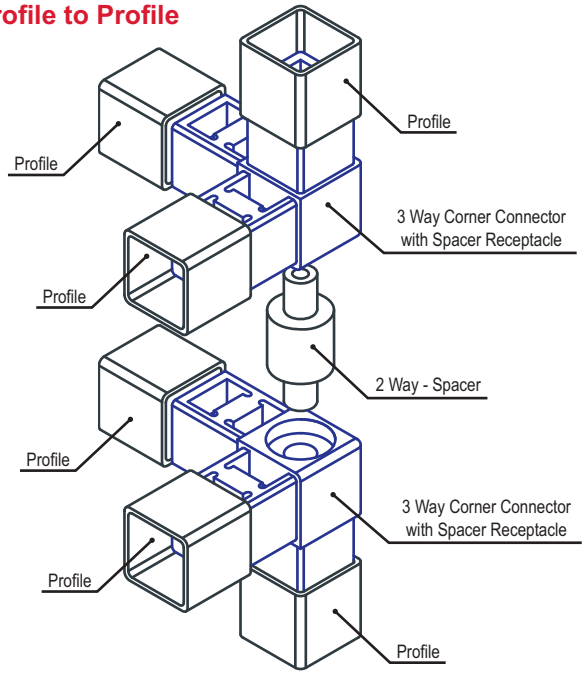
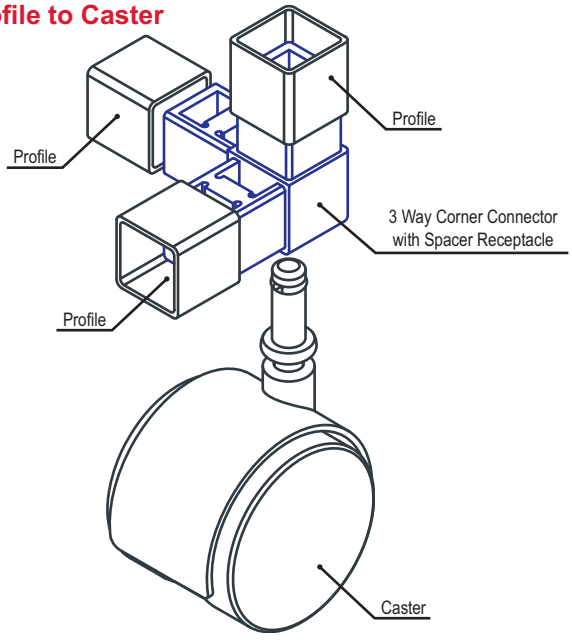
Profile to Profile

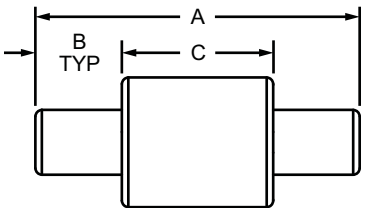


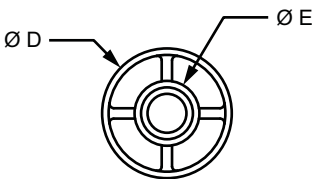
Profile to Caster



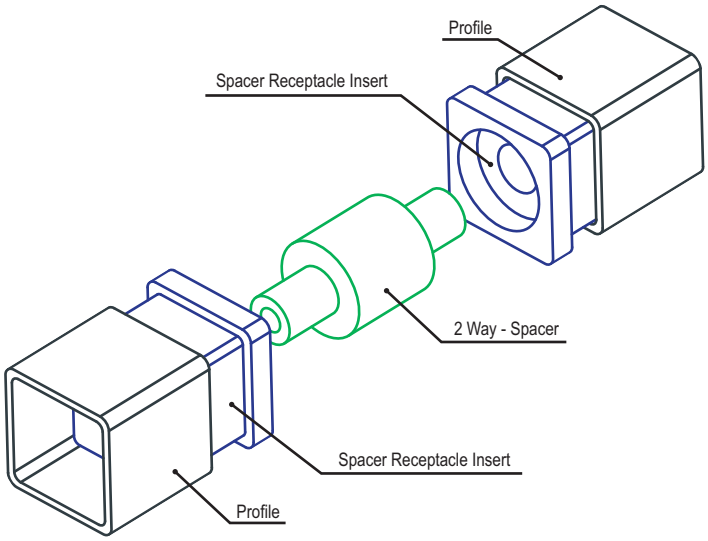
Part Description:

The 2 way - spacer is made of nylon and fits into a spacer receptacle insert (page 435) to create tension. It adds space between Quick Frame profiles to form varying lengths of bars and can also be used to provide a stable pivot for door applications. The 2 way - spacer connects profiles quickly and easily using only a soft-faced mallet to form light-duty yet sturdy builds. It requires no machining services.





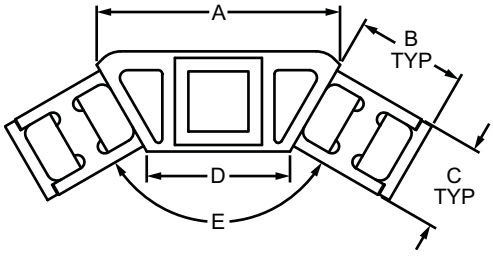
Part No.	Series	Material	Process	Color	A	B	C	D	E	Weight
9198	QF	Nylon	Injection Molded	Gray	1.875”	.500”	.870”	.770”	.375”	.013 lb

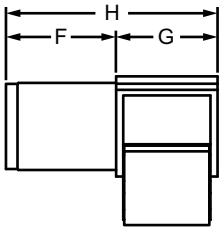


3 Way - Hexagon Segment Connector

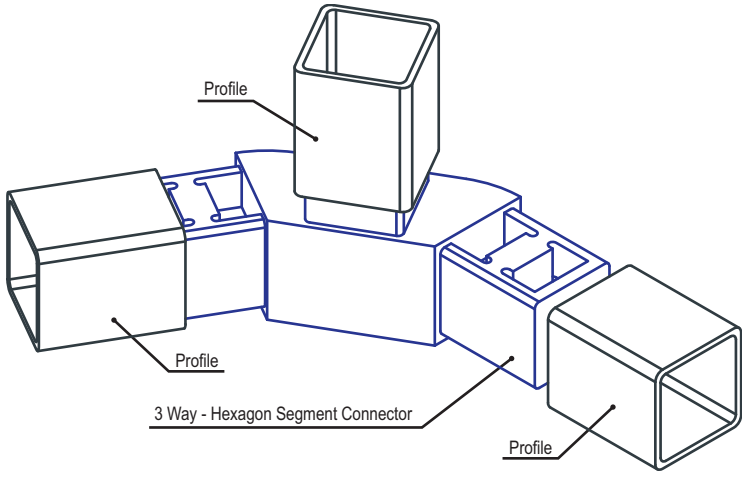
Part Description:

The 3 way - hexagon segment connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It creates a unique corner connection perfect in guarding and display applications and can be used with other connectors to create an enclosure. The 3 way - hexagon segment connector provides flush connections of up to three Quick Frame profiles using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. It requires no additional hardware and no machining services.



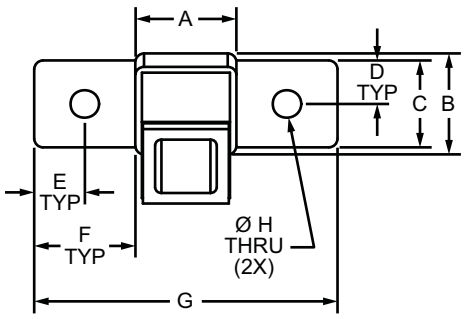


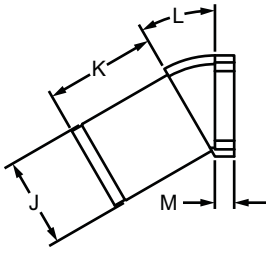
Part No.	Series	Material	Process	Color	A	B	C	D	E	F	G	H	Weight
9273	QF	Nylon	Injection Molded	Black	2.400"	1.105"	.870"	1.375"	120°	1.100"	1.102"	2.202"	.104 lb



Part Description:

The 30 degree straight hexagon base connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It can be used in combination with other connectors to create an enclosure or to add a 30 degree angle to any project. The 30 degree straight hexagon base connector is convenient for projects that will be attached or mounted to any flat surface. It provides a flush connection using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds and requires no additional hardware and no machining services.





Part No.	Series	Material	Process	Color	A	B	C	D	E	F	G	H	J	K	L	M	Weight

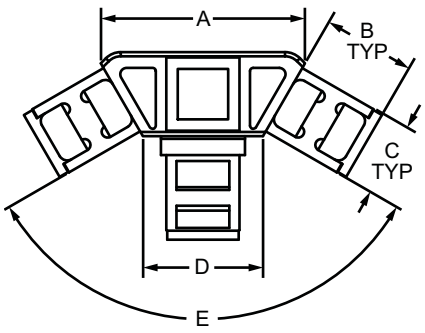
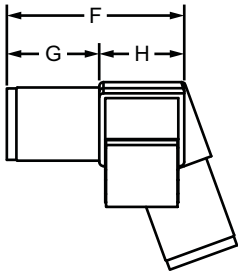
60 Degree Hexagon Side and Top Connector

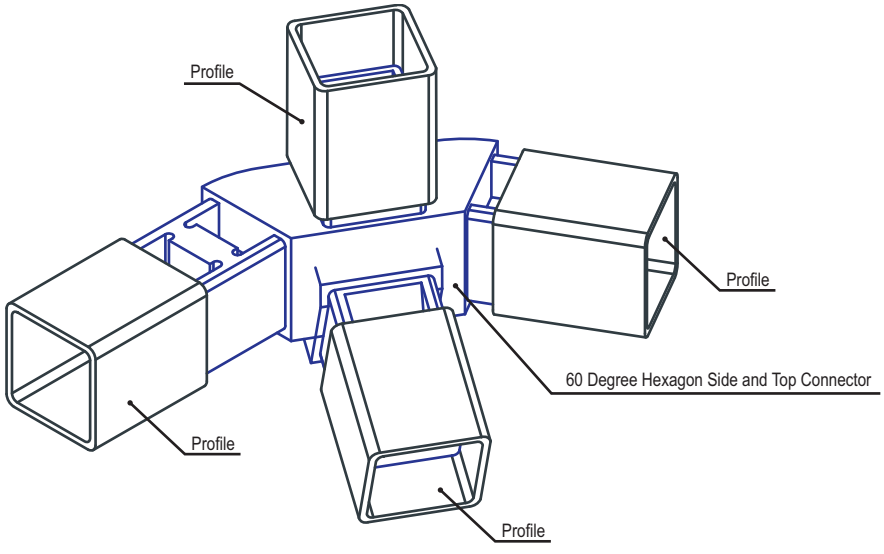
Part Description:

The 60 degree hexagon side and top connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It creates a unique connection perfect for guarding and display applications and can be used with other connectors to create an enclosure. The 60 degree hexagon side and top connector provides flush connections of up to seven Quick Frame profiles using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. The top pitch is 20 degrees. It requires no additional hardware and no machining services.



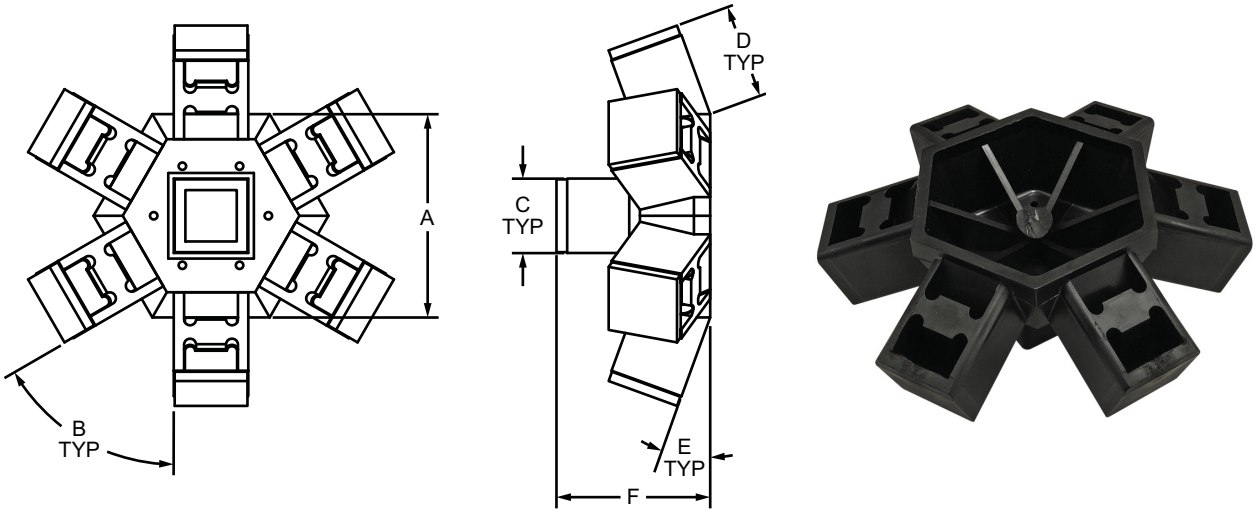


Part No.	Series	Material	Process	Color	A	B	C	D	E	F	G	H	Weight
9275	QF	Nylon	Injection Molded	Black	2.430"	1.100"	.870"	1.430"	120°	2.112"	1.100"	1.012"	.136 lb



Part Description:

The 20 degree pitch hexagon connector is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It creates a unique connection perfect for guarding and display applications and can be used with other connectors to create an enclosure. The 20 degree pitch hexagon connector provides flush connections of up to four Quick Frame profiles using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. It requires no additional hardware and no machining services.



Part No.	Series	Material	Process	Color	A	B	C	D	E	F	Weight

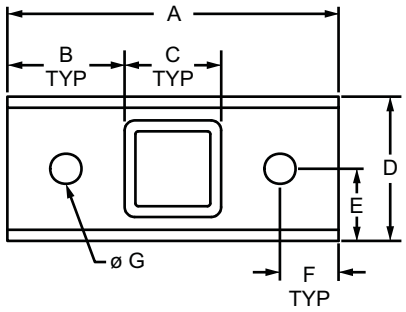
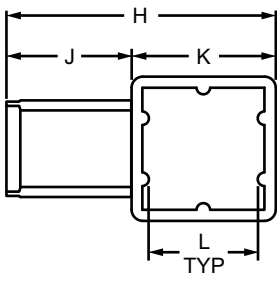
Quick Frame to 10 Series Transition Tee

Part Description:

The Quick Frame to 10 series transition tee is made of nylon and is used with a Quick Frame profile which has built-in ridges that bite into the fastener to create tension without the use of additional hardware. It is used to transition from a 1" x 1" T-slotted profile using only a soft-faced mallet (page 914) to form light-duty yet sturdy builds. The Quick Frame to 10 series transition tee requires no additional hardware and no machining services. For information on the mounting hardware for 10 series profiles see below.





Part No.	Series	Material	Process	Color	A	B	C	D	E	F	G	H	J	K	L	Weight

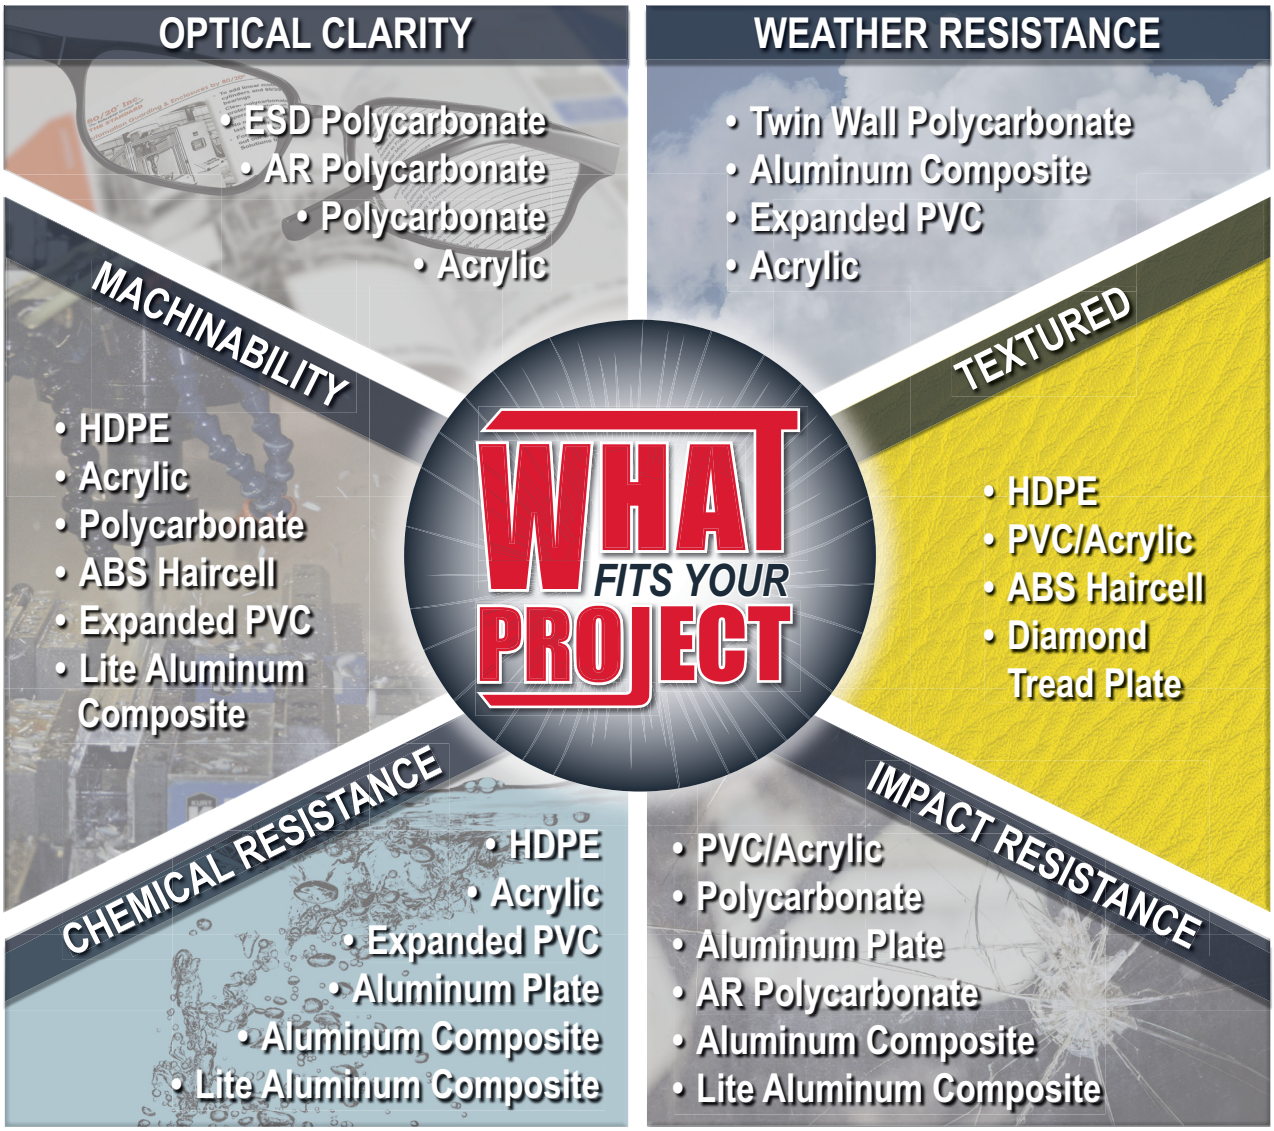
Introduction to Panels & Doors

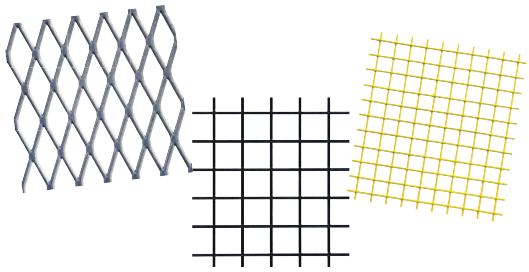
80/20 has an extensive in-house panel shop with a wide variety of wire, mesh and plastic panels. Our panels are frequently integrated into design plans and builds. They are great for guarding, enclosures, desk tops and shelves, among other applications. 80/20 carries an impressive stock of almost 100 panels in different sizes, shapes, thicknesses, colors, and materials. Keep in mind that 80/20 mesh, plastic panels, and aluminum plates are ordered by the square foot or square meter.

When deciding on your panel you'll want to make a thorough assessment of your needs. You will find that you have several choices to consider when incorporating paneling into your projects.



Expanded Metal & Wire Mesh

Expanded metal and wire mesh panels work well for guarding and enclosure applications where air flow is required. They provide a barrier and can be used to block off a machine, supplies, inventory, or equipment while still providing visual access. They are strong yet lightweight and are available in a range of materials and colors.



How Panels Are Used with T-Slot

80/20 panels and mesh retainers can be used a couple different ways with T-slot profiles. You can either rest the panel in the T-slot or mount it flush with the T-slot profile. Guarding, enclosures, and access points lend themselves well to panels that rest within the profile while desks and furniture applications commonly have flush panels.

Tip: When sizing a panel that will be inserted into the T-slot, be sure to add extra material to your visible panel size.

Quick Frame: For flanged Quick Frame subtract 0.14" of the visible panel size.

Series	Add
10	.500"
15	.750"
20	10mm
25	14mm
30	15mm
40	22mm
45	24mm

Panel & Mesh Mounting Options

You have several options when it comes to mounting your panels and mesh. Consider your application; Is it being used to keep things in or out or both? Are you using a mesh panel? Will you be changing out the panel often? Will the project be used inside or outside?

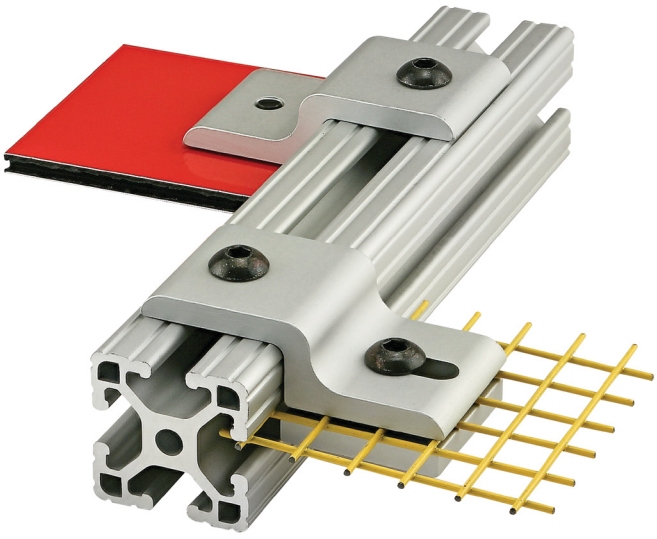
The answer to these questions will help determine the type of mounting option you will want to use.

Retainers

Blocks

Gasket

Retainers are easy to use and available in several sizes and shapes to fit your needs.

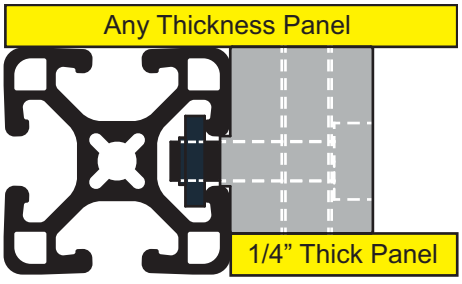


Panel Retainers:

- Strong
- Cost-effective
- Corrosion-resistant
- Indoor or Outdoor Use
- Requires drill-through hole in panel

Mesh Retainers:

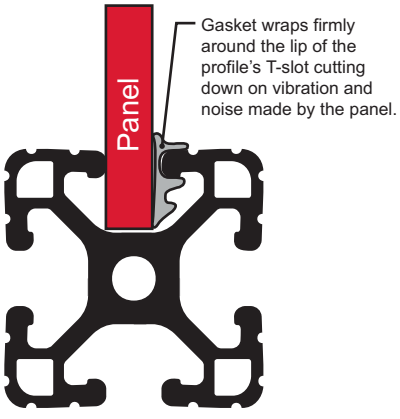
- Strong
- Cost-effective
- Corrosion-resistant
- Indoor or Outdoor Use
- Includes a backing plate
- No machining required
- Slotted holes for adjustability



Panel Mount Blocks are a great way to mount your panel either flush with the profile or on the profile surface. They provide stability while reducing vibration and there are options available in aluminum or nylon.

Panel Gasket is a great finishing touch for your project. Use it to help secure your panel and prevent it from rattling within the frame. Keep in mind that you only need to put panel gasket on one side of the panel. Here are a few other tips when using panel gasket:

- If you are having trouble installing the gasket, use a little bit of automotive vinyl protectant.
- Cut your panel gasket 2-3 inches (50-76mm) longer than the opening to make the corners stay tight.
- When installing panel gasket, begin in the middle of your panel and work your way out.



Tips for Ordering Panels

PLEASE NOTE A DRAWING IS REQUIRED

Panel Orientation:

When ordering panels it is important to indicate orientation:

Expanded Metal:

Specify horizontal or vertical diamond orientation.

Twin Wall Polycarbonate:

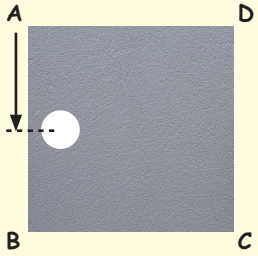
Specify horizontal or vertical channel orientation.

Phenolic Resin:

Specify horizontal or vertical woodgrain orientation.

Textured Side:

Panels like PVC/Acrylic and ABS Haircell have a textured and smooth side. When machining is needed it's important to indicate which is outward with "T" for textured or "S" for smooth.



Machining Reference:

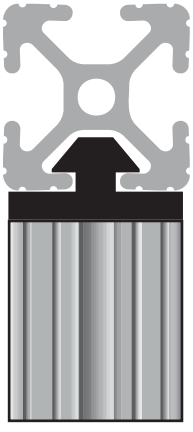
Beginning with the upper left corner, call outs are designated A, B, C, and D in a counterclockwise direction on panels. Referencing these call outs when ordering machining allows for proper measuring of the service position.

In this example, the service center line is measured down from A.

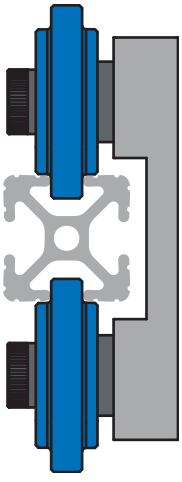
Motion within the T-slot

Door glides and roller wheels slide within the T-slot channel to enable movement of a door, panel, frame or other component. Create accessible displays or an entrance with a bi-fold door.

Glides are simple to use and bolt directly to a profile end to freely rotate as the door or application pivots. There is an option available that creates a bi-fold door without the use of a bottom rail.



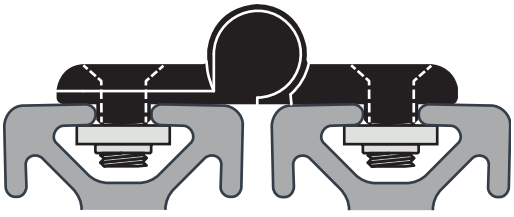
Roller wheels mount directly to a T-slot or profile end and are ideal for guided linear motion. They are made of self-lubricating nylon with a permanent lubricated bushing available which reduces maintenance time and cost.



Variety of Hinge Options

80/20 offers a wide assortment of hinges in a variety of styles, materials, and sizes that can be mounted to a panel or profile to fit your requirements. From light to heavy-duty projects, there are a range of options available; choose from different materials such as plastic, zinc, or aluminum.

- Plastic hinges are typically used for lightweight doors and to connect plastic panels while aluminum hinges are a heavier-duty option.
- Lift-off hinges are popular as they can create a door that lifts off by using all right or all left lift-off hinges, or confine a door or access point by using a combination of left and right hinges.



Tip: To increase its load-bearing capacity and prevent it from rotating, choose hinges with slot tabs or slot pins. If needed, the tabs and pins can be removed when, for example, a panel is being mounted.

Finishing Touches, Handles & More

80/20 has a wide range of handles, locks and catches for your door or access point. Start off by deciding how frequently the door will be in use and whether you will want it to be locked.

Unlocked

Locked

If people will be using it often, consider ergonomic handles or offset handles that hinder finger-pinching injuries. There are also flush handles to prevent snags or heavy-duty latches for larger doors or magnetic catches to help ensure a connection.

Acrylic Panels

Part Description:

Acrylic panels are a cost-effective lightweight option that provides high optical clarity. It is stable up to 180 degrees Fahrenheit and weather resistant, making it ideal for both indoor and outdoor applications. Acrylic is more impact resistant than glass while being half the weight. It is easily machined and comes in a range of colors and thicknesses. This panel is commonly used in displays, signs, furniture and partitions.

Part Description:

AR polycarbonate panels are a durable option that provides high optical clarity and impact resistance. It is more abrasion and UV resistant than polycarbonate panels and stable up to 240 degrees Fahrenheit, making it ideal for both indoor and outdoor applications. AR polycarbonate is commonly used in enclosures and safety applications in high-traffic areas.

ESD Polycarbonate Panels

Part Description:

Electrostatic dissipative (ESD) polycarbonate panels are designed to prohibit static electricity. It is a lightweight option that has excellent impact and chemical resistance. ESD has superior clarity while being easy to machine, providing design versatility and flexibility. This panel is useful in clean room, medical, and manufacturing processes where you want to minimize the occurrence and likelihood of static shock.

Part Description:

Polycarbonate panels are durable and provide impact resistance, making it ideal for industrial applications. This panel is two hundred times stronger than glass and thirty times stronger than acrylic. It has high optical clarity while being stable up to 240 degrees Fahrenheit. Polycarbonate is easily machined with simple hand tools and resists cracking, chipping or breaking when cut or drilled.

Recycled Polycarbonate Panels

Part Description:

Recycled polycarbonate panels are durable and provide impact resistance, making it ideal for industrial applications. Polycarbonate is two hundred times stronger than glass and thirty times stronger than acrylic. This panel is made of recycled material and may appear tinted. Recycled polycarbonate panels are stable up to 240 degrees Fahrenheit, easily machined, and resists cracking, chipping or breaking when cut or drilled.

Part Description:

Acrylonitrile butadiene styrene (ABS) haircell panels are a cost-effective option that has one smooth side and one textured side which hides scratches and marks. It provides impact resistance and is stable up to 180 degrees Fahrenheit. ABS haircell is easily machined with simple hand tools and resists cracking, chipping or breaking when cut or drilled. It is commonly used in furniture, workstations, displays and partitions.

PVC/Acrylic Panels

Part Description:

Polyvinyl Chloride (PVC) / Acrylic panels are impact and chemical resistant with an option for either a smooth finish or a texture on one side which hides scratches and marks. It is stable up to 160 degrees Fahrenheit and is available in black or yellow. PVC/Acrylic is commonly used in exhibits, displays, signs, and fixtures.

Aluminum Composite Panels

Part Description:

Aluminum composite panels are a strong and durable option while being half the weight of aluminum. It provides impact and weather resistance and is stable up to 175 degrees Fahrenheit. This panel is easily machined and resists buckling and warping. Aluminum composite panels are commonly used in guarding, enclosures and workstations.

Twin Wall Polycarbonate Panels

Part Description:

Twin wall polycarbonate panels are a lightweight, weather resistant option, making it ideal for both indoor and outdoor applications. It provides 90 percent light transmission while the twin wall configuration adds durability. Twin wall polycarbonate is commonly used in greenhouses, enclosures, and partitions.

Part No.	Series	Color	Material	Thickness	Stock Sheet Size	Weight

Part Description:

High density polyethylene (HDPE) panels are a strong, corrosion resistant option that provides durability and resists warping. All options except the natural HDPE have texture on both sides, which masks scratches and marks. HDPE panels are chemical and impact resistant, available in six color options and easily machined. They are a great solution in a wide range of indoor and outdoor environments and commonly used in workspaces, storage and organization units, and enclosures.

HDPE Pegboard

Part Description:

High density polyethylene (HDPE) pegboard is a strong, corrosion-resistant panel that slides right into profile T-slots. It offers high durability and doesn't warp, making it a great solution for storage and organization in a wide range of environments. Use it in applications at work, in the garage or hobby room, or incorporate it into existing designs to make tools easily accessible. This pegboard is a great way to save space while increasing productivity.

Solid Aluminum Plate

Part Description:

Solid aluminum plate is made of 6061-T6 aluminum alloy and comes standard in an unanodized mill finish. It is a strong, durable option and can be easily machined and anodized. It is available in six thicknesses ranging from .060” (1.524mm) to .500” (12.700mm). Solid aluminum plate is commonly used in structural framing, base plates and industrial tabletops.

Part No. (Metric)	Series	Material	Alloy	Thickness	Stock Sheet Size	Weight
2452 (65-2452)	F M	Aluminum	6061-T6	.060” (1.524mm)	48” +/- .125 x 144” +/- .156 (1219.2mm + 3.2/-0 x 3657.6mm + 4.0/-0)	.889 lb / ft² (4.336 kg / m²)

Part Description:

Diamond tread plate is made of 3003-H22 aluminum and is a lightweight, strong material with a raised pattern to improve traction and reduce the risk of sliding or slipping. It is available in thicknesses ranging from .125" (3.175mm) to .250" (6.350mm).The 3003-H22 aluminum provides a shiny surface and is widely used in decorative, cosmetic and architectural applications. Diamond tread plate also lends itself to stairs, ramps, walkways, garages and workshops.

Part No. (Metric)	Series	Color	Material	Finish	Thickness	Stock Sheet Size	Weight

Aluminum Panel Mount Block

Part Description:

The aluminum panel mount block can be used to mount a panel flush with a profile edge or on the profile surface. There is a slot tab on the block that acts to align the mount in the T-slot. The aluminum panel mount block increases stability of the mounted panel while also reducing vibration. It is easy to use and simplifies the process of adding or removing plastic panels. The hardware to mount the block to the T-slot is included while the hardware to mount the panel to the block should be based on the panel type and thickness.

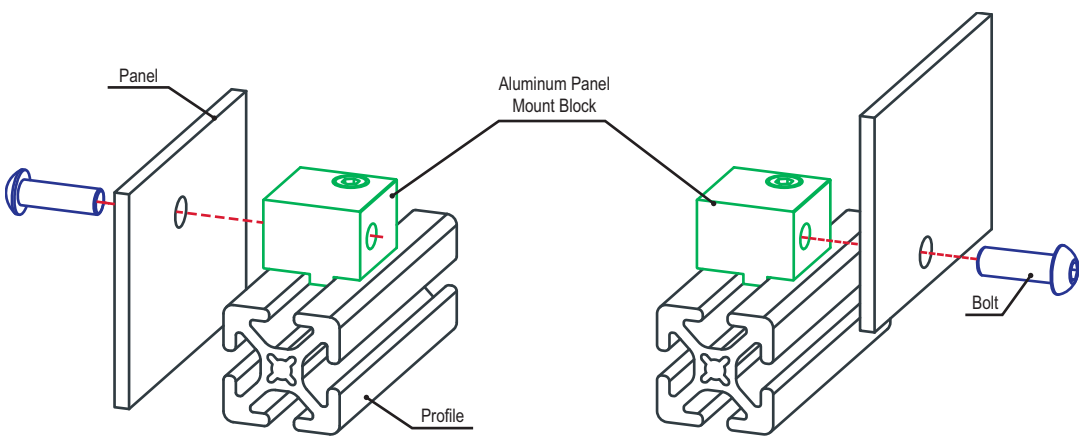
- 3063 - mounts 1/4" panels to the surface of 10 Series profiles and mounts 3/16" panels flush.
- 3065 - mounts 1/2" panels to the surface of 10 Series profiles.
- 3114 - mounts 1/4" panels to the surface of, or flush with, 15 series profiles.
- 3117 - mounts 1/2" panels to the surface of 15 Series profiles.
- 25-2427 - mounts 4.5mm panels flush with 25 Series profiles.
- 40-2425 - mounts 6mm panels flush with 40 Series profiles.

Panel Covers Profile Surface **Panel Flush with Profile Edge**



Lite Panel Mount Block

Part Description:

The lite panel mount block is made of nylon and can be used to mount a panel flush with a profile edge or on the profile surface. The lite panel mount block is a cost-effective option that increases stability of the mounted panel while also reducing vibration. The lite panel mount block is easy to use and simplifies the process of adding or removing plastic panels. The suggested bolt assembly to mount the block to the T-slot can be found below. The hardware to mount the panel to the block should be based on the panel type and thickness.

Drop-In Lite Panel Mount Block

Part Description:

The drop-in lite panel mount block is made of nylon and can be used to mount a panel flush with a profile edge or on the profile surface. It has a molded extension that acts as a T-slot stud and drops into the profile, perfect for instances where profile ends are captivated. The block is a cost-effective option that increases stability of the mounted panel while also reducing vibration. The drop-in lite panel mount block is easy to use and simplifies the process of adding or removing plastic panels.

Adjustable Panel Mount Block

Part Description:

The adjustable panel mount block is made of die-cast zinc and can be used to mount a panel flush with a profile edge or the profile surface. It is a strong, heavy-duty option that increases stability of the mounted panel while also reducing vibration. It's easy to use and simplifies the process of adding or removing plastic or aluminum panels. The block provides three options to mount the panel and is slotted to accommodate a variety of panel thicknesses as well as help with aligning the block to the profile. There is an option available with an adjustable anti-rotation clip. The suggested hardware can be found below.

Quick Change Panel Clamp

Part Description:

The quick change panel clamp is made of nylon and consists of a block and clip. It requires no machining or hardware and can be used to mount a panel flush with a profile edge. The quick change panel clamp has a molded extension that acts as a T-slot stud and drops into the profile, perfect for instances where profiles are captivated. The clip secures the panel to the block while the block increases stability of the mounted panel and reduces vibration. The quick change panel clamp clip can be removed with a flat tip screwdriver which simplifies the process of adding or removing plastic panels.

Part Description:

The panel mount bracket is used to surface mount a panel to a profile and has a slotted hole which allows for greater adjustability when mounting the panel. It engages the 2-degree drop-lock feature when the assembly bolts are tightened to the required torque. The panel mount bracket is a fastening method that can be repositioned and reused. The panel requires a through hole (page 905) as well as hardware to mount the panel to the bracket, which should be based on the panel type and thickness. The suggested hardware for mounting the bracket to the T-slot can be found below.

Roll-In Panel Mount Bracket

Part Description:

The roll-in panel mount bracket is used to mount a panel flush with a profile and is designed to allow use even when profiles are captivated. The roll-in panel mount bracket is a fastening method that can be repositioned and reused. To simplify the assembly use either a drill through or a drill through and a tap (page 905). The hardware should be based on machining type and panel thickness.

Single Arm Narrow Panel Retainer

Part Description:

The single arm narrow panel retainer is used to mount a panel when it is recessed within the T-slot or on the profile frame. It is a strong fastening option that is simple to use, provides stability, and reduces vibration. The single arm narrow panel retainer is frequently used when mounting one panel to a profile or in instances when larger profile series are used to mount two panels. It requires a drill through machining service on the panel; for information on machining services see page 905.

Double Arm Narrow Panel Retainer

Part Description:

The double arm narrow panel retainer is used to mount a panel when it is recessed within the T-slot or on the profile frame. It is a strong fastening option that is simple to use, provides stability and reduces vibration. The double arm narrow panel retainer is perfect in instances when a profile is connecting two adjacent panels. It requires a drill through machining service on the panel; for information on machining services see page 905.

Single Arm Narrow Mesh Retainer

Part Description:

The single arm narrow mesh retainer is used to mount a mesh panel when it is recessed within the T-slot or on the profile frame. It provides stability and reduces vibration while also being a strong fastening option that is simple to use and can be easily repositioned. The single arm narrow mesh retainer is frequently used when mounting one mesh panel to a profile or in instances when larger profile series are used to mount two mesh panels. It has a slotted hole to allow for positioning so that the bolt doesn't crash into the mesh. The mesh retainer requires a backing plate, which can be found on page 498. The suggested hardware to mount the retainer to the T-slot is listed below while the hardware for the backing plate should be based on the panel type and thickness.

Double Arm Narrow Mesh Retainer

Part Description:

The double arm narrow mesh retainer is used to mount a mesh panel when it is recessed within the T-slot or on the profile frame. It provides stability and reduces vibration while also being a strong fastening option that is simple to use and easily repositioned. The double arm narrow mesh retainer is perfect in instances when a profile is connecting two adjacent panels. It has slotted holes to allow for positioning so that the bolts won't crash into the mesh. The mesh retainer requires backing plates, which can be found on page 498. The suggested hardware to mount the retainer to the T-slot is listed below while the hardware for the backing plates should be based on the panel type and thickness.

Double Arm Wide Mesh Retainer

Part Description:

The double arm wide mesh retainer is used to mount a mesh panel when it is recessed within the T-slot or on the profile frame. It provides stability and reduces vibration. The wide arm makes this a stronger connection that is simple to use and can be easily repositioned. The double arm wide mesh retainer is perfect in instances when a profile is connecting two adjacent panels. It has slotted holes to allow for positioning so that the bolts don't crash into the mesh. The double arm wide mesh retainer requires backing plates, which can be found on page 499. The suggested hardware to mount the retainer to the T-slot is listed below while the hardware for the backing plates should be based on the panel type and thickness.

Single Arm Narrow Mesh Retainer with Narrow Backing Plate

80/20 Inc.

Part Description:

The single arm narrow mesh retainer with narrow backing plate consists of one single arm narrow mesh retainer (page 490) and one narrow backing plate (page 498). The hardware to attach the backing plate to the retainer should be selected based on the wire mesh panel type and thickness. The suggested hardware to mount the retainer to the T-slot can be found on below.

Single Arm Wide Mesh Retainer with Wide Backing Plate

Part Description:

The single arm wide mesh retainer with wide backing plate consists of one single arm wide mesh retainer (page 492) and one wide backing plate (page 499). The hardware to attach the backing plate to the retainer should be selected based on the wire mesh panel type and thickness. The suggested hardware to mount the retainer to the T-slot can be found below.

Single & Dual Panel Holder

Part Description:

The single and dual panel holders are both zinc die-cast and provide quick and simple methods to secure panels. The pads on the holders increase the strength and help to protect the panel. The dual panel holder is frequently used in conjunction with two single panel holders to form a frameless plastic panel corner. The single panel holder is comprised of two pieces and the hardware to connect them. The dual panel holder includes the hardware to mount to the single panel holders.

Roll-in Mesh Panel Retainer

Part Description:

The roll-in mesh panel retainer is used to mount a mesh panel when it is recessed within the T-slot. It rolls into the T-slot channel and can be used when the profile ends are closed, making assembly fast and easy. The self-threading screw is included and no machining services are required. **Important:** This retainer is not intended for use with expanded metal panels.

Standard Sliding Door Glide Profile

Part Description:

The standard sliding door glide profile has a pad key that slides into a T-slot; it is commonly used to create a top rail sliding or bi-fold door. It is ideal when used with the economy sliding door glide as a bottom mount. The standard sliding door glide bolts onto the profile end and freely rotates as the door pivots. It is made of UHMW polyethylene and requires no lubrication. The standard length of the glide profile is 145" (3.683M) or can be cut to length as a standard machining service (page 860).

Upper & Lower Door Slide Track

Part Description:

The upper and lower door slide tracks snap into a T-slot with no required hardware. These tracks are used together to allow panels to be inserted after the frame is assembled. The lower slide track has a radius bearing surface that allows panels to slide easily. Both the upper and lower door slide tracks are 145" (3.683M) or can be cut to length with a standard machining service (page 860).

Roller Wheel with Ball Bearing Hub

The roller wheel with ball bearing hub is made of nylon and is reinforced with fiberglass. The ball bearing creates a smooth glide and is used to move frames, panels and components by rolling in the profile T-slot.

Roller Wheel with Permanent Lubricated Bushing

The roller wheel with permanent lubricated bushing is ideal for guided linear motion and has a bronze bushing that requires no additional lubrication. The roller wheel mounts to the profile end or T-slot and includes the mounting hardware.

Dual Roller Wheel Bracket

Part Description:

The dual roller wheel bracket is made of anodized aluminum and mounts to a T-slot profile. It is used with roller wheels to form assemblies that create door frames, linear glides, and track systems. The mounting hardware is included.

Dual Roller Wheel Bracket Assembly

Part Description:

The dual roller wheel bracket assembly mounts to a T-slot profile and includes one dual roller wheel bracket (page 517) and two roller wheels with permanent lubricated bushings or ball bearings (pages 515-516). The assembly is commonly used to create door frames, linear glides, or track systems. The mounting hardware is included.

Standard Lift-Off Hinge - Right Hand with Single Long Pin

Part Description:

The standard lift-off hinge – right hand with single long pin is made of anodized aluminum. The heavy-duty stainless steel hinge pin provides a smooth, long-lasting, strong connection. The captivated nylon thrust washer eliminates metal-to-metal contact and won't fall out. When the long pin is placed in the upper position it simplifies door assembly. Hinges with long pins are commonly used to create lift-off hinge assemblies (pages 525-527 for assembly options). The mounting hardware is included.

Standard Lift-Off Hinge - Left Hand with Single Short Pin

Part Description:

The standard lift-off hinge – left hand with single short pin is made of anodized aluminum. The heavy-duty stainless steel hinge pin provides a smooth, long-lasting, strong connection. The captivated nylon thrust washer eliminates metal-to-metal contact and won't fall out. Hinges with short pins are commonly used to create captivated assemblies (pages 525-527). The mounting hardware is included.

Bi-Fold Door Application Example

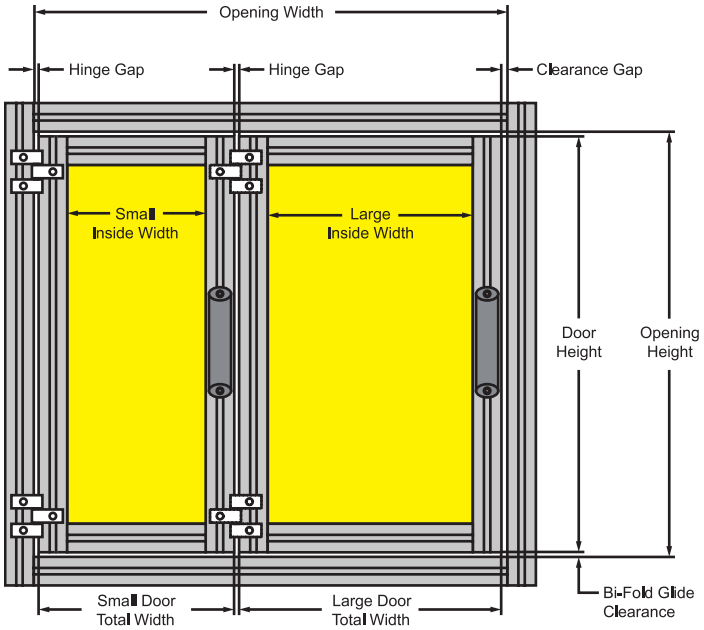
Designing a bi-fold door using 80/20® products is a straight-forward process. Simply remember to include the hinge and opening gaps when sizing the inside dimension of your door, while taking into account the profile size. Follow the steps listed and reference the drawing for the standard method of designing a bi-fold door.

Step 1: Select the profile you will use for building your bi-fold door. Typically this is the same as the frame.

Step 2: Determine the opening width of your door.

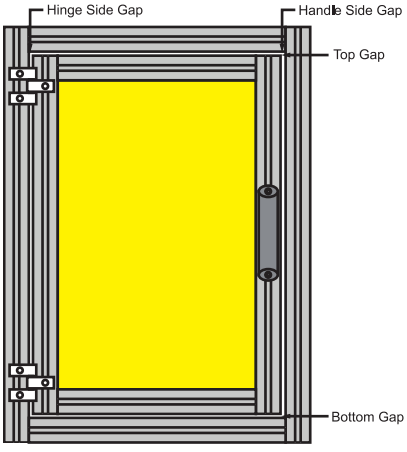
Step 3: Choose your hinge type and find the standard gap between profiles when using that hinge.

Step 4: Choose the total width for each inside door, remembering to subtract the hinge and clearance gaps.

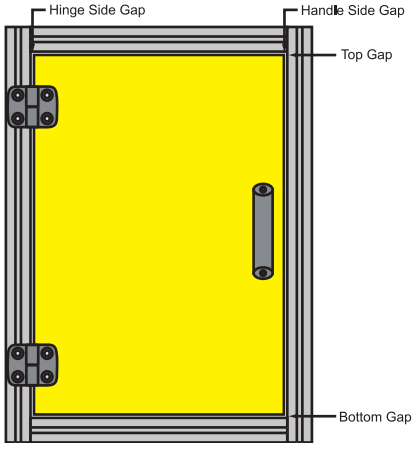


Framed & Unframed Doors

- For both framed and unframed doors the hinge side gap depends on hinge.
- Framed Doors: There is a 1/4" (6.35mm) top, bottom and handle gap. When using door gasket subtract 1/8" (3.175mm).
- Unframed Doors: There is a 1/8" (3.175mm) top, bottom and handle gap.



Framed Door



Unframed Door

Economy Lift-Off Hinge Right Hand with Long Pin

Part Description:

The economy lift-off hinge right hand with long pin is a cost-effective option made of aluminum and commonly used in lightweight doors. When the long pin is placed in the upper position it simplifies door assembly. Hinges with long pins are commonly used to create lift off hinge assemblies (page 533 for assembly options).

Economy Lift-Off Hinge Right Hand with Short Pin

Part Description:

The economy lift-off hinge right hand with short pin is a cost-effective option made of aluminum and commonly used in lightweight doors. Hinges with short pins are commonly used to create lift-off assemblies (page 533 for assembly options).

Economy Lift-Off Hinge Left Hand with Long Pin

Part Description:

The economy lift-off hinge left hand with long pin is a cost-effective option made of aluminum and commonly used in lightweight doors. When the long pin is placed in the upper position it simplifies door assembly. Hinges with long pins are commonly used to create lift off hinge assemblies (page 533 for assembly options).

Part Description:

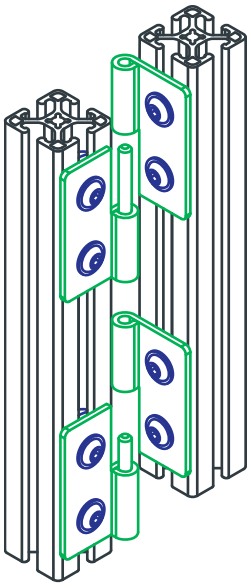
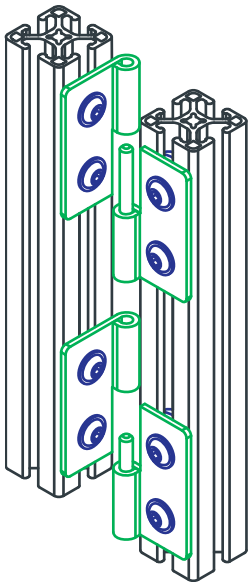
The economy lift-off hinge assembly is a cost-effective option commonly used to create lift-off hinges for lightweight doors. It is available in a right-hand and a left-hand orientation. Each assembly is comprised of two hinges; one long pin hinge and one short pin hinge.



Left Hinge: 2835, 25-2835

Left Hinge: 2836, 40-2836



Right Hinge: 2841, 25-2841

Right Hinge: 2842, 40-2842

Part No.	Series	Orientation	Material	Alloy	Finish	Process	Weight
2841	10	Right Hinge	Aluminum	5052-H32 = Leaf 6061-T6 = Pin	Clear Anodize	Milled	.090 lb

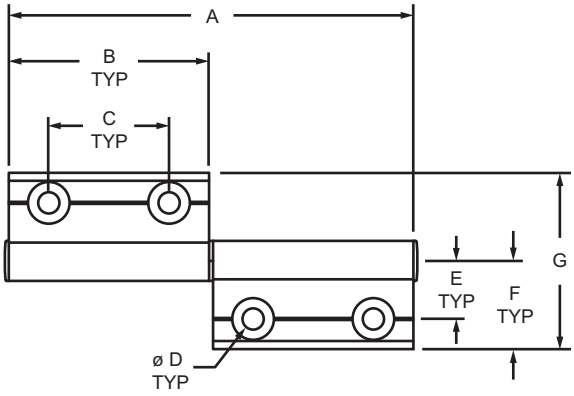
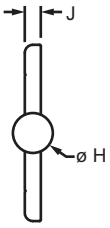
4 Hole - Concealed Hinge

Part Description:

The 4 hole - concealed hinge allows you to design doors with hidden hinges when the door is closed. The hinge mounts to the inside of the frame, which makes enclosures more secure; they are not able to be dismantled when the door is shut.





Part No.	Series	A	B	C	D	E	F	G	H	J*	Weight

Part Description:

The 4 hole - plastic lift-off hinge comes in both right and left hand options and is made of fiberglass-reinforced black nylon with a stainless steel pin. It is commonly used to connect plastic panels and lightweight doors to T-slot profiles and is available in options with slot tabs to assist with alignment.

4 Hole - Adjustable Hinge

Part Description:

The 4 hole - universal, 4 hole - vertical, and 4 hole - horizontal adjustable hinges are die cast zinc with a black powder coat finish. They are commonly used to connect T-slot profiles. As their names imply, the universal hinge has both horizontal and vertical slotted holes while the vertical hinge has vertically slotted holes and the horizontal hinge has horizontally slotted holes. The slotted holes support fastening adjustments.

Part Description:

The 4 hole - adjustable tension panel hinge is comprised of black acetal with clear polycarbonate hinge pins. It is a durable and economical option and the adjustable pins have the ability to change the pivot tension when opening or closing an access point. The 4 hole - adjustable tension panel hinge mounts plastic panels and lightweight doors to T-slots. **Important:** This hinge is not suitable for connecting multiple T-slot profiles.

4 Hole - Detent Hinge

Part Description:

The 4 hole - detent hinge is commonly used to connect plastic panels and doors to T-slot profiles. It holds doors open at 120 or 170 degrees and is especially useful in horizontal-lifting applications, as it provides hands-free access. It includes snap-on covers that hide the hardware to mount to a panel or profile as well as a detent hinge stopper (page 473) and its mounting hardware. **Important:** This hinge is not suitable for connecting multiple T-slot profiles.

4 Hole - Detent Positioning Hinge

Part Description:

The 4 hole - detent positioning hinge is commonly used to connect plastic panels to profiles or to connect two profiles together. It holds doors open at 0, 85 or 175 degrees and is especially useful in horizontal-lifting applications, as it provides hands-free access. It has snap-on covers that hide the hardware for a clean appearance.

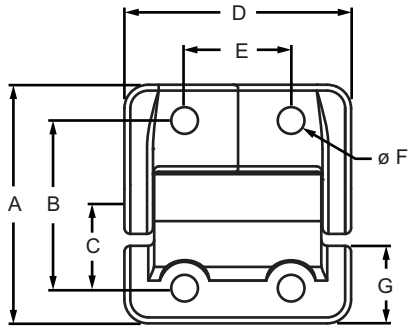
4 Hole - Constant Friction Hinge

Part Description:

The 4 hole - constant friction hinge is commonly used to connect plastic panels and doors to T-slot profiles. It holds doors open at variable angles and is especially useful for vertical-lifting smaller doors, as it provides hands-free access.



Part No.	Series	Material	Color	A	B	C	D	E	F	G	H	J	Weight

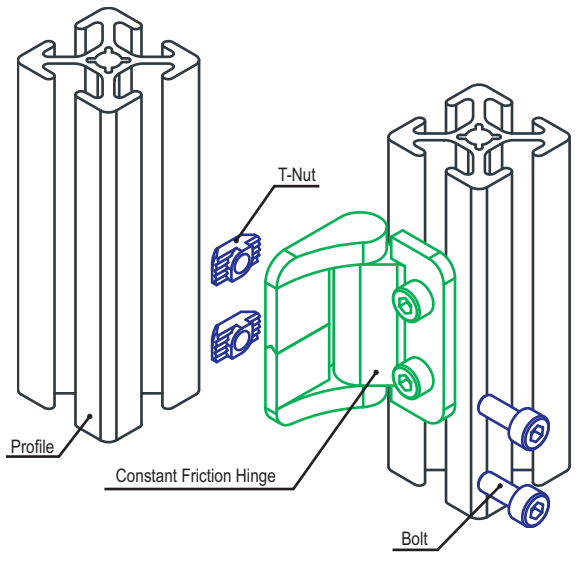
75-3558	10 25	2	M4 x 16mm SHCS	Hex Nut	11-6039



Part Description:

The 4 hole - aluminum hinge is commonly used to mount lighter weight doors or two profiles. It is a cost-effective option that is corrosion-resistant, making it useful for outdoor applications where standard hinges may rust or corrode. There are options available that can be used as a transition from 10 to 15 series or 25 to 40 series profiles.

Part Description:

The lite panel hinge is made of steel with a black powder coat. It is a cost-effective option that is commonly used to mount plastic panel doors and lightweight T-slot profiles. The slotted holes allow for greater adjustability when positioning the hinge. It includes the bolt assembly to mount to a .250" (6mm) panel. The suggested hardware to mount to a T-slot profile can be found below.

Plastic Door Handle

Part Description:

The plastic door handle is made of light yet durable high-strength glass-filled nylon. It is corrosion-resistant, lending it to both indoor and outdoor applications. The plastic door handle is designed to mount directly to a T-slot profile or can also be used with a plastic panel. See below for the suggested mounting hardware.

Part Description:

The offset plastic handle is made of fiberglass-reinforced nylon that is corrosion-resistant making it useful for both indoor and outdoor applications. It bolts directly to the T-slot profile and is ideal for bi-fold doors. One side is completely solid to prevent finger pinching and there is an orange snap-on cover included to hide the mounting screws and provide a clean look. All mounting hardware is included.

Ergonomic Plastic Handle

Part Description:

The ergonomic plastic handle is made of durable yet lightweight fiberglass-reinforced nylon. It is corrosion-resistant, lending it to both indoor and outdoor applications. The handle has an easy to grip design and an offset, closed side for finger protection. The ergonomic plastic handle mounts directly to a T-slot profile.

Flush Plastic Panel Handle

Part Description:

The flush plastic panel handle consists of a housing unit and a pull that together create a flush handle that doesn't protrude, convenient for high-traffic areas. It provides an aesthetic appearance and mounts in panels .375" (10mm) or thinner and the mounting hardware is included. A flush handle panel milling service is required which can be found on page 898.

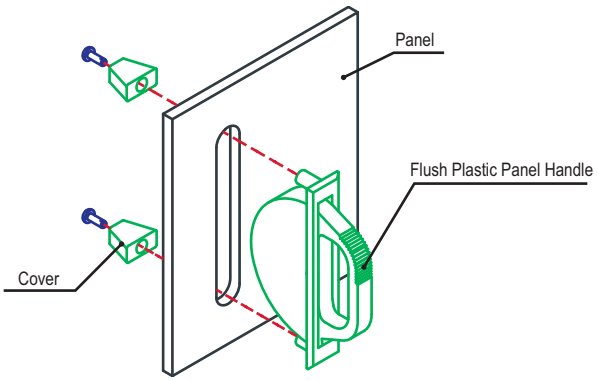
Flush Handle Plastic Panel Milling	Panel	898



Part Description:

The aluminum handle is made of clear anodized aluminum, making it a strong, lightweight option that is corrosion-resistant, lending itself to both indoor and outdoor applications. It easily mounts to the edge of a .250" (6.35mm) plastic panel and helps add rigidity. The handle is commonly used for sliding doors. It comes in three stock lengths but is available in custom lengths on page 855.

Locking Plastic Panel Grabber™ Handle

Part Description:

The locking plastic panel Grabber™ handle is comprised of a black polycarbonate slam action latch, handle, and lock, making it a high-strength option. A striker plate is also included. The slam latch engages the striker plate to help create the closing connection. The locking plastic panel Grabber handle can be opened from either side of the door and mounts to panels between .075" and .275" (2mm-7mm). The mounting hardware is included.

Deluxe Door Mating Handle

Part Description:

The deluxe door mating handle has a chrome finish which provides corrosion resistance and an aesthetic appearance. It easily attaches with a simple set screw to the stem of the deluxe door handle with pawl kit (page 567) to provide handles on both sides of a door. The deluxe door mating handle requires no machining services.

Part Description:

The furniture style handle is available in either chrome-plated or matte black options as well as a “T” or “L” shape. Choices range from locking to unlocking as well as a 90 degree counter-clockwise or clockwise rotation. It requires a furniture style handle profile milling service found on page 875. Use a pawl kit (page 571) with the furniture style handle to create a latching connection. All mounting hardware is included.

Slam Latch

Part Description:

The slam latch is a die cast aluminum handle that mounts to a T-slot door or frame from the front. It provides a compact handle that takes up only a small amount of space from the surface of the latch to the profile. The slam latch is safe against disassembly in the locked position. There are options available with both locking mechanisms keyed alike, keyed different or without a lock. No machining is required.

Grabber™ Door Catch

Part Description:

The Grabber™ door catch is made of corrosion-resistant black ABS with three different pull forces available. It is spring-loaded and mounts to a T-slot with a Grabber door catch mounting plate (page 577-578) on the inside of an enclosure to create a push to close/pull to open latch. The required hardware to mount the Grabber door catch to the plate is included. It requires a Grabber door catch clearance machining service which includes the tap.

Part Description:

The magnetic door catch is lightweight and ideal for latching plastic panels in place. It has an estimated pull force of 12 pounds (5.443 kilograms). All of the mounting hardware is included for use with a panel. The magnetic door catch requires a panel tap service to mount the striker plate to the plastic panel (page 905).
Tip: Use the magnetic door catch bracket (page 580) to latch a profile to a profile, and refer to the suggested hardware below.

Nylon Magnetic Door Catch

Part Description:

The nylon magnetic door catch consists of a latch and a striker button. The latch is made of molded black fiberglass-reinforced nylon and is a quick-catching method ideal for lightweight plastic panel doors. A panel tap is required to mount the striker button (page 905).

Single Ball Catch

Part Description:

The single ball catch is comprised of a molded black fiberglass-reinforced nylon latch and a zinc-plated steel ball. It is a quick-latching method ideal for lightweight plastic panel doors. The steel ball can latch onto either the top or the front of the catch. The single ball catch requires a panel tap service to mount the steel ball to a plastic panel (page 905).

Tension Ball Latch

Part Description:

The tension ball latch is comprised of a latch, striker plate and mounting plate. The latch tension adjusts with two spring-loaded screws allowing the striker to enter from either the front or the side. This is a strong and durable method that creates a secure connection and is ideal for latching. The hardware to attach the hinge to a T-slot is included and no machining services are required.

Economy Panel Gasket

Part Description:

Economy panel gasket is available in either a black thermoplastic elostomer or gray silicone rubber. It recesses in a T-slot to secure plastic panels, plates, and mesh and is easily inserted after a panel has been placed in the T-slot. The economy panel gasket can be ordered by the foot (meter) or in 150 foot (45.7 meter) rolls. **Tip:** Cut ends at a 45 degree angle for corner connections to avoid overlap or crashing.

Part Description:

The rubber door seal is made of black EPDM rubber which provides flexibility, making it a longer-lasting option. It has a keyed pad that presses into a T-slot. The rubber door seal is available for 15 and 40 series and is sold by the foot or in 100 foot rolls. **Important:** A minimum door gap of .250" (6.35mm) is required when using the rubber door seal.

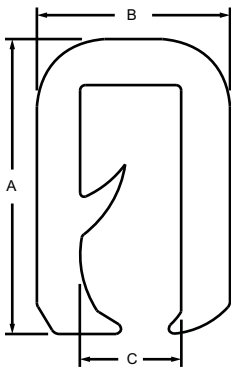
Wire Edge Cover

Part Description:

The wire edge cover is made of black flexible PVC with internal clips; it crimps on the edge of wire mesh or expanded metal panels and is ideal for creating a clean and safe guarding or enclosure access point. Wire edge cover is sold by the foot or meter.



Part No.	Series	Material	Finish	Process	Color	A	B	C	Length	Max Length	Weight

Part Description:

The aluminum door stop is a strong and long-lasting option that prevents a door from swinging too far into the frame. It is corrosion-resistant, lending it to both indoor and outdoor use.

Building the Base

Once you've got your design narrowed down it's time to start thinking about your base. There are several varieties available, from casters to furniture glides, leveling feet, or anchors. Some add movement and provide a swivel or a pivot, while others lock or reduce vibration. There are also feet that do just what their name implies; level or anchor your project. You can also choose from options that provide combinations of these features.

You'll want to consider how often your application will need to be in motion or relocated. For example, work carts are constantly moving and turning while furniture only occasionally needs repositioned. In contrast, a guard or larger machine may never need moved or only very infrequently. There may also be a need to immobilize equipment. Determining the frequency of movement will help you decide if you need a caster, a leveling foot, a glide or perhaps a floor lock or anchor.

Consider the Capacity

After you've decided on the type of foot that works best for your project, you'll want to begin narrowing down your product choices. One of the main factors will be the required load capacity. Keep in mind that the ratings are per foot; if you're using multiple bases the weight will be distributed and provide a higher overall capacity.

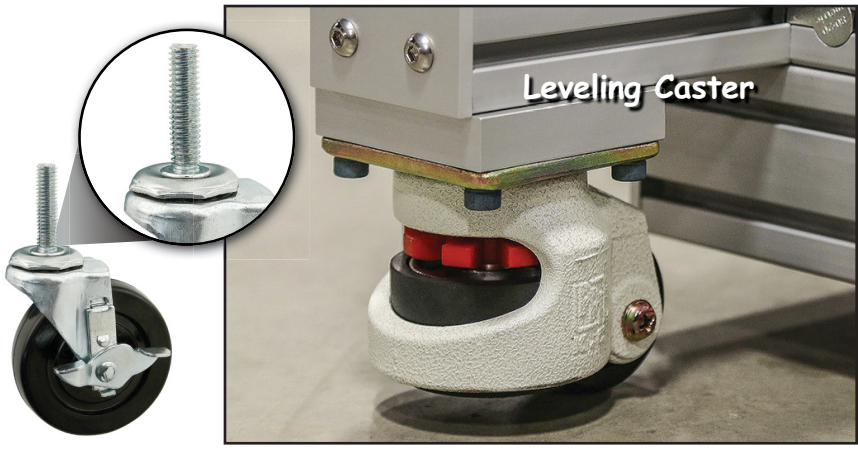
Find Your Footing

Casters, glides, bases, leveling feet and anchors are a great way to customize your application and design it to fit your specific space and purpose. There are several added features to choose from.

Caster Options

When using a caster, there are options available that swivel or remain rigid. Some of the casters also include locking mechanisms. The leveling caster is a great combination foot that incorporates both mobility and leveling features with one component.

The threaded stem swivel caster is one of many casters with or without brakes that 80/20 offers.



Leveling Feet, Glide Options

Glides, leveling feet and bases come in a wide range of varieties. There are choices suitable for different surfaces such as concrete or carpet or that provide leveling and shock-resistance. Select from options with a pad that help reduce and absorb vibration. There are also heavier and lighter-duty bases to pick from.

Options include feet that are both resistant to vibration and pivot up to 20 degrees to accommodate uneven floors.

Add Stability with a Base Plate

Many feet mount to the profile using a base plate. There are several plates available; this allows you to mount your foot anywhere along the profile T-slot or end, reducing limitations on where you can position the foot.

There are also alternatives that let you attach a foot directly to the profile end without the need for a base plate. You'll want to keep in mind that the profile will require an end tap.

Part Description:

The threaded stem swivel caster is a foot that adds mobility to an application and can mount directly to a T-slot profile end, or to the profile side using a base plate. There are options available with a side or top mount brake kit as well as varieties without a brake. The swivel enables easy movement and pivot turns. It is oil resistant, making it ideal for use in industrial settings such as mobile carts and workstations. For end tap services refer to page 861. For base plate options see pages 638-643 and 653-654.

Furniture Style Caster

Part Description:

The furniture style caster is a foot that adds mobility to an application and can mount directly to a T-slot profile end, or to the profile side or end using a base plate. There are options available with or without brakes. The Quick Frame caster connects to a tube profile using a connector (see pages 435-436). The furniture style caster works well in office and home solutions such as desks and furniture. For base plate options see pages 638-643 and 653-654. For end tap services refer to page 861.

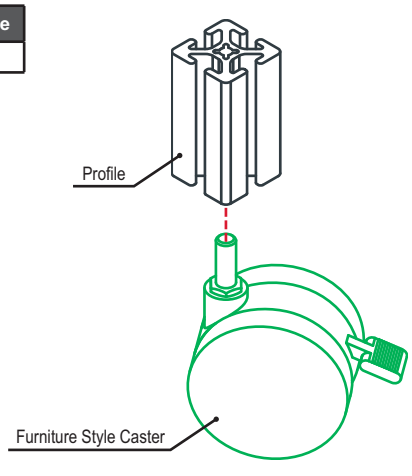
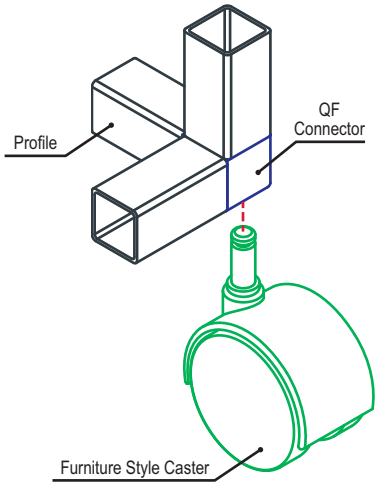
End Tap	Mounting Profile	861





Part Description:

The flange mount swivel caster is a foot that adds mobility to an application and commonly mounts to the T-slot profile end or side using a base plate. The swivel enables easy movement and pivot turns. There are options available with a side or front mount brake kit; the side brake locks only the wheel while the front brake locks both the wheel and the swivel motion. This is ideal for use in industrial settings such as mobile carts and material handling solutions. For base plate options see pages 631-632.

Triangular Top Plate Caster

Part Description:

The triangular top plate caster is a foot that adds mobility to an application and can mount directly to a T-slot profile without a base plate. The slotted holes allow for easy positioning along the profile. The swivel enables easy movement and pivot turns, while the locking tab stops the wheel and the swivel rotation when depressed. The triangular shape provides additional clearance, making it ideal for use in tight spaces.

Deluxe Flange Mount Rigid Caster

Part Description:

The deluxe flange mount rigid caster is a foot that adds mobility to an application and commonly mounts to the T-slot profile end or side using a base plate. The polyurethane wheels and hardened raceways enable a smooth motion. It is ideal for use in industrial settings such as mobile carts and material handling solutions. For base plate options see pages 631-632.

Part Description:

The heavy-duty flange mount swivel caster is a foot that adds mobility to an application and commonly mounts to the T-slot profile end or side using a base plate. The swivel enables easy movement and pivot turns while the design allows for quick access to lubrication fittings. It is a heavy-duty and oil resistant option with a higher ground clearance. It's ideal for use in industrial settings such as large workstations and material handling solutions. For base plate options see page 633.

Part Description:

The high-capacity swivel caster is a foot that adds mobility to an application and commonly mounts to the T-slot profile end or side using a base plate. It is made for higher loads and provides smooth rolling movement, enabling easy turns. The polyurethane wheel is resistant to machining chips from the floor. The wheel has a capacity of up to 1000 pounds (453.59 kilograms), making it ideal for use in industrial settings such as mobile carts and material handling solutions. For base plate options see page 633.

Part Description:

The leveling caster is a foot that incorporates both leveling features and mobility with one component. It is commonly mounted to the end or side of a T-slot profile with a base plate. The leveling caster is available in four sizes. It is ideal for large machine and automation frames. For base plate options see pages 634-635.

Adjustable Position Floor Lock

Part Description:

The adjustable position floor lock uses a spring-loaded rubber foot pad to immobilize equipment. It is commonly used to keep frames from shifting and has a foot that can adjust up to 2.75" (69.85mm), allowing greater design flexibility. The adjustable position floor lock has a foot release lever and commonly mounts to a T-slot profile side using a position floor lock base plate. There is a minimum weight requirement of 70 pounds (31.75 kg) necessary to properly immobilize equipment. By adjusting the tension nut, the holding force can be increased from 70 pounds (31.75 kg) to 120 pounds (54.43 kg). For base plate options see pages 636-637.

Part Description:

The standard floor glide is made of black nylon and has a 100 pound (45.36 kilogram) load capacity. The non-corrosive threaded stem can mount directly to the T-slot profile end or to the side or end using a base plate. It is a medium-duty foot that works well on carpet or tiled areas, making it ideal for home and office furniture, desks, stands and tables.

Economy Floor Glide

Part Description:

The economy floor glide is nickel-plated with a non-abrasive nylon base. It can mount directly to the T-slot profile end or to the side or end using a base plate. It is a medium-duty foot with load capacity options ranging from 250-500 pounds (113-227 kilograms). It works well on a variety of surfaces such as concrete or carpet, making it ideal for industrial, office, or home solutions.

Part Description:

The large base glide is a foot with load capacity options ranging up to 5000 pounds (2175 kilograms). It mounts with a base plate and works well for leveling heavier applications. The large base diameter creates maximum surface area while allowing a 15 degree swivel in all directions, making it perfect for industrial applications. The glide includes punch out mounting holes for anchoring or bolting to the floor, great for guards and machine frames. See more about floor anchors on page 625. For information on base plates see pages 638-643 and 653-654.

Mighty Mount®

Part Description:

The Mighty Mount® is a foot with a high level of vibration and shock isolation. It has a non-skid elastomer pad with load capacities ranging from 300-4200 pounds and 136-453 kilograms. The Mighty Mount® has a powder coated safety-yellow steel housing and is a heavy-duty option, perfect for industrial applications such as machine framing, automation solutions, and guards. It is recommended for use with leveling anchor base plates (pages 644-647).

Part Description:

The economy anti-vibration mount is a foot that pivots 20 degrees to accommodate uneven floors. It has a rubber pad to provide resistance to vibration, making it useful for high-precision projects or computerized machinery. There are options available with load capacities ranging from 200-1250 pounds and 23-148 kilograms. For information on base plates see pages 638-643 and 653-654. **Additional Information:** The economy anti-vibration mount comes with a jam nut.

Deluxe Leveling Foot

Part Description:

The deluxe leveling foot has a jam nut that allows it to pivot 20 degrees to accommodate uneven floors. There are options available with load capacities ranging from 1000-7400 pounds and 317-3357 kilograms. The deluxe leveling foot is a heavy-duty option ideal for large structures. For information on base plates see pages 638-643 and 653-654.

Part Description:

The economy leveling foot includes a jam nut to accommodate uneven floors. It is a cost-effective option ideal for heavy-duty projects. There are options available with load capacities ranging from 1050-4700 pounds (475-2130 kilograms). The economy leveling foot can be mounted directly to a profile end or to the side or end with a base plate (pages 638-643 and 653-654). For tapping services see page 861.

Swivel Foot Base

Part Description:

The swivel foot base is made of stainless steel. It is a heavy-duty leveling foot with a rubber pad that provides resistance to vibration, making it useful for precision applications. There are load capacity options available ranging from 4400-8800 pounds (1995.80-3991.61 kilograms). The swivel foot base requires a threaded stem; see pages 620-621.

Part Description:

The swivel foot base with mount holes is made of stainless steel. It is a heavy-duty leveling foot with a rubber pad that provides resistance to vibration, making it useful for precision applications. There are options available with load capacities ranging from 6600-8800 pounds (2993.71-3991.61 kilograms). The holes enable mounting of the fixture directly to a concrete floor. See page 625 for information on floor anchors. It requires a threaded stem; see pages 620-621.

Swivel Foot Extended Base

Part Description:

The swivel foot extended base is a heavy-duty leveling foot with a powder coat which provides extra durability. The extension includes a through-hole to secure directly to a solid concrete floor with a wedge floor anchor (page 625). This base requires a swivel foot threaded stem (page 620-621).

Part Description:

The swivel foot trapezoid base is a heavy-duty leveling foot with a rubber pad that provides resistance to vibration, making it useful for precision applications. It has a powder coat which provides extra durability. The swivel foot trapezoid base requires a threaded stem; see pages 620-621.

Trapezoid Base Anchor

Part Description:

The trapezoid base anchor is used with the swivel foot trapezoid base (page 623) to securely hold an application in place when used with wedge floor anchors (page 625). It is commonly used when adding to a preexisting build or in instances where the application will need to be moved, for example, when maintenance will be required. It enables repositioning without having to detach the anchor.

Die-Cast Floor Bracket

Part Description:

The die-cast floor bracket is used with wedge floor anchors (page 625) to secure a fixture directly to a solid concrete floor. It has a black powder-coat finish that helps add durability. The die-cast floor bracket mounts directly to a T-slot profile.

Part Description:

The adjustable die-cast floor bracket is used with wedge floor anchors (page 625) to secure a fixture directly to a solid concrete floor. It has a black powder-coat finish that helps add durability. The bracket includes a screw and stop plate that enables it to be adjusted up and down without having to lift the entire fixture. The adjustable die-cast floor bracket mounts directly to a T-slot profile.

Steel Floor Bracket

Part Description:

The steel floor bracket is zinc-plated and attaches directly to a T-slot profile with the suggested hardware (see chart below). Use wedge anchors (pages 625) to mount the bracket directly to a concrete floor. The design of the steel floor bracket is compact, making it perfect in tight or smaller locations.

Part Description:

The aluminum floor bracket is a strong, die-cast option that attaches directly to a 45-series profile with the suggested hardware (see chart). The slot tab enables easy alignment. This bracket is commonly used with wedge anchors (page 625) to mount directly to a concrete floor.

Heavy-Duty Flange Mount Caster Base Plate

Part Description:

The heavy-duty flange mount caster base plate is made of anodized aluminum to withstand daily use and wear and tear. It bolts to a profile end or side and is commonly used to mount casters with high load capacities for an added layer of strength and durability. The heavy-duty flange mount caster base plate requires a tap (page 861) to mount to the profile end.

3 Hole - Center Tap Base Plate

Part Description:

The 3 hole – center tap base plate is made of anodized aluminum to withstand daily use and wear and tear. It mounts leveling feet and threaded stem casters, and is commonly used on a rectangular profile end to center mount the foot or caster. The 3 hole – center tap base plate can also be used on a profile side. It requires a tap (page 861) to mount to a profile end.

4 Hole - Offset Tap Base Plate

Part Description:

The 4 hole – offset tap base plate is made of anodized aluminum to withstand daily use and wear and tear. It mounts leveling feet and threaded stem casters to a profile end or side for an added layer of strength and durability. The offset provides clearance for the threaded stem providing a greater clearance area. It requires a tap (page 861) to mount to a profile end.

2 Hole - Leveling Anchoring Base Plate

Part Description:

The 2 hole – leveling anchoring base plate is made of anodized aluminum to withstand daily use and wear and tear. It mounts to a profile end and provides an offset hole that allows a leveling foot and floor anchor to be used at the same time. The extension pin helps align the base plate within the T-slot to keep the profile from rotating. A tap is required (page 861) to mount to the profile end.

Floor Mount Base Plate

Part Description:

The floor mount base plate is made of anodized aluminum to withstand daily use and wear and tear. It has two upright plates that support the sides of the profile and enable vertical adjustments.The mount also has anchoring slots to bolt the frame to the floor; the slots allow lateral adjustments.

Economy Floor Mount Base Plate

Part Description:

The economy floor mount base plate is made of anodized aluminum to withstand daily use and wear and tear. It bolts directly to the T-slot to allow vertical adjustments and is designed with countersunk holes to incorporate floor anchors.

Slotted Economy Floor Mount Base Plate

Part Description:

The slotted economy floor mount base plate is available in clear or black anodized aluminum to withstand daily use and wear and tear. It has slotted holes to assist with positioning and adjustments, making it a common choice for use with Ready Tube®. The base plate is designed with a countersunk hole to incorporate floor anchors.

Part Description:

The 3 hole – die-cast center tap base plate has a black powder coat finish. It mounts leveling feet and threaded stem casters, and is commonly used on a rectangular profile end to center mount the foot or caster. This base plate can also be used on a profile side. It requires a tap (page 861) to mount to a profile end. **Additional Information:** When using an M12 socket head cap screw (SHCS) the base plate can only be mounted to the profile end.

5 Hole - Die-Cast Center Tap Base Plate

Part Description:

The 5 hole – die-cast center tap base plate has a black powder coat finish. It mounts leveling feet and threaded stem casters, and is commonly used on profiles with eight slots to center mount the foot or caster. This base plate can also be used on a profile side. It requires a tap (page 861) to mount to a profile end. **Additional Information:** When using an M12 socket head cap screw (SHCS) the base plate can only be mounted to the profile end.

Linear Bearing Concept

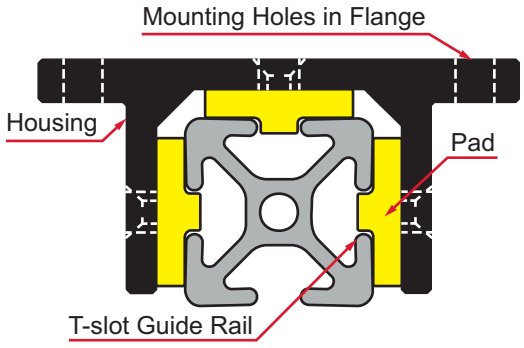
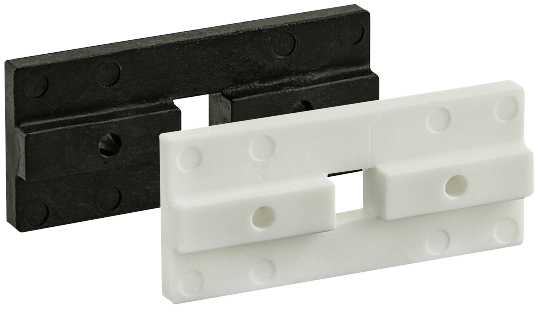
Linear bearings enable you to add repeated motion and movement to your project. As an example, linear bearings are commonly found in material transportation applications such as picking tools.

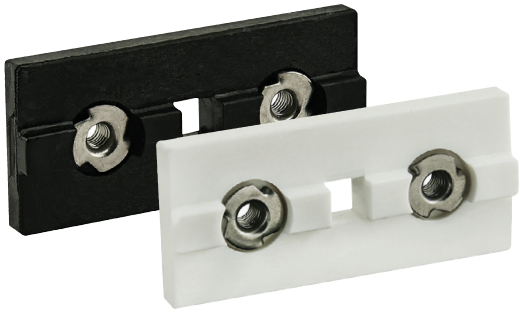
The core concept is that profiles act as guiderails and pads are inserted into the T-slot to enable movement. Pads are available in two options: standard or high-cycle.





Standard Pad

Perfect for solutions such as drawer glides, table saw fences, ergonomic workstations or adjustable stands. All pads are available in white and black styles.

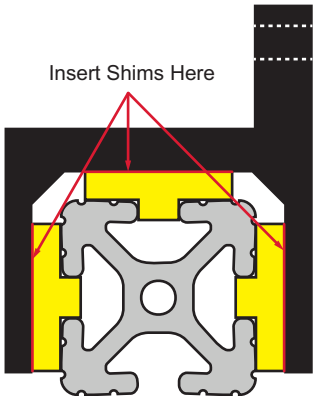


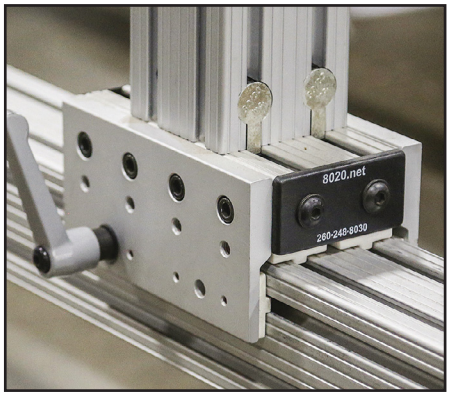
High-Cycle Pad

These bearings have a special threaded insert designed for sudden acceleration and deceleration without deteriorating. This durable pad lends itself to actuators and parts-transfer equipment.

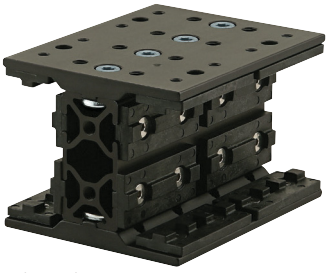
Linear Bearing Shims

Linear bearing shim stock is used to create a precise fit. Each shim is .005 inches (.127mm) thick and has a slotted design that enables easy installation without having to dismantle the bearing; simply loosen the bearing pad and slide the shim(s) between the pad and housing while the bearing is still in place. Shims are sold in packs of 10 and are compatible with all 80/20 bearings.



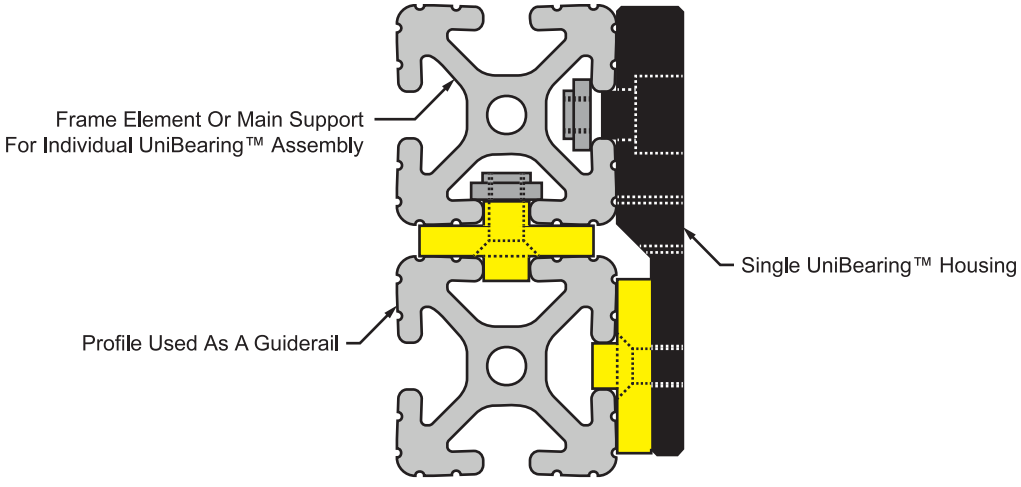


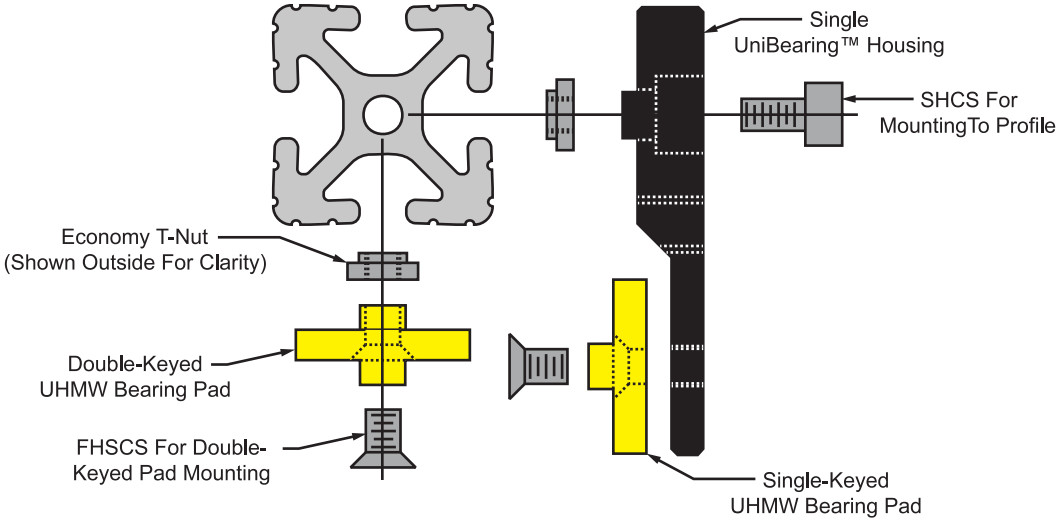
UniBearing™ Concept



80/20 offers a custom UniBearing™. It differs from the traditional linear bearing in that it is adjustable for a range of profiles and can be installed even when a T-slot profile is captivated.

These are easily integrated into existing structures and are commonly used in applications such as automation equipment or guards that require frequent movement.





3 Slot Mount - Single Flange Short Standard Linear Bearing

Part Description:

The 3 slot mount – single flange short standard linear bearing with or without brake holes is typically used in linear motion applications. It houses profiles with a minimum of three open T-slots, has a single flange and is a shorter option. The bearing includes pads, screws and shims; the pads are made of self-lubricating UHMW. All 80/20 bearings are designed for compression loads only and not intended to support hanging loads.

3 Slot Mount - Double Flange Long Standard Linear Bearing

Part Description:

The 3 slot mount – double flange long standard linear bearing with or without brake holes is typically used in linear motion applications. It houses profiles with a minimum of three open T-slots, has a double flange and is a longer option. The bearing includes pads, screws and shims; the pads are made of self-lubricating UHMW. All 80/20 bearings are designed for compression loads only and not intended to support hanging loads.

4 Slot Mount - Double Flange Long Standard Linear Bearing

Part Description:

The 4 slot mount – double flange long standard linear bearing with or without brake holes is typically used in linear motion applications. It houses profiles with a minimum of four open T-slots, has a double flange and is a longer option. The bearing includes pads, screws and shims; the pads are made of self-lubricating UHMW. All 80/20 bearings are designed for compression loads only and not intended to support hanging loads.

3 Slot Mount - Single Flange Short High-Cycle Linear Bearing

Part Description:

The 3 slot mount – single flange short high-cycle linear bearing is typically used in linear motion applications. It contains special threaded inserts in the pads which provide a heavy-duty bearing, with or withouth holes, capable of withstanding repetitive cycles with sudden acceleration and deceleration. The bearing houses profiles with a minimum of three open T-slots, has a single flange and is a shorter option. The pads, screws and shims are included; the pads are made of self-lubricating UHMW. All 80/20 bearings are designed for compression loads only and not intended to support hanging loads.

3 Slot Mount - Double Flange Short High-Cycle Linear Bearing

Part Description:

The 3 slot mount – double flange short high-cycle linear bearing with or without brake holes is typically used in linear motion applications. It contains special threaded inserts in the pads which provide a heavy-duty bearing capable of withstanding repetitive cycles with sudden acceleration and deceleration. The bearing houses profiles with a minimum of three open T-slots, has a double flange and is a shorter option. The pads, screws and shims are included; the pads are made of self-lubricating UHMW. All 80/20 bearing are designed for compression loads only and not intended to support hanging loads.

Single Short UniBearing™

Part Description:

The single short UniBearing™ has an open design that enables customized layouts. It is an option that is commonly used in applications with one guiderail. The UniBearing™ is easy to quickly install or remove without taking it apart, allowing reduced retooling and downtime and increased productivity and flexibility. The pads are mounted using stainless steel flathead socket cap screws that secure it to the housing and eliminate the need for high-cycle pads. The bearing can move or be fixed; when fixed, it allows the guardrail and assembly to move. All UniBearings™ come with pre-drilled brake holes and tapped mounting holes that enable attachment of accessories to a flat surface.

Short - Single Mount Unibearing™ Assembly

Part Description:

The short – single mount UniBearing™ assembly is commonly used for linear motion applications and is comprised of a short single mount UniBearing™ that is attached to a T-slot profile. There are pre-tapped holes in the profile ends as well as in the housing unit for connecting accessories. Shim kits are included.

Engineering Specifications on UHMW-PE Bearing Pads

Property	Test Method	Unit	Typical Value
Specific Gravity	ASTM D-792	g/cm3	0.94
Yield Strength @ 73°F	ASTM D-638	p.s.i.	3400
Ultimate Tensile Strength @ 73°F	ASTM D-638	p.s.i.	6800
Break Elongation @ 73°F	ASTM D-638	%	450
Yield Strength @ 250°F	Stress Strain Diagram	p.s.i.	700
Ultimate Tensile Strength @ 250°F	Stress Strain Diagram	p.s.i.	3300
Break Elongation @ 250°F	Stress Strain Diagram	%	900
Hardness - Rockwell "R" Scale	ASTM D-785	-	64
- Shore "D" Scale	ASTM D-2240	-	67
Flexural Modulus of Elasticity	Bend Creep/1 min. value	p.s.i.	110,000
Shear Strength	ASTM D-732	p.s.i.	3500
Izod Impact @ + 23°C	ASTM D-256A	ft-lbs/in. notch	No break
@ - 140° C	ASTM D-256A	ft-lbs/in. notch	No break
Environmental Stress Cracking @ F50	ASTM D-1693 Mod	hrs.	6000
Water Absorption	ASTM D-570	-	NIL

Abrasive Resistance - Sand Slurry Test

- **Each material listed below was rotated 24 hours @ 1750 r.p.m.**
- **Carbon Steel = abrasive rating of 100.**
- **The weight loss for each material is relative to 100.**
- **The lower the figure, the better the abrasive resistance.**
- **50-50 sand/water slurry.**

Material	Rating
UHMW-PE	15
Nylon	31
High MW polyethylene	44
TFE	72
Stainless steel	84
Polypropylene	87
Polycarbonate	96
Hi carbon steel	100
Polyacetal	110
TFE/glass fiber	113
Normal MW polyethylene	125
Phosphor bronze	193
Yellow brass	409
Phenolic laminate	571
Hickory wood	967

Coefficient of Friction

UHMW-PE polymer has a lower coefficient of friction than glass. Its self-lubricating characteristics make it an ideal material for bearings, bushings, valves, wear strips, or any application where sliding contact is encountered.

Materials	Static	Kinetic	Test Method
Aluminum* vs. UHMW-PE	0.12	0.016	ASTM D-1894
Mild Steel vs. Mild Steel	0.30 - 0.40	0.25 - 0.35	
Mild Steel vs. UHMW-PE	0.15 - 0.20	0.12 - 0.20	
UHMW-PE vs. UHMW-PE	0.20 - 0.30	0.20 - 0.30	

*Anodized 204 R1 Spec on extruded aluminum

Comparison of Dynamic Coefficient of Friction on Polished Steel

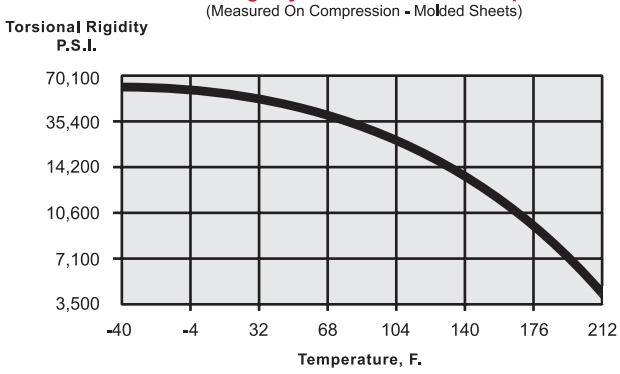
Property	UHMW-PE
Dry	0.10 - 0.22
Water	0.05 - 0.10
Oil	0.05 - 0.08

FDA and USDA Approved

Load Bearing Properties of UHMW-PE

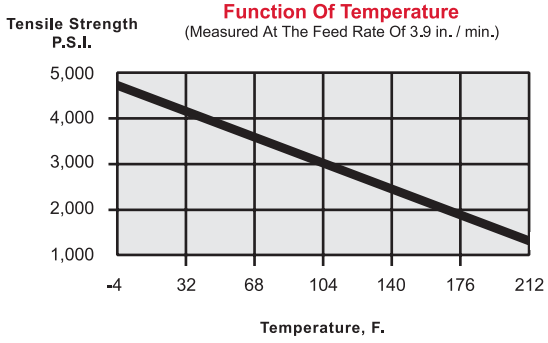
Torsional Rigidity As A Function Of Temperature

(Measured On Compression - Molded Sheets)



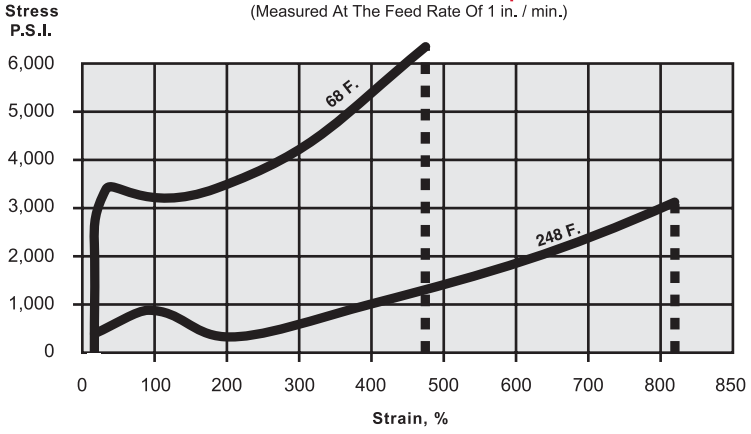
Tensile Strength At The Yield Point As A Function Of Temperature

(Measured At The Feed Rate Of 3.9 in. / min.)



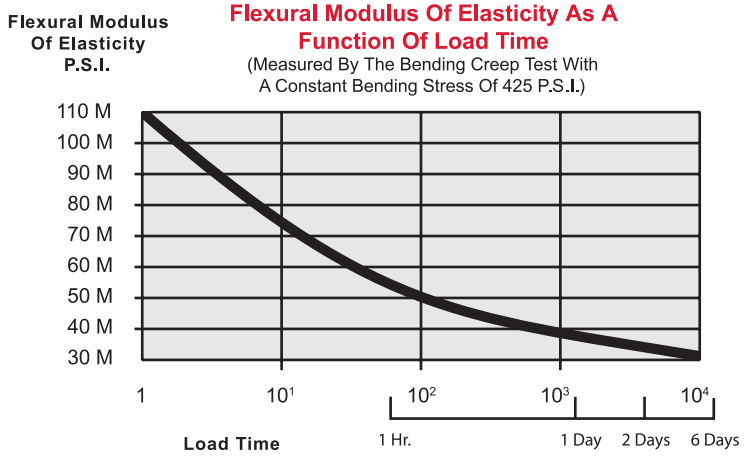
Stress - Strain At Various Temperatures

(Measured At The Feed Rate Of 1 in. / min.)



Flexural Modulus Of Elasticity As A Function Of Load Time

(Measured By The Bending Creep Test With A Constant Bending Stress Of 425 P.S.I.)



Chemical Resistance of UHMW-PE

TEST SPECIMENS	Dumb-bell type
DURATION OF TEST	30 Days
+ = RESISTANT	Mechanical properties not appreciably affected
/ = LIMITED RESISTANT	Decreases in yield stress and ultimate tensile strength less than 20%
- = NOT RESISTANT	Decreases in yield stress and ultimate tensile strength greater than 20%

Single-Keyed Standard Linear Bearing Pad

Part Description:

The single-keyed standard linear bearing pad is commonly used with bearings to create linear motion and is made of self-lubricating UHMW. It has a low coefficient of friction and is designed with rounded corners on the molded pad, allowing simple installation and replacement. This pad is available in black or white and has a single key; it comes with holes for mounting hardware and brake kits.

Part Description:

The single-keyed high-cycle linear bearing pad is a higher strength pad ideal for quick acceleration and deceleration linear motion applications. It is made of self-lubricating UHMW and has a low coefficient of friction. The design includes rounded corners on the molded pad, allowing simple installation and replacement. This pad is available in black or white and has a single key and mounts to the housing using steel flathead socket cap screws that have Loctite®. It comes with holes for mounting hardware or brake kits and includes nutserts.

T-Slot Insert Linear Bearing Pad

Part Description:

The T-slot insert linear bearing pad is commonly used with bearings to create linear motion and is made of self-lubricating white UHMW. It has a low coefficient of friction and is designed with rounded corners on the molded pad, allowing simple installation and replacement. This pad is designed to slide into, and stabilize within, the T-slot. It comes with holes for mounting hardware and brake kits.

Single-Keyed Standard Bearing Pad Profile

Part Description:

The single-keyed standard bearing pad profile can be cut to your desired length. It has a key on one side of the pad and is commonly used to create custom bearings for linear motion applications. It is made of easily machined, self-lubricating UHMW, and has a low coefficient of friction. This pad profile is available in black or natural. See page 860 for the cut-to-length machining service.

Cut to Length	Bearing Pad Profile	860

Part Description:

Linear bearing shim stock is used to create a precise fit. Each shim has a slotted design that enables easy installation without having to dismantle the bearing; simply loosen the bearing pad and slide the shim(s) between the pad and housing while the bearing is still in place. Shims are sold in packs of 10 and are compatible with all 80/20 bearings. See page 660 for more information on shims.

"L" Handle Linear Bearing Brake Kit

Part Description:

The "L" handle linear bearing brake kit adds an adjustable stop to any brake-ready bearing by securing it into a semi-permanent position. It also adds a grip to aid with adjustments and provides secure lockdown capability for safety. It's available in black, gray, blue, red, or safety yellow to match your application. All mounting hardware is included.

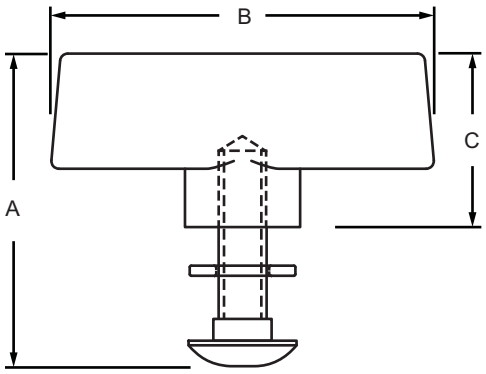
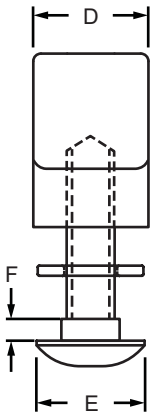
*Includes drop-in t-nut Part No. 13173

Part Description:

The "T" handle linear bearing brake kit adds an adjustable stop to any brake-ready bearing by securing it into a semi-permanent position. It also adds a grip to aid with adjustments and provides secure lockdown capability for safety. All mounting hardware is included.





Part No.	Series	Material	Finish	Color	A	B	C	D	E	F	Weight
6801	15	Steel / Polyproylene	Zinc / Matte	Black	2.036"	2.491"	1.130"	.750"	.703"	.150"	.086 lb

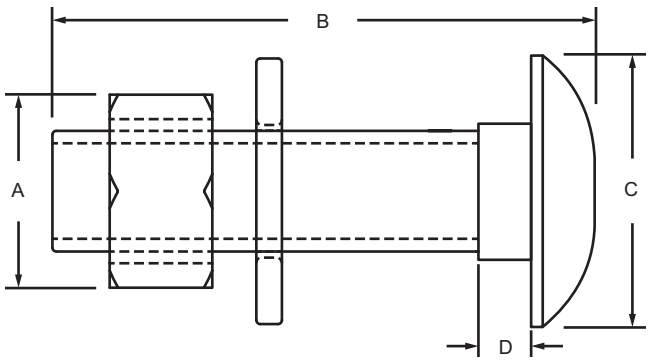
Hex Nut Linear Bearing Brake Kit

Part Description:

The hex nut linear bearing brake kit adds an adjustable stop to any brake-ready bearing by securing it into a semi-permanent position. It provides secure lockdown capability for safety and is compact, taking up little space. All mounting hardware is included.



Part No.	Series	Material	Grade	Process	Finish	Color	A	B	C	D	Weight

Axial Motion: 0° to 180°

Dynamic pivots are typically used to create axial motion ranging from 0-180 degrees. There are also assemblies available to limit the range of motion from 0-90 degrees. You'll commonly find dynamic pivots in tooling arms, displays and computer stands.

All dynamic arms and brackets come with permanently lubricated bronze bushings for long-lasting and repeated movement.

Dynamic Pivot Components

Dynamic pivot assemblies include a pivot nub and connect to the profile using either "L" arms, straight arms, or brackets. These arms have permanently lubricated bronze bushings that act as a high-strength pivot point and reduce maintenance time and cost.

Repositioning Your Pivot

If you will be repositioning your dynamic pivot frequently, consider adding a handle to help simplify and speed up the process. Dynamic pivots are long-lasting and there are a variety of assembly combinations available that allow you to fold or rotate the profiles to fit your specific needs.

0 Degree Dynamic Pivot Nub

Part Description:

The 0 degree dynamic pivot nub is commonly used as a connection hub for dynamic pivots to create full axial motion ranging from 0-180 degrees parallel to the mounting profile. The 0 degree dynamic pivot nub requires no machining services and can be easily assembled, lending itself to repositioning and reuse. The hardware to mount the nub to a profile is included while the suggested mounting hardware to attach the arm to the nub can be found below.

"L" Dynamic Pivot Arm

Part Description:

The "L" dynamic pivot arm is commonly used in assemblies to create a dynamic pivot; it provides a long-lasting connection and requires no machining services. The pivot arm can be easily assembled, lending itself to repositioning and reuse and has a permanently lubricated bronze bushing that acts as high-strength pivot point. The hardware to mount the pivot arm to the profile is included while the suggested hardware to connect the pivot arm to the nub can be found below. **Tip:** Pre-load your hardware prior to connecting profiles to simplify your assembly and save time.

Standard 0 Degree Dynamic Pivot Assembly with Dual Straight Arms

Part Description:

The standard 0 degree dynamic pivot assembly with dual straight arms is typically used to create dynamic pivots that are parallel to the mounting profile and have full axial motion ranging from 0-180 degrees. The assembly includes one 0 degree dynamic pivot nub and two standard straight dynamic pivot arms. It has permanently lubricated bronze bushings that act as high-strength pivot points and nylon thrust washers that protect the pivot arms. This assembly offers a high load capacity while ensuring a long life cycle. A shim kit and the hardware to connect the nub to the profile, the nub to the arms, and the arms to the profile are all included.

Standard 0 Degree Dynamic Pivot Assembly with Straight and "L" Arm

Part Description:

The standard 0 degree dynamic pivot assembly with straight and "L" arm is typically used to create dynamic pivots that are parallel to the mounting profile and have full axial motion ranging from 0-180 degrees. The assembly includes one 0 degree dynamic pivot nub, one standard straight dynamic pivot arm, and one "L" dynamic pivot arm. It has permanently lubricated bronze bushings that act as high-strength pivot points and nylon thrust washers that protect the pivot arms. This assembly offers a high load capacity while ensuring a long life cycle. The hardware to connect the nub to the profile, the nub to the arms, and the arms to the profile are all included.

Right Angle Universal Dynamic Pivot Assembly with Dual "L" Arms

Part Description:

The right angle universal dynamic pivot assembly with dual "L" arms is typically used to create either a perpendicular or parallel dynamic pivot with full axial motion ranging from 0-90 degrees. The assembly includes one universal dynamic right angle pivot nub and two "L" dynamic pivot arms. It has permanently lubricated bronze bushings that act as high-strength pivot points and nylon thrust washers that protect the pivot arms. This assembly offers a high load capacity while ensuring a long life cycle. The hardware to connect the nub to the profile, the nub to the arms, and the arms to the profile are all included.

90 Degree Left Hand Pivot Bracket Plate

Part Description:

The 90 degree left hand pivot bracket plate is commonly used to add motion to certain elements of your project. The plate provides a full 90 degrees of axial motion and has a permanently lubricated bronze bushing that acts as high-strength pivot point. See below for the suggested hardware to mount the plate to a profile.

90 Degree Wide Double Pivot Bracket Assembly with "L" Handles

Part Description:

The 90 degree wide double pivot bracket assembly with "L" handles is commonly used to add motion to certain elements of your project. It is comprised of one 90 degree left hand pivot bracket, one 90 degree right hand pivot bracket, two "L" handles, and one universal structural pivot nub. The shoulder bolt and nylon thrust washers are also included. The brackets have permanently lubricated bronze bushings that act as high-strength pivot points. It offers a high load capacity while ensuring a long life cycle.

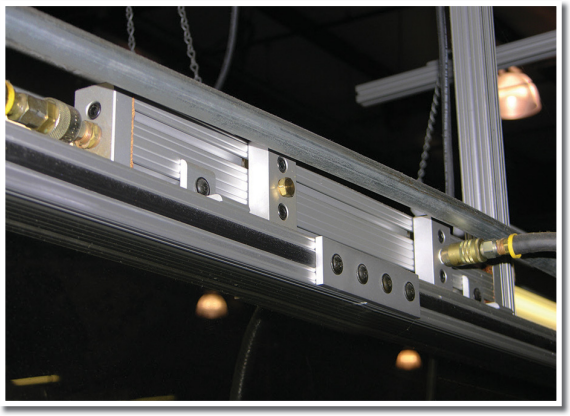
Introduction to Pressure Manifolds

Manifolds are used to add a pressurized substance, such as liquids or air, into the center cavity of a T-slot profile. You'll commonly find this in material handling processes, such as work and assembly stations, because the pressurized profile allows you to incorporate pneumatic tools directly into the work area.

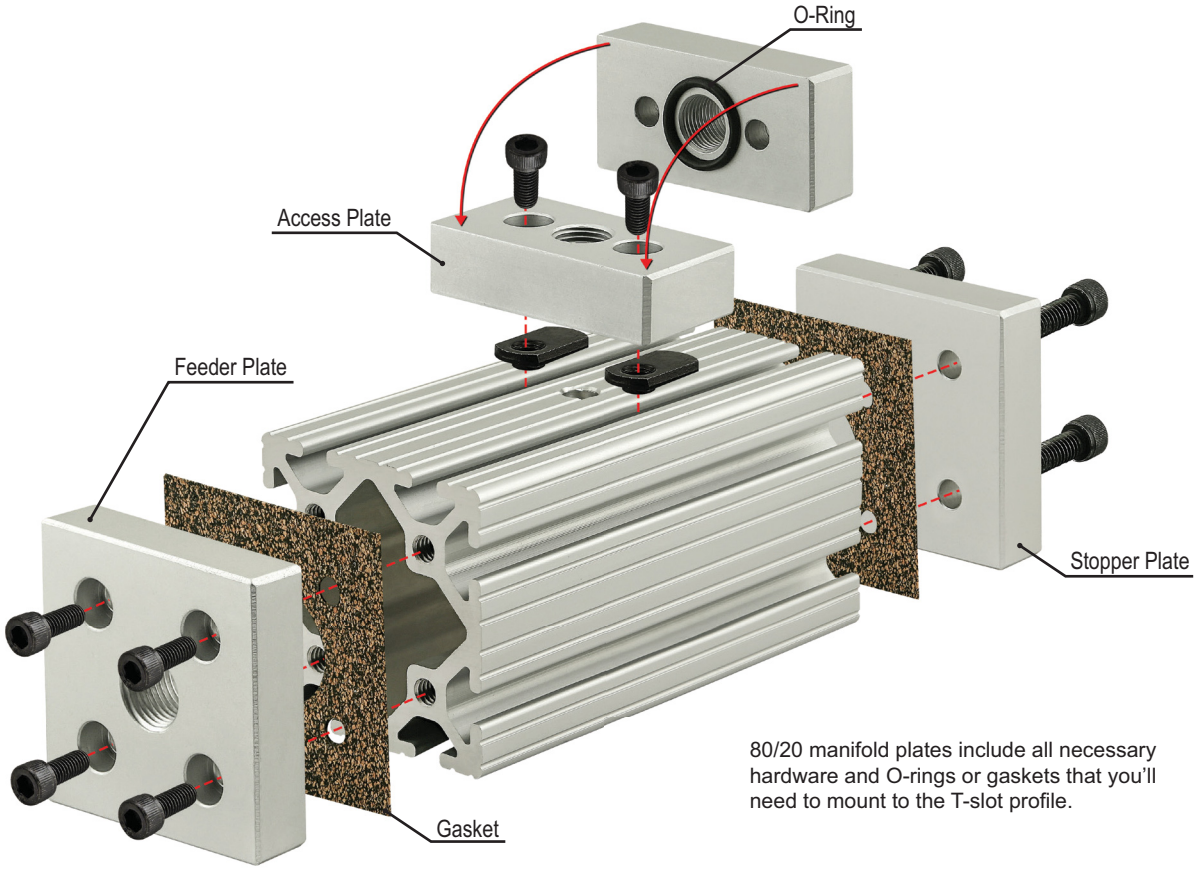
There are a range of access, feed, and stopper plates available to fit your structure.

As an example, a manifold configuration could include an access plate attached to the supply line and feed plate mounted where the pressurized substance is released. The stopper plate secures to the profile end to form a tight seal.



Did You Know?

80/20 carries a wide range of structural shapes that allow you to design a customized manifold.



80/20 manifold plates include all necessary hardware and O-rings or gaskets that you'll need to mount to the T-slot profile.

3-Hole Pressure Manifold Feed Plate

The 3-hole pressure manifold feed plate is commonly used when adding a pressurized substance to a T-slot profile. It has a tapped hole and mounts on the profile end to seal the connection where the pressurized substance is released. The suggested mounting hardware and gasket are included. The maximum allowable pressure is 150 psi (1034.21 kPa).

Pressure Manifold Tap Ready Access Plate

The pressure manifold tap ready access plate is commonly used when adding a pressurized substance to a T-slot profile. It has a tap-ready access point, mounts to the profile side, and includes an attached O-ring to form a tight seal. The maximum allowable pressure is 150 psi (1034.21 kPa). The suggested mounting hardware is included.

Gravity Roller

Part Description:

The gravity roller is typically used with Ready Tube® profiles or gravity roller mounting blocks (page 763) and T-slot profiles to build custom material handling and conveyor applications. The roller has spring-loaded pins that snap easily into the holes of a Ready Tube® profile. The roller is aluminum with plastic inserts, making it a strong and durable option. There are lengths available to accommodate frame openings from 15-27 inches (381-685.8mm) wide.

Part Description:

The gravity roller mounting block is made of fiberglass reinforced black nylon and is commonly used with gravity rollers (page 762) in material handling applications. The block secures in the T-slot (see suggested mounting hardware below) and the roller pin snaps in and out of the block.

Connector Rod / Connector Rod Profile

Part Description:

The connector rod is commonly used with Ready Tube® profiles in material handling or conveyor applications for connecting side rails on gravity roller sections. The connector rod comes in predetermined lengths or in a stock profile of 145" (3683mm). The stock profile can be cut to your desired length and tapped.

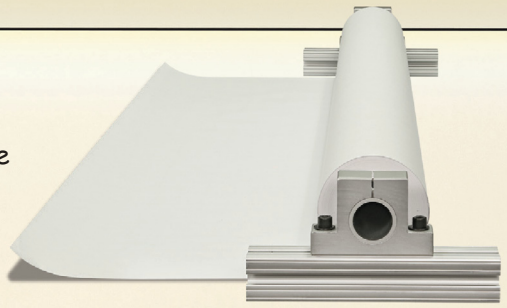
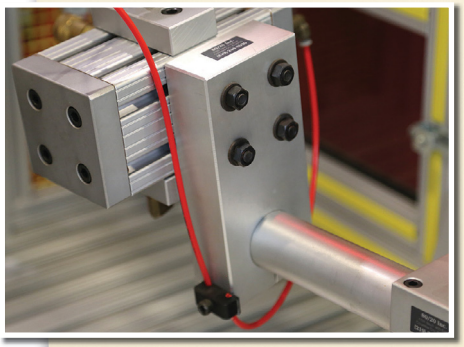
Introduction to Stanchions

Stanchions are typically used with 80/20 aluminum tubes to create an additional axis. Stanchions are a more permanent, precise, and stable base than alternatives, such as clamps.



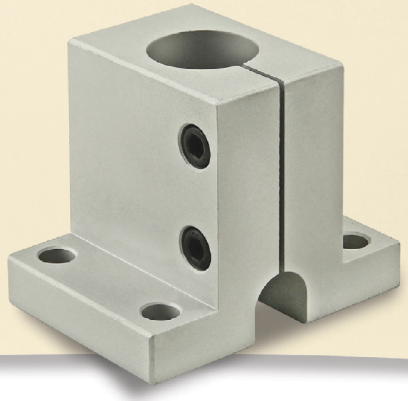


Variety of Bases

There are different bases to choose from that allow you to add vertical or horizontal axes or a combination of the two. You also have options that support two axes using just one base or even the ability to create an off-set axis.

Incorporate Tubes, Wires & Cables

You will also want to consider adding a handle to your stanchion block; they enable flexibility in positioning and easy repositioning if you will be moving the tube frequently.



Need to Know

If your project will incorporate tubes, wires or cables there are bases available with clearance holes to accommodate.

Single Shaft Stanchion Base

Part Description:

The single shaft stanchion base is commonly used with the aluminum tube profile (page 835) to create an additional axis. The tube connects parallel to the mounted base, and there is a clearance channel for running wires or cables. The base is aluminum, making it a strong and durable option. Clamp screws are included while the suggested hardware to mount the base to a T-slot can be found below.

Double Shaft Blank Stanchion Mounting Plate

Part Description:

The double shaft blank stanchion mounting plate is commonly used with the aluminum tube profile (page 835) to create custom double offset axes. Tubes connect perpendicular to the mounted base to form the stanchions. The plate is aluminum, making it a strong and durable option. Clamp screws are included.

Single Shaft Stanchion Mounting Block

Part Description:

The single shaft stanchion mounting block is commonly used with the aluminum tube profile (page 835), for connecting additional profiles or accessories. There are several pre-drilled holes to accommodate both positioning and a wide range of products. The block is aluminum, making it strong and durable. Stanchion clamp screws are included.

Horizontal Stanchion Quick Clamp

Part Description:

The horizontal stanchion quick clamp is commonly used with the aluminum tube profile (page 835) to create an additional axis. The tube extends parallel from both sides of the mounted base. The clamp includes a black nylon racheting handle (page 782) that enables easy positioning and repositioning.

Part Description:

The quick stanchion cross clamp is commonly used with the aluminum tube profile (page 835) to create two custom axes that are perpendicular to each other. It includes two black nylon racheting handles (page 782) that enable easy positioning and repositioning. The stanchion cross clamp is aluminum, making it a strong and durable option.

Finishing Touches

80/20 accessories pull together your project and give it the finishing touches to make it fit your exact specifications. There are a wide variety of options; from storage and organization to wire and tube management, you'll find what you need to enhance and personalize your project.

When adding accessories, it's helpful to consider a few overall categories:

- Protection
- Wire & Cable Management
- Storage and Organization

Keep in Mind

Some products can be used in multiple categories. For instance, T-slot covers provide protection from debris buildup and can also be used to manage wires and cables recessed within the T-slot.

Protection

Accessories in this category are used for a range of purposes from protecting people and equipment from sharp edges and damage to keeping dust out of T- slots. Some of the products, such as T-slot covers and end caps, also add a finishing look to your project.

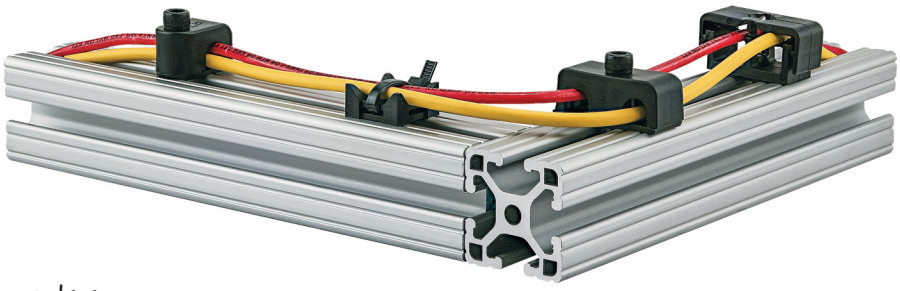
- End caps
- T-slot covers
- Tread strip
- Anodize breaker
- Grounding terminal
- Rubber bumper

Tip: Try aluminum T-slot covers to blend in with your profile or use colors to stand out and denote caution or warning.

Wire and Cable Management

Wire and cable management products improve safety by keeping your application clean, protected and organized. These products decrease the possibility of damage to wires, cables and tubes and can be quickly and easily installed into any project. The variety of options available provides flexibility in design and implementation.

- Wiring duct
- Wire housing & covers
- Cable tie mounting pad
- Cable and tube clip
- Cable tie mounting block
- Single and double tube clamps

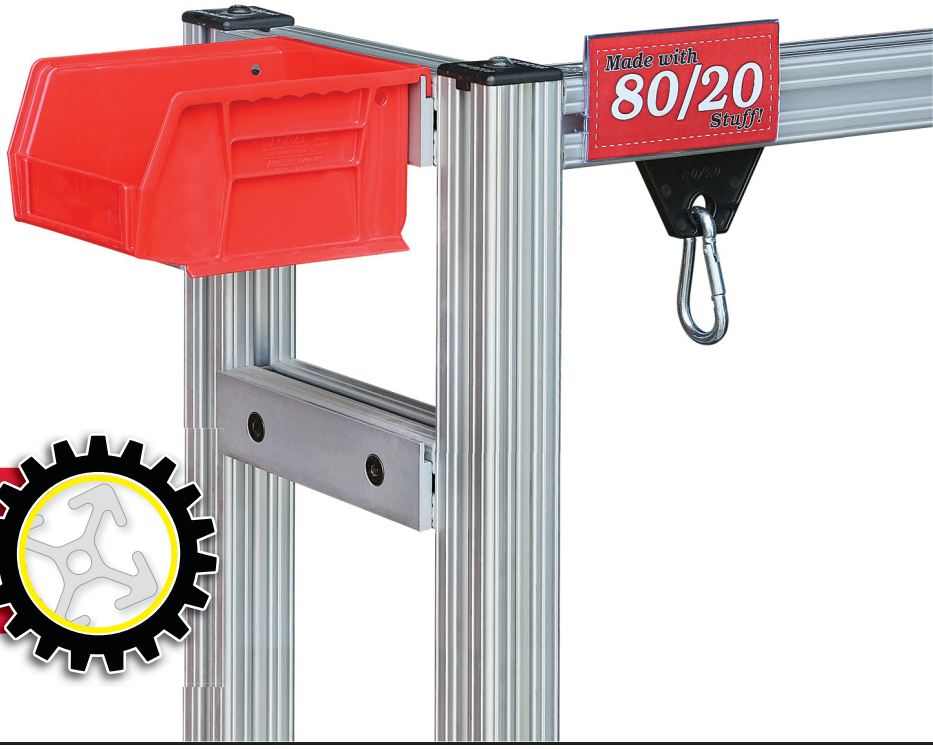


Tip: Wiring duct has interlocking ends so you can make the duct any customized length.

Storage and Organization

Storage and organization accessories come in a range of colors and sizes to accommodate your processes. Keep clutter at bay and streamline operations by incorporating these products into your application.

- Storage bins
- Slide-in tool hanger
- Mounting hooks
- Tool hanger spring hook
- Light-duty adhesive clamp
- Tool & Cup Holders
- Label holder



Important Note: Storage bins are mounted to a T-slot profile using storage bin hangers (see page 813).

That's Not All

Be sure to browse through all of the products to find everything you need to finish your project.

Part Description:

The end cap with push-in fastener adds a finishing touch to your project and closes off profile ends to limit dust and debris buildup. It can be installed with a push-in fastener, self-tapping screw (page 788) or into a tapped hole using a button head socket cap screw. Choose from black, red, blue, yellow or gray to color-coordinate with your application. The black end cap is available with or without the 80/20 logo, while the colored caps include the logo.

Screw-On End Cap

Part Description:

The screw-on end cap uses a flat head socket cap screw that spreads the pin to secure the end cap and does not require a profile end tap. It adds a finishing touch to your project and closes off profile ends to limit dust and debris buildup. The suggested hardware can be found below.

Standard T-Slot Cover

Part Description:

The standard T-slot cover is more rigid for heavy use applications. It adds a finishing touch and polished look to an application. It prevents dust and debris build up and covers wires and tubes in the T-slot channel. There are options available in black, gray, or safety yellow. **Tip:** Use a soft faced mallet (page 914) to tap the cover into the T-slot.

Reduction T-Slot Cover

Part Description:

The reduction T-slot cover slopes inward to create a flat surface and adds a finishing look while preventing dust and debris build up. It covers wires and tubes in the T-slot channel. It can also be used as panel gasket.
Tip: Use a soft faced mallet (page 914) to tap the cover into the T-slot.

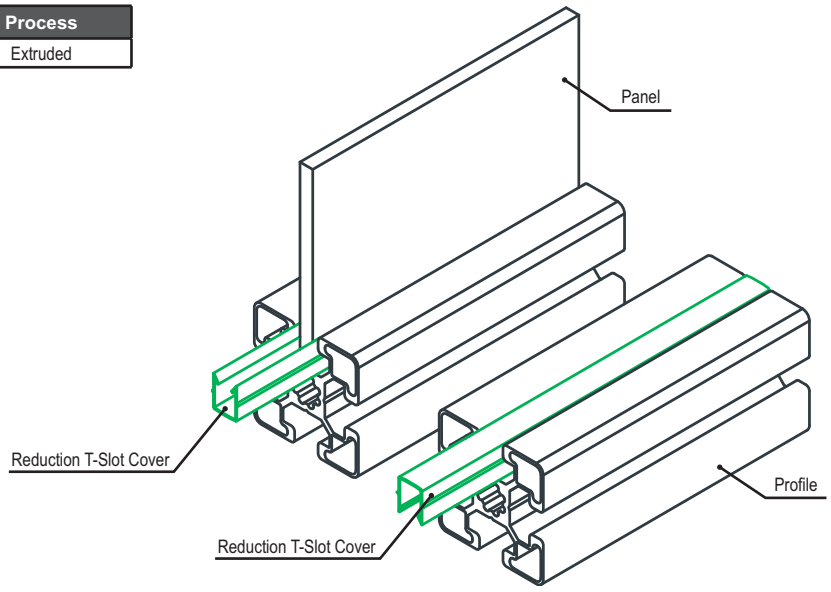
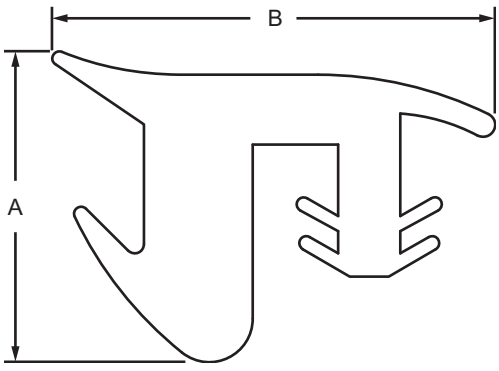
Material Specifications

Material	Finish	Process
Polypropylene	Matte	Extruded



Part Description:

The rubber T-slot cover prevents dust and debris buildup, covers wires in the T-slot channel, and adds an extra layer of protection to applications. It rolls into the T-slot, making it easy to assemble.



Part No.	Series	Material	Color	A	B	Length	Weight

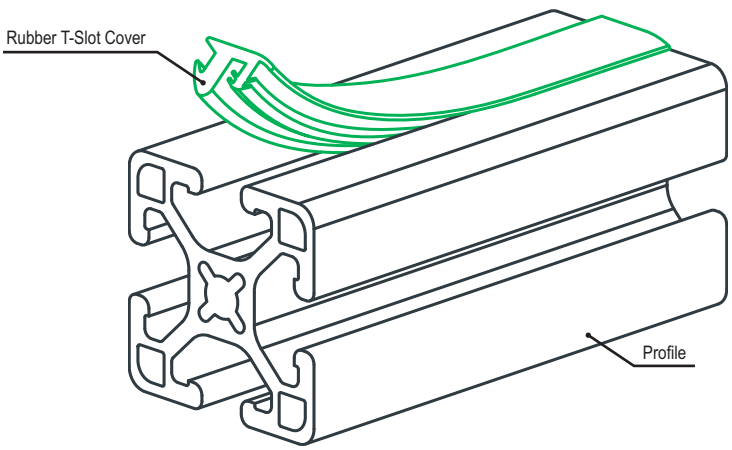
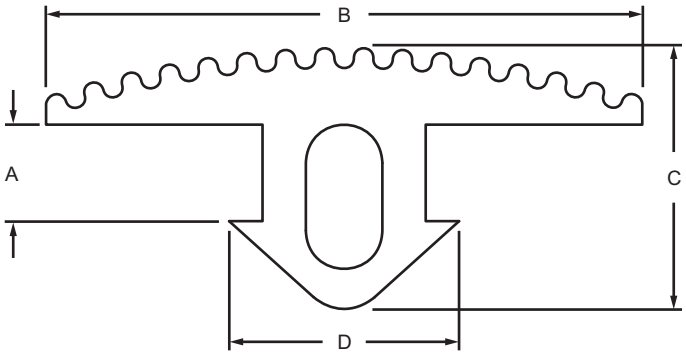
40-2877	40			10.16mm	14.48mm	per 45.7 meter roll	2.8654 kg



Tread Strip

Part Description:

The tread strip fits into a T-slot channel and provides an anti-slip ribbed surface. It has a key pad that presses into a T-slot and is commonly used for adding traction on steps or as padding for doors. Tread strip is sold by the foot or meter.



Part No.	Series	Material	Color	A	B	C	D	Max Length	Weight

Part Description:

The wire housing is commonly used to organize wires, cables, and tubes. It can be integrated into new or existing applications. The housing makes it easy to place and remove wires simply by removing the wire housing cover (see page 800). It has breakaway fingers that snap off to accommodate large wire groupings. The wire housing is available in gray or black.

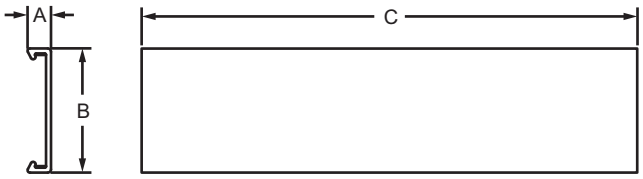
Wire Housing Cover

Part Description:

The wire housing cover is commonly used with the wire housing (see page 799) for wire and cable storage and organization. It keeps dirt and debris out while retaining wires in the housing. The wire housing cover is available in gray or black.



Part No.	Series	Material	Color	A	B	C	Weight

Part Description:

Wiring duct is commonly used to organize wires, cables, and tubes. It is reusable and easy to integrate into new or existing applications. The strips include overlapping fingers with no sharp edges that interlock for end-to-end attachment to enable easy access to wires with no need for a separate cover.

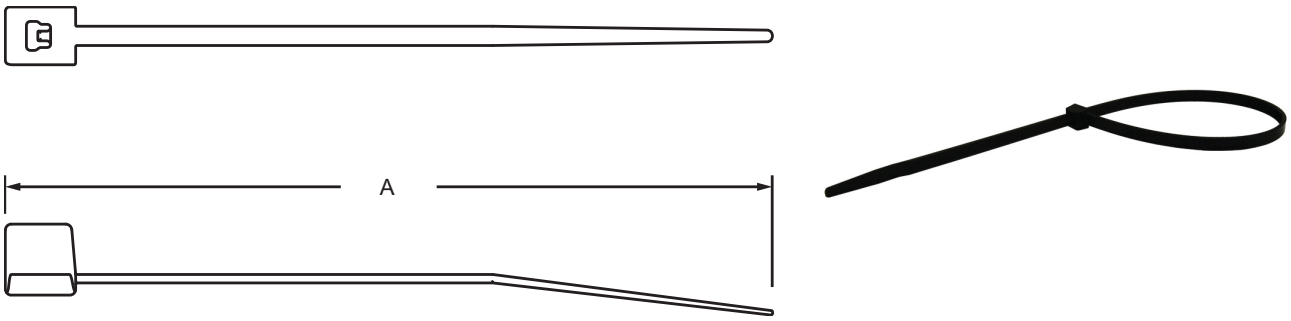
Cable Tie

Part Description:

The cable tie is used to organize wires, cables, and tubes. It has a high tensile strength. Cable ties are sold in packages of 100.



Part No.	Series	Material	Finish	Process	Color	A	Weight

Drop-In Cable & Tube Clip

Part Description:

The drop-in cable and tube clip is used to organize cables, wires, and tubes without the need for cable ties. It is a reusable option that has a snap cover which adds an extra layer of protection and can be opened and closed repeatedly. The pad key allows it to easily drop into a T-slot channel even when ends are closed off. The drop-in cable and tube clip twists into the T-slot to lock in place.

Cable Tie Mounting Block

Part Description:

The cable tie mounting block is used to organize cables, wires, and tubes. It is a reusable option that allows cable ties to be attached in two directions. The pad key allows it to easily drop into a T-slot channel even when ends are closed off. The cable tie mounting block twists into the T-slot to lock in place.

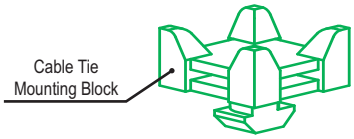
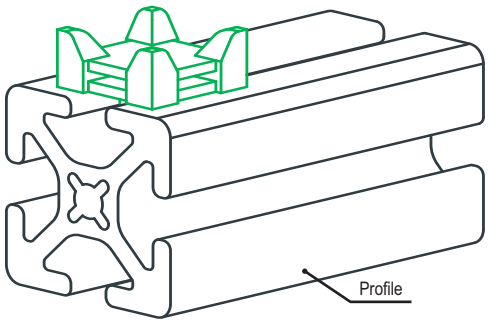
Material Specifications

Material	Grade	Finish	Process	Color
Nylon	PA6 GF30	Matte	Molded	Black





Part Description:

The single cable and tube clamp has one clamp channel to organize a tube, wire, or cable and attaches easily to a T-slot profile. It is made of black polypropylene which is durable, long-lasting, and resists oil, chemicals, and acids, making it ideal in industrial settings. The stackable design provides a space-saving method to organize multiple wires.

Part Description:

The Wiremold® power strip is ideal for applications that require power to many devices and is commonly used in laboratory and factory environments, offices, rack-mount applications, workbenches, and industrial solutions. It is housed in a durable, mountable encasement that allows for both vertical and horizontal installation. There are options available with 15 or 20-amps as well as a selection with a built-in circuit breaker that prevents dangerous overloads. The mounting clips and hardware to mount to a T-slot profile are included and there is no machining required.

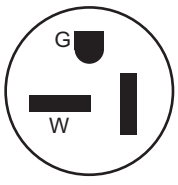
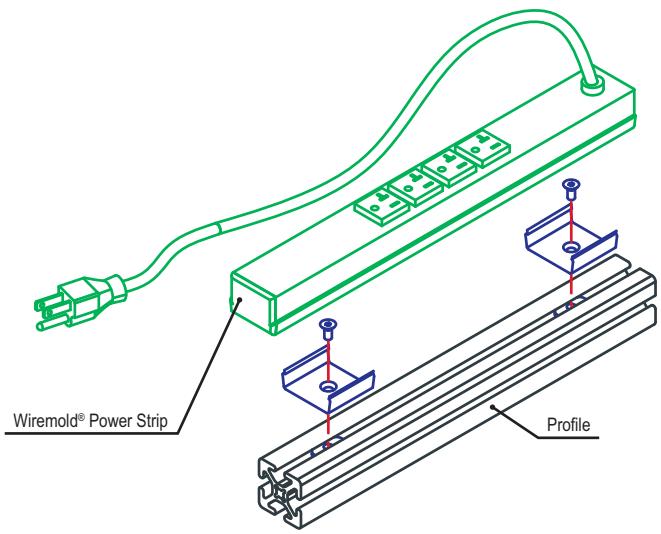
15 Amp Straight Blade



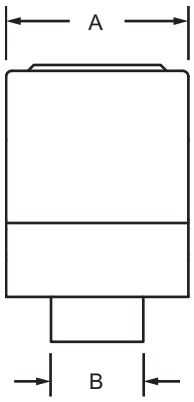
20 Amp Straight Blade

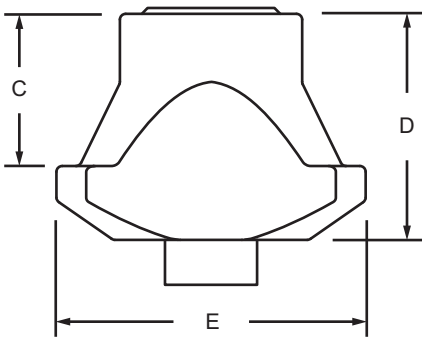


Anodize Breaker

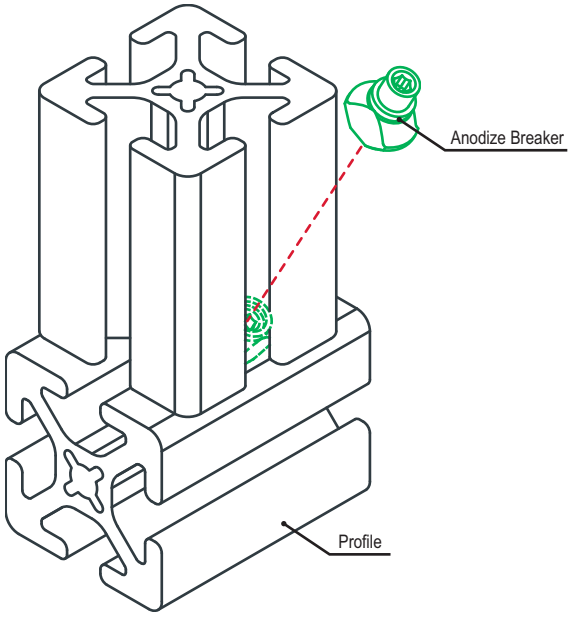
Part Description:

The anodize breaker is made of zinc-plated steel which penetrates anodize to provide a grounded application. It twists into a T-slot then tilts at a 45 degree angle. The set screw connects to the seam of the mating profile. The anodize breaker is available for 15 and 40 series profiles. **Additional Information:** This requires a 3.00mm ball end wrench; see the Tool section beginning on page 907 for options.





Part No.	Series	Material	Grade	Finish	A	B	C	D	E	Weight
12328	15 40	Steel	C35	Bright Zinc	.311"	.157"	.260"	.386"	.528"	.009 lb



Part Description:

The grounding terminal is made of zinc-plated steel and creates a conductive electrical connection to T-slotted profiles. It is frequently used in applications such as electronics assembly where electrostatic charges must be avoided. All hardware is included. **Additional Information:** The thread rod is an M6 thread and can be adjusted using a 3.00mm ball end wrench. See the Tool section beginning on page 907 for options.

Storage Bin

Part Description:

The storage bin is made of polypropylene plastic that is durable yet lightweight, perfect for customized storage systems. There are options available in red, blue, or yellow to assist with organization and there are six sizes to choose from. Bins hang from an aluminum container hanger that mounts to the T-slot profile. The storage bin hanger is sold separately (page 813).

Heavy-Duty Monitor Mount

Part Description:

The heavy duty monitor mount aids ergonomic initiatives and keeps the monitor off the work surface. It is compatible with the Video Electronics Standards Association (VESA) mounting patterns of 100x100, 200x100, or 200x200, which includes most 23" to 42" displays. The mount supports adjustments in three dimensions; it can rotate 360 degrees, tilt ranging from 15 degrees upward to 15 degrees downward, and swivel ± 90 degrees. Additionally, it can be extended from the mounting surface a minimum distance of 3.82 inches (97mm) to a maximum of 16.65 inches (423mm). The mount can safely hold up to 44 pounds (20 kg).

Part Description:

The adjustable monitor mount aids ergonomic initiatives and keeps the monitor off of the work surface. It is compatible with the Video Electronics Standards Association (VESA) mounting patterns of 75x75 and 100x100, which includes most 10 to 24-inch displays. The mount supports adjustments in four dimensions; it can be swiveled ± 90 degrees, tilted ranging from 45 degrees upward to 45 degrees downward, and rotated 90 degrees. Additionally, it can be extended from the mounting surface a minimum distance of 3.1 inches (78.74mm) to a maximum of 11.0 inches (279.4mm). The mount can safely hold up to 30 pounds (13.61kg), including the weight of the mount itself.

Slide-In Tool Hanger

Part Description:

The slide-in tool hanger is made of high-strength black nylon and is ideal for hanging air tools, cable reels, and heavy door panels. It slides into a T-slot end and moves easily within the channel with no lubrication necessary. There is a hole in the hanger for a spring hook (page 817). The tool hanger has a 100 pound (68 kg.) capacity.

Tabletop Mounting Tape

Part Description:

The tabletop mounting tape is a high-strength bonding method that is easy to use and provides long-term durability. The 3M™ VHB™ double-sided tape adheres to a wide variety of materials and is commonly used to mount a tabletop work surface horizontally, as it eliminates the need for machining. The pressure-sensitive adhesive bonds on contact. **Additional Information:** Please note this product is sold in packs of 10 pieces.

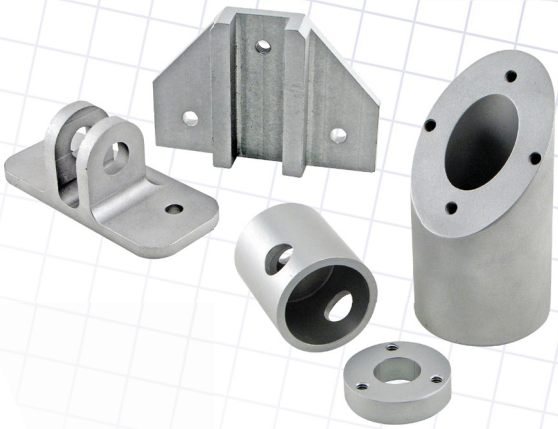
Structural Shapes for Custom Solutions

Structural shapes are commonly used for custom projects; if there's a unique flat plate, manifold, bearing, or bracket you need, we have the material in stock to make it for you.

From solid aluminum plates, deadbolt latches, angle profiles, or panel mount blocks, this wide selection of in-house shapes provides a quick turn time for your design.



In-House Machining Capabilities

80/20 also provides an in-house Custom Machining service to modify any of our structural shapes to fit your requirements. This gives you access to a high-precision, large capacity machine shop to customize your parts quickly and accurately.

For More Info

Talk to a design technician today at 260-248-8030 to see how we can help create your custom part.

Selection of Finishes

All of the structural shapes are available with either a mill or anodize finish. We also offer black anodize to create an aesthetic look.

Mill Finish

Clear Anodize

Black Anodize

Part Description:

The flat stock profile can be cut to your desired length. It is perfect for unique custom parts such as flat plates, manifolds, and floor mounts. There are options available in a mill or anodize finish. See page 860 for the cut-to-length machining service.

Square/Rectangular Tube Profile

Part Description:

The square and rectangular tube profiles can be cut to your desired length. It is perfect for medium-duty projects that need an open center cavity or that don't require a T-slot channel. There are options available in a mill or anodize finish. See page 860 for the cut-to-length machining service.

Part Description:

The inside corner connector profile can be cut to your desired length. There are options available in a mill or anodize finish. It is typically used to create an inside corner connector which is a strong method for forming a 90 degree connection between profiles. See page 860 for the cut-to-length machining service.

45 Degree Gusset Profile

Part Description:

The 45 degree gusset profile can be cut to your desired length. There are options available in a mill or anodize finish. It is commonly used for custom 90 degree connections as well as floor mounts and supports. See page 860 for the cut-to-length machining service.

Panel Mount Block Profile

Part Description:

The panel mount block profile can be cut to your desired length. There are options available in a mill or anodize finish. It is commonly used to mount a panel flush with a profile edge or on the profile surface. There is a slot tab on the block that acts to align the mount in the T-slot. When used in this capacity, the panel mount block increases stability of the mounted panel while also reducing vibration. See page 860 for the cut-to-length machining service.

Single Retainer Profile

Part Description:

The single retainer profile can be cut to your desired length. There are options available in mill or anodize finish. It is commonly used to mount a panel or mesh when it is recessed within the T-slot or on the profile frame. When used in this capacity it is a strong fastening option that is simple to use, provides stability, and reduces vibration. The single retainer profile is also frequently used when mounting one panel or mesh to a T-slot profile or in instances when larger profile series are used to mount two panels or mesh. See page 860 for the cut-to-length machining service.

Part Description:

The double retainer profile can be cut to your desired length. There are options available in mill or anodize finish. It is commonly used to mount a panel or mesh when it is recessed within the T-slot or on the profile frame. When used in this capacity it is a strong fastening option that is simple to use, provides stability, and reduces vibration. The double retainer profile is also frequently used to create a custom retainer in instances when a T-slot profile is connecting two adjacent panels. See page 860 for the cut-to-length machining service.

Storage Bin Hanger Profile

Part Description:

The storage bin hanger profile is typically used to mount storage bins (page 813) to an application. It is made of aluminum and available in mill or anodize finish. The storage bin profile can be cut to your desired length. See page 860 for the cut-to-length machining service.

Part Description:

The panel stiffener profile can be cut to your desired length. It is made of aluminum, meaning it is strong, lightweight and corrosion-resistant. It is available with or without a handle and is commonly used to add rigidity to large .250" (6.35mm) thick panels. It easily connects to a panel using only a soft-faced mallet. See page 860 for the cut-to-length machining service.

65-7224	M	Cut to Length Shapes with **ANY** Profile Side ≥ 82mm		

Part Description:

The tap profile end machining service is used to add threads to the extruded holes in a T-slot profile. This enables the insertion of a bolt to mount an end fastener or accessories. There are a wide variety of sizes and depths available. **Additional Information:** When ordering this service, designate which profile end (left, right, or both) requires the tap.

Part Description:

The access hole machining service provides clearance to the hex head of an end fastener screw, enabling the screw to be tightened. There are options available for an open (or custom) hole at any distance from the left end of the profile or drilled to predetermined locations for mounting specific profiles. **Additional Information:** When ordering open access holes, specify T-slot location from left end of profile and designate which T-slot to apply the service.

Open Style Access Hole

Part No.	Series	Service Type	Hole Diameter
7051	10	Access Hole for 10 Series Profiles	.219"
7050	15	Access Hole for 15 Series Profiles	.295"
20-7069	20	Access Hole for 20 Series Profiles	4.60mm
25-7051	25	Access Hole for 25 Series Profiles	5.50mm
30-7246	30	Access Hole for 30 Series Profiles	8.30mm
40-7050	40	Access Hole for 40 Series Profiles	7.50mm
45-7248	45	Access Hole for 45 Series Profiles	10.05mm
7246	RT	Access Hole for Ready Tube Series Profiles	.328"

Ordering Example: (2) 1530 x 35.75 w/ #7050 in slot T at .750" and in slot U at .750" from Left End

Anchor Fastener Counterbore / Butt Fastener Counterbore

Part Description:

The anchor fastener and butt fastener counterbore services allow an anchor fastener or butt fastener face to be flush with the profile surface. It is required when using either of these fasteners for a profile connection. See pages 213-216 for information on anchor fasteners and page 217 for butt fasteners. **Additional Information:** When ordering this service, designate which profile end (left, right, or both) requires the counterbore.

Profile Miter Cut

Part Description:

The profile miter cut is used to create custom-angled supports. T-slotted profiles can be miter cut to angles of 15 to 90 degrees or 30 to 90 degrees for select profiles (with the exception of 3060 and 40-8016, which can only be cut to an angle of 45 degrees across the 6.00" (160mm) side. Select structural shapes may also be mitered. See the miter cut worksheet on page 869 for guidelines. **Additional Information:** When ordering this service, designate which profile end (left, right, or both) requires the miter. A drawing is required with this machining service; for project design assistance contact a Design Technician at www.8020.net.

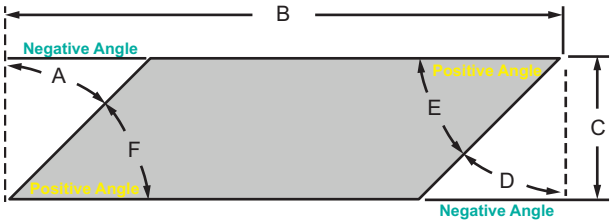
Profile Miter Cut Worksheet

All T-slotted profiles may have miter cuts from 0° to 75°, EXCEPT for 3060 which can only be cut along the long side at 0° to 45° and 40-8016 which can only be cut along the long side at 0° to 45°. Example shown below:



Example:
The following fields are required to complete a custom profile miter cut.

A = -30° **B** = 43.18" or 450mm **C** = 3.00" or 80mm
D = -45° **E** = 45° **F** = 60°

AutoQuoterX® II always indicates material removed from the profile. (See dimension reference A and D)

Note: Structural shape maximum angle is dependent on profile size

T-Slotted Profile Dimensions Sheet

Be sure to complete all required fields below for a profile miter cut.

Miter Cut Counterbore

Part Description:

The miter cut counterbore machining service includes both a drill through and counterbore to create custom supports with angles ranging from 30 to 60 degrees. This service is for one end of the profile and includes mounting hardware. Each end receives a counterbore on the mitered face T-slot(s). **Additional Information:** When ordering this service, designate which profile end (left, right, or both) requires the counterbore.

Profile Miter Cut with Counterbore

Part Description:

The profile miter cut with counterbore is used to create 45 degree supports without the use of external flat plates. This service is comprised of the cut and counterbore on both ends and includes mounting hardware. The profile miter cut with counterbore can be used for custom lengths up to 72” (1828.8mm) long. Each end receives a counterbore on the mitered face T-slot(s).

Clearance Drill Thru in T-Slot

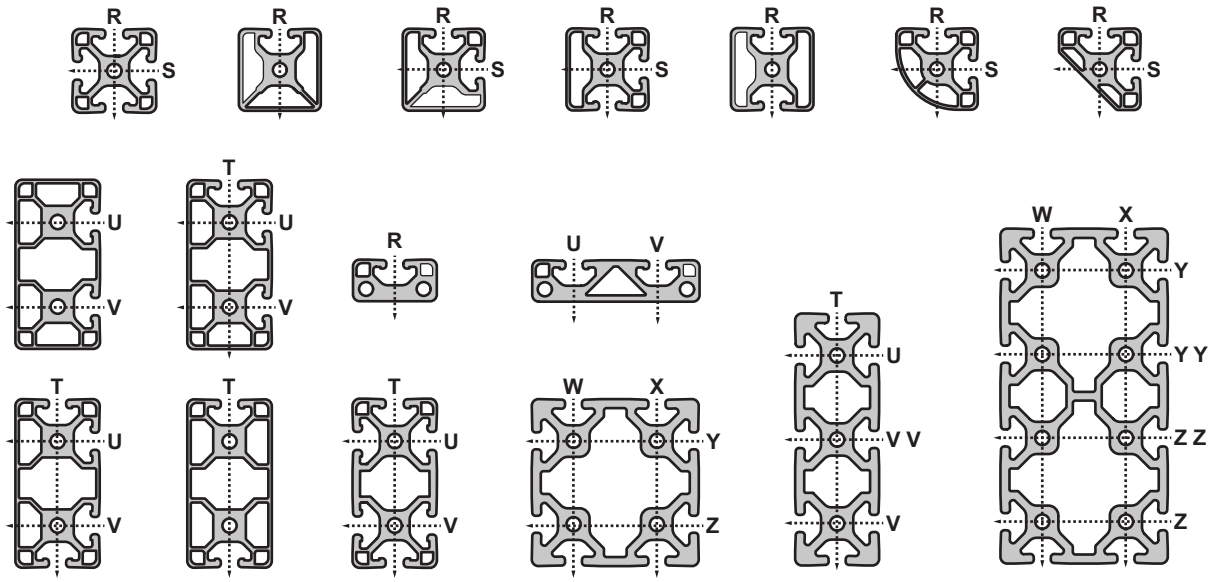
Part Description:

The clearance drill thru in T-slot is typically used for additional clearance while adding stem casters or leveling feet to a profile. It is a drill through the profile T-slot, as designated in the charts below. **Additional Information:** When ordering this service, designate T-slot position from left end of profile.

Part No.	Series	Service Type	Hole Diameter
7244	10 15	Drill Thru Hole in T-Slot	.257"
7246	10 15		.328"
7248	10 15		.438"
7240	15		.563"
65-7244	25 30 40 45		6.53mm
65-7246	25 30 40 45		8.33mm
65-7248	25 30 40 45		11.13mm
65-7240	30 40 45		14.30mm

Ordering Example: (2) 1530 x 24.00" w/ #7248 in T @ 1.50" and 22.50" from Left End

Clearance Drill Thru in T-Slot Designations



Clearance Drill Thru Between T-Slots

Part Description:

The clearance drill thru between T-slots is typically used for additional clearance while adding stem casters or leveling feet to a profile. It is a drill through the profile wall, as designated in the charts below. **Additional Information:** When ordering this service, designate T-slot position from left end of profile.

Part No.	Series	Service Type	Hole Diameter
7241	10 15	Drill Thru Hole in T-Slot	.257"
7243	10 15		.328"
7245	10 15		.438"
7247	15		.563"

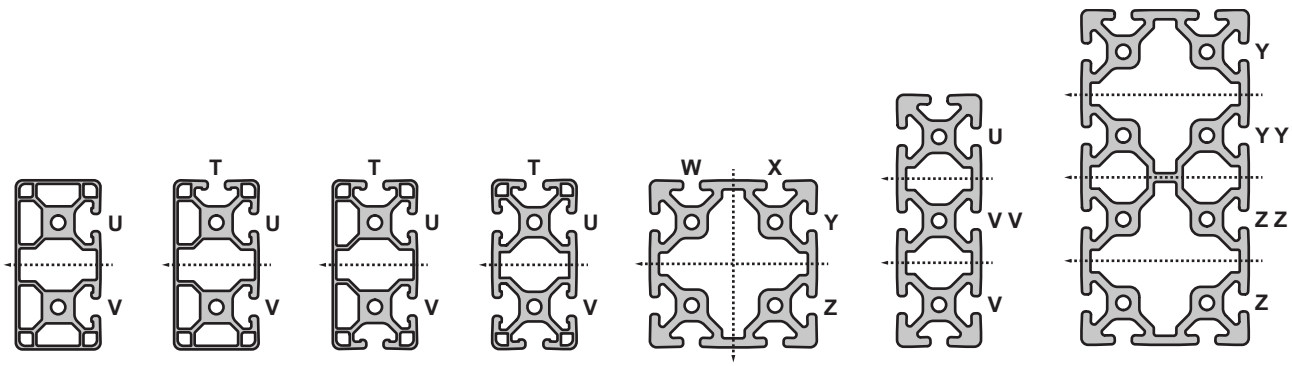
65-7243	25 30 40 45		8.33mm
65-7245	25 30 40 45		11.13mm
65-7247	30 40 45		14.30mm

Ordering Example: (2) 1530 x 24.00" w/ #7247 between U and V @ 1.50" from Left End

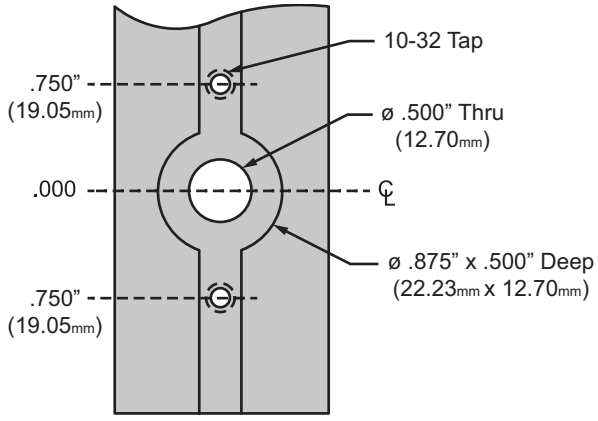
Clearance Drill Thru Between T-Slot Designations



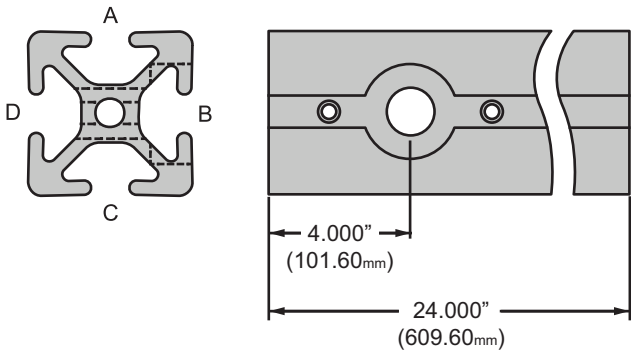
Deluxe Door Handle Profile Milling

Part Description:

The deluxe door handle profile milling service is used to add a deluxe door handle to a T-slot profile. See page 567 for information on deluxe door handles. **Additional Information:** When ordering this service, designate distance from the end of the profile to the centerline (CL).



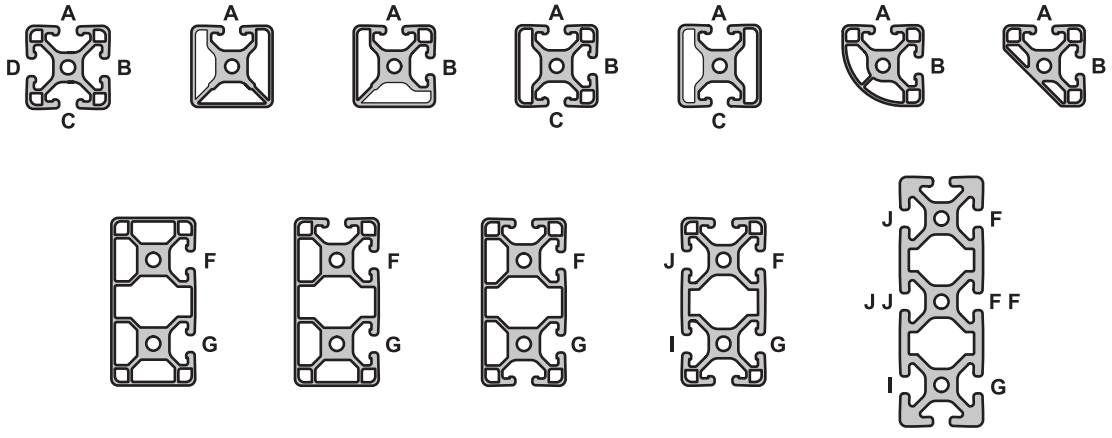
Positioning Example



Part No.	Series	Service Type	Bore Size (Depth)
7305	15	Drill Thru Hole for Deluxe Door Handle	ø .875" x (.500")
65-7305	40		ø 22.23mm x (12.70mm)

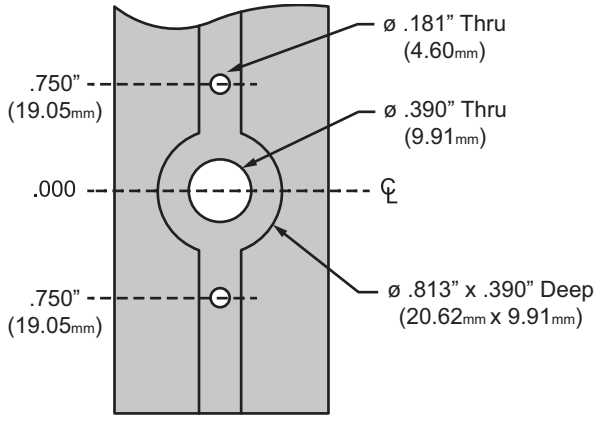
Ordering Example: (1) 1515 x 24.00" w/ #7305 in B @ 4.00" from left end.

Deluxe Door Handle Machining Designations

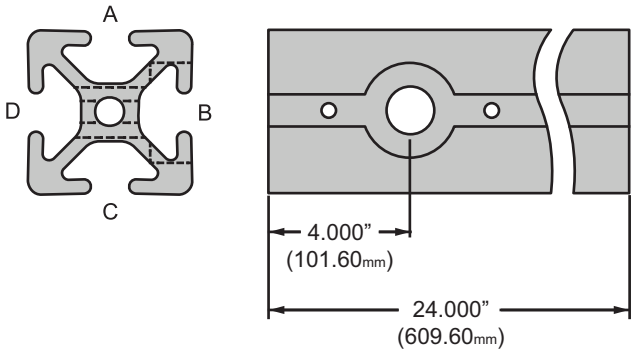


Part Description:

The furniture style handle profile milling service is used to add a furniture style door handle to a T-slot profile. See pages 569-570 for information on furniture style handles. **Additional Information:** When ordering this service, designate distance from the end of the profile to the centerline (CL).



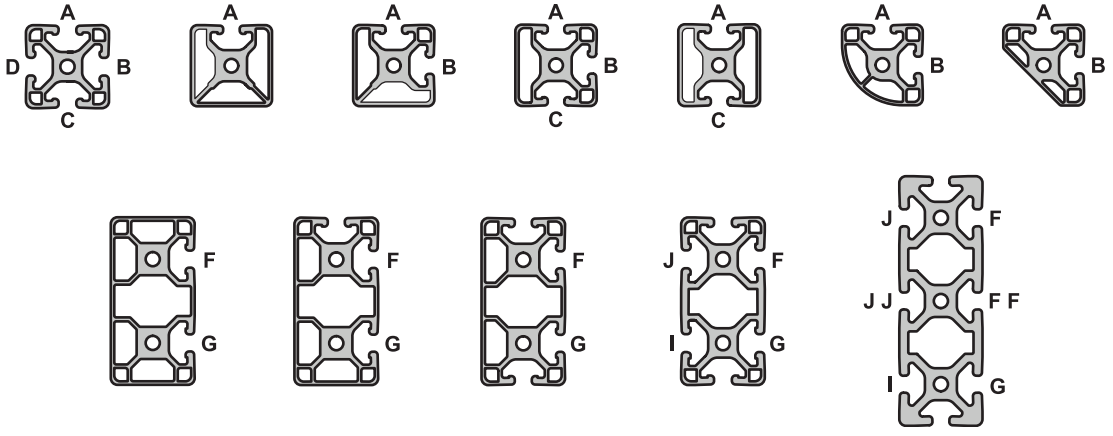
Positioning Example



Part No.	Series	Service Type	Bore Size (Depth)
7315	10 15	Drill Thru Hole for Furniture Style Handle	ø .812" x (.390")
65-7315	25 40		ø 20.62mm x (9.91mm)

Ordering Example: (1) 1515 x 24.00" w/ #7315 in B @ 4.00" from left end.

Furniture Style Handle Machining Designations



Miter Connector Profile Milling

Part Description:

The miter connector profile milling service allows a miter connector face to be flush with the profile surface and is required when using this connector for a profile connection. See page 222 for information on the miter connector.

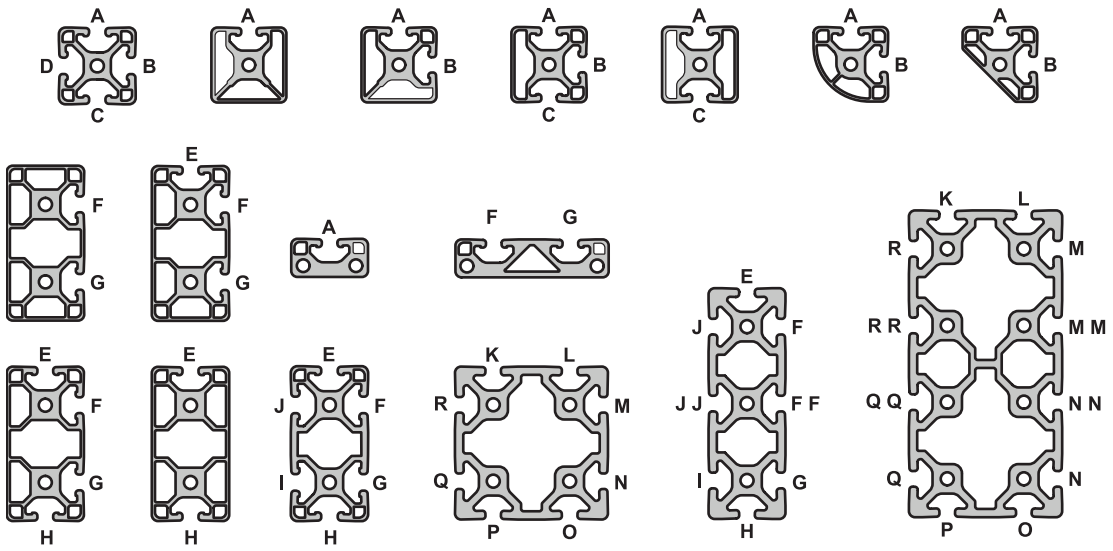
Ordering Example: (2) 1010 x 18.000 w/ #7098 in A @ 3.00 and 15.00 from Left End

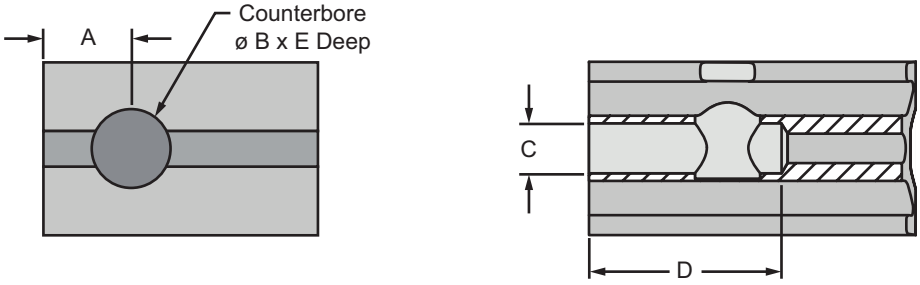
Economy T-Nut Clearance Designations



Central Connector Profile Milling

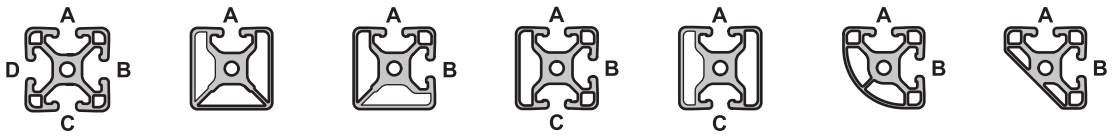
Part Description:

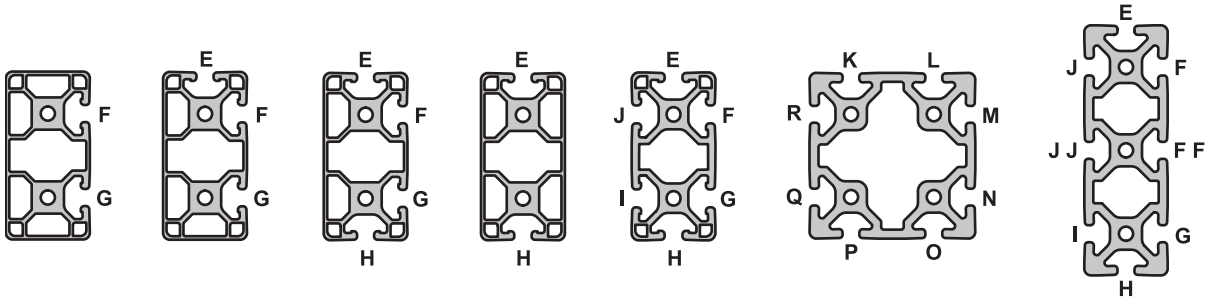
The central connector profile milling service consists of both a drill through the profile end and a T-slot counterbore. This machining service enables the use of a central connector (page 224 for information on central connectors). **Additional Information:** When ordering this milling service, designate profile end (left, right or both) and T-slot for the counterbore.



Part No.	Series	Service Type	A	B	C	D	E
7058	15	15 Series Profile Milling for Central Connector	1.260"	.597"	.469"	1.750"	1.025"
30-7058	30	30 Series Profile Milling for Central Connector	17.50mm	11.11mm	8.03mm	30.50mm	21.34mm
40-7058	40	40 Series Profile Milling for Central Connector	32.00mm	15.16mm	11.91mm	44.45mm	26.97mm
45-7058	45	45 Series Profile Milling for Central Connector	22.50mm	17.12mm	—	—	32.64mm

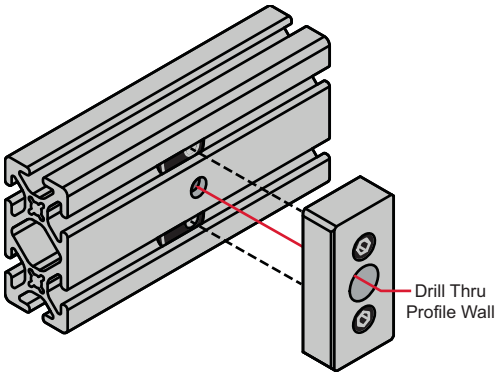
Central Connector Machining Designations

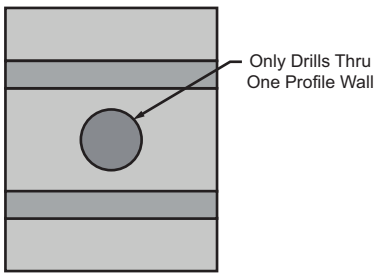




Part Description:

The manifold access profile milling service consists of a drill through one wall of a T-slot profile to provide access to the center cavity for use with pressure manifolds. See the manifolds section beginning on page 752 for information on pressure manifolds. **Additional Information:** When ordering, designate distance from the left end of the profile. Reference the hole location by specifying "between" T-slot designations. See below for T-slot designations.

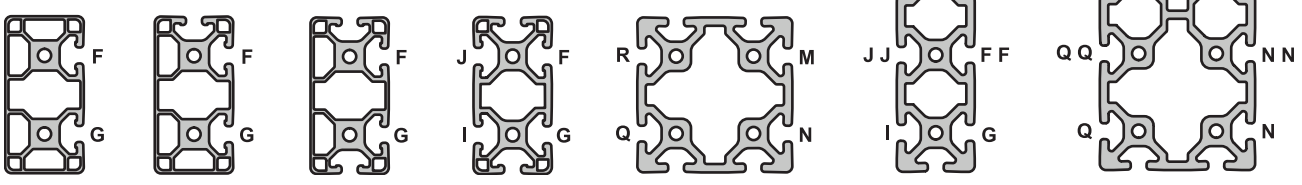




Part No.	Series	Service Type	Hole Diameter
7062	10	Drill Thru One Profile Wall	.327"
7068	15		.374"
25-7062	25		8.30mm
40-7068	40		9.50mm

Ordering Example: 1530: (1) @48.25" w/ #7068 btwn F and G @ 12.00" and 36.25" from left end.

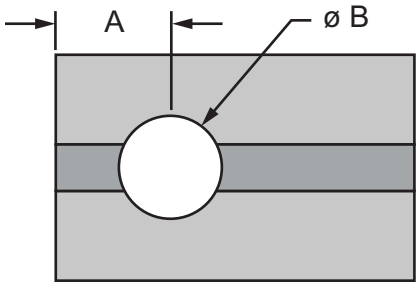
Manifold Access Drill Thru Designations



Bolt Connector Profile Milling

Part Description:

The bolt connector profile milling service provides clearance for use of a bolt connector with T-slot profiles. See page 225 for information on bolt connectors. **Additional Information:** When ordering this milling service, designate profile end (left, right, or both) and T-slot for the clearance hole.



Part No.	Series	Service Type	Bolt Connector	A	B
30-7034	30	30 Series Profile Milling for Bolt Connector (30.00mm only)	13189	16.50mm	8.30mm
45-7034	45	45 Series Profile Milling for Bolt Connector (45.00mm)	13190	23.70mm	17.15mm
45-7037	45	45 Series Profile Milling for Bolt Connector (90.00mm)	13192	23.70mm	17.15mm

Ordering Example: (2) 45-4590 x 908.0mm w/45-7037 in slot R both ends.

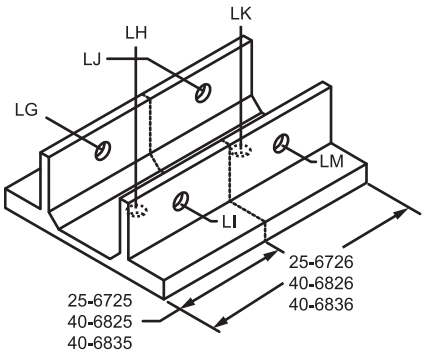
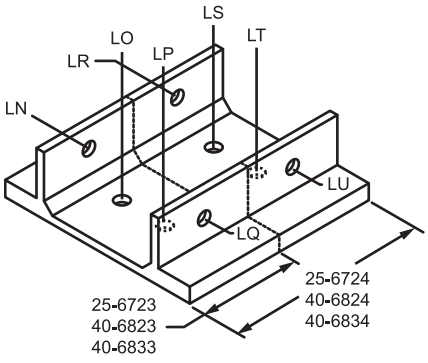
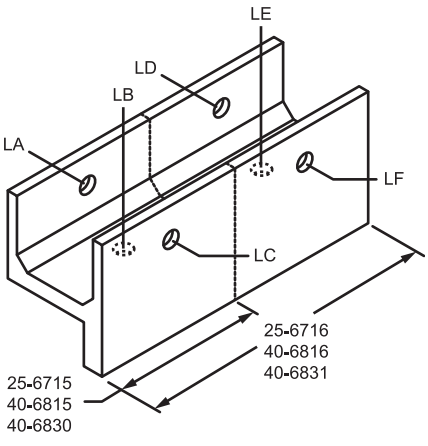
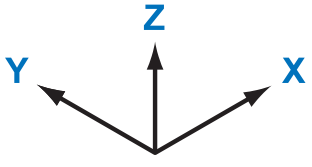
Refer to page 881 for fractional brake holes for linear bearings



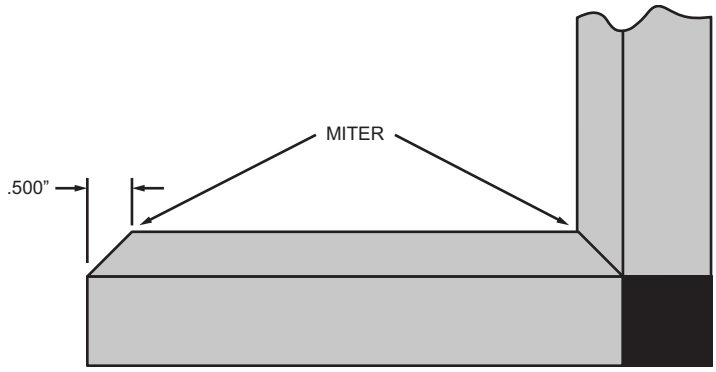






45 Degree Flange Milling

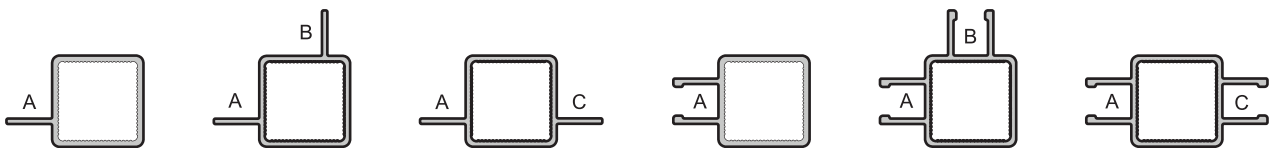
The 45 degree flange milling service allows two Quick Frame profile flanges to intersect at 90 degrees without interference. **Additional Information:** This service is for two ends. If one end is desired specify left or right end.



Part No.	Series	Service Type
7300	QF	45 Degree Flange Milling Service for Quick Frame Location A, B or C only
7301	QF	45 Degree Flange Milling Service for Quick Frame Location A and B
7302	QF	45 Degree Flange Milling Service for Quick Frame Location A and C

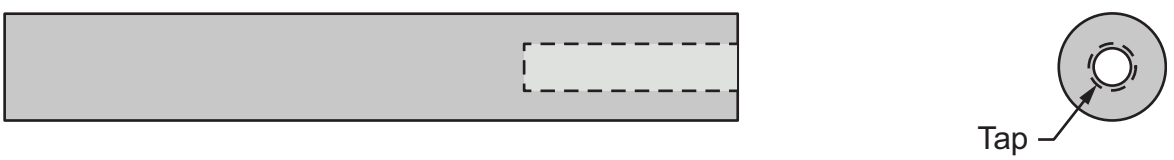
Ordering Example: (2) #9010 x 22.00” w/ #7300 on A per drawing.

45 Degree Flange Machining Designations



Connector Rod End Tap

The connector rod end tap machining service is used to add threads to the end of a connector rod. This enables the insertion of a bolt to mount accessories. **Additional Information:** When ordering this end tap, designate which end (left, right or both) requires the tap. See page 764 for more information on connector rods.

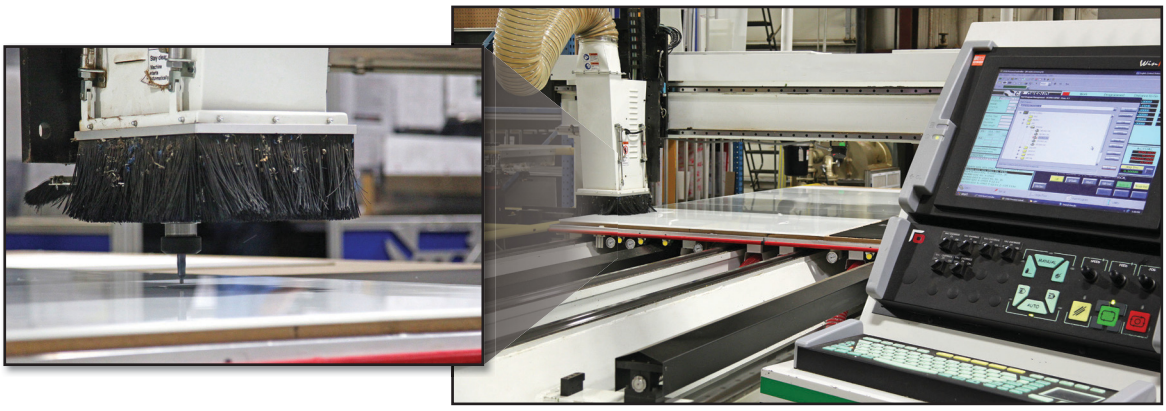


Part No.	Series	Tap Size (Min. Depth)	Taps Per End	Profile Part No.
7105	F RT	5/16-18 (1.25”)	1	9820
7106	F RT	M8 x 1.25” (31.75mm)		

Cut Plastic Panel to Size / Aluminum Plate to Size / Shear Wire Mesh to Size

Part Description:

The cut panel to size machining service is used to create custom plastic, mesh, or aluminum plates and panels. It has a tolerance of plus or minus .060" (1.52mm) and there are options available to accommodate different thicknesses and required lengths.



Cut Plastic Panel or Aluminum Plate to Size

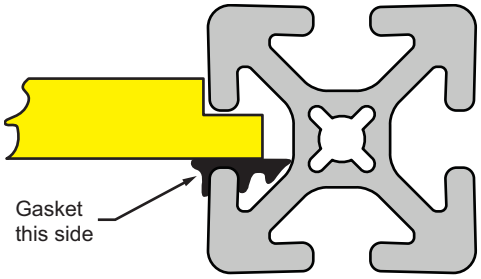
Panel Part No.	Aluminum Part No.	Series	Service Type	Cut Tolerance
7150	7167	F	Cut Plastic Panel or Aluminum Plate **ALL** Sides ≤ 48" for Panels **Up To** .250" Thick	+/- .060"
7155	7168	F	Cut Plastic Panel or Aluminum Plate **ANY** Side > 48" for Panels **Up To** .250" Thick	
7151	7169	F	Cut Plastic Panel or Aluminum Plate **ALL** Sides ≤ 48" for Panels **Thicker Than** .250"	
7153	7170	F	Cut Plastic Panel or Aluminum Plate **ANY** Side > 48" for Panels **Thicker Than** .250"	
65-7150	65-7167	M	Cut Plastic Panel or Aluminum Plate **ALL** Sides ≤ 1220mm for Panels **Up To** 6mm Thick	+/- 1.52mm
65-7155	65-7168	M	Cut Plastic Panel or Aluminum Plate **ANY** Side > 1220mm for Panels **Up To** 6mm Thick	
65-7151	65-7169	M	Cut Plastic Panel or Aluminum Plate **ALL** Sides ≤ 1220mm for Panels **Thicker Than** 6mm	
65-7153	65-7170	M	Cut Plastic Panel or Aluminum Plate **ANY** Side > 1220mm for Panels **Thicker Than** 6mm	

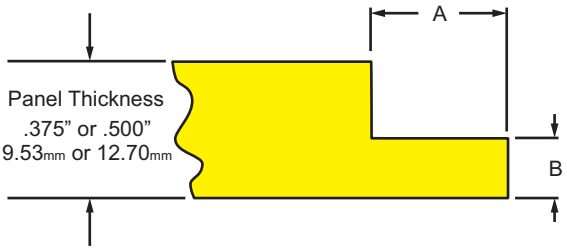
Shear Wire Mesh to Size

Part No.	Series	Service Type	Cut Tolerance
7095	F	Shear Wire Mesh **ALL** Sides ≤ 48"	+/- .060"
7100	F	Shear Wire Mesh **ANY** Side > 48"	
65-7095	M	Shear Wire Mesh **ALL** Sides ≤ 1220mm	+/- 1.52mm
65-7100	M	Shear Wire Mesh **ANY** Side > 1220mm	

Part Description:

The T-slot access routing for thick plastic panel and aluminum plate is used to enable a thicker panel or plate to be recessed within a T-slot with panel gasket. This service is for plastic panel or aluminum plate thicknesses of 375” (9.53mm) or .500” (12.7mm).



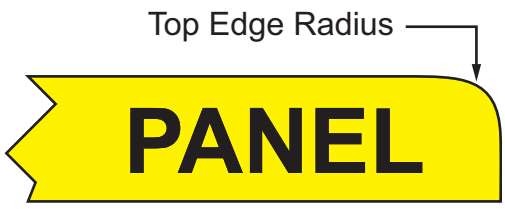


Panel Part No.	Aluminum Part No.	Series	Service Type	Description	A	B	Cut Tolerance
7530	7206	10	Routing Plastic Panel or Aluminum Plate **ALL** Sides ≤ 48”	To Mount 3/8” or 1/2” Plastic Panels or Aluminum Plate	.335”	.177”	**A** +/- .015” **B** +/- .010”
7531	7207	10	Routing Plastic Panel or Aluminum Plate **ANY** Side > 48”				
7532	7208	15	Routing Plastic Panel or Aluminum Plate **ALL** Sides ≤ 48”		.458”	.236”	
7533	7209	15	Routing Plastic Panel or Aluminum Plate **ANY** Side > 48”				
25-7530	25-7206	25	Routing Plastic Panel or Aluminum Plate **ALL** Sides ≤ 1220mm	To Mount 9.53mm or 12.70mm Plastic Panels or Aluminum Plate	9.00mm	4.50mm	**A** +/- .38mm **B** +/- .25mm
25-7531	25-7207	25	Routing Plastic Panel or Aluminum Plate **ANY** Side > 1220mm				
30-7532	30-7208	30	Routing Plastic Panel or Aluminum Plate **ALL** Sides ≤ 1220mm		9.50mm	6.00mm	
30-7533	30-7209	30	Routing Plastic Panel or Aluminum Plate **ANY** Side > 1220mm				
40-7532	40-7208	40	Routing Plastic Panel or Aluminum Plate **ALL** Sides ≤ 1220mm		13.00mm	6.00mm	
40-7533	40-7209	40	Routing Plastic Panel or Aluminum Plate **ANY** Side > 1220mm				
45-7534	---	45	Routing Plastic Panel or Aluminum Plate **ALL** Sides ≤ 1220mm		14.00mm	6.00mm	
45-7535	---	45	Routing Plastic Panel or Aluminum Plate **ANY** Side > 1220mm				

Edge Radius

Part Description:

The edge radius is used to round off either both or one sharp edge of highly visible panels. When both edges are rounded the radius will be equal to the panel thickness; when one edge is rounded the radius will equal to half the panel thickness with a minimum panel thickness of .250" (6.35mm). The edge radius can also help ease the insertion of panels into gasket. Edge radius services are for all four panel sides. Less than all four sides requires a drawing designating which sides receive the edge radius service.



Full Edge Radius

Panels Part No.	Aluminum Part No.	Series	Service Type	Radius Tolerance
7500	7221	F	Full Edge Radius Plastic Panel or Aluminum Plate **ALL** Sides Less Than Or Equal To 48"	+/- .040"
7501	7222	F	Full Edge Radius Plastic Panel or Aluminum Plate **ANY** Side Greater Than 48"	
65-7500	65-7221	M	Full Edge Radius Plastic Panel or Aluminum Plate **ALL** Sides Less Than Or Equal To 1220mm	+/- 1.02mm
65-7501	65-7222	M	Full Edge Radius Plastic Panel or Aluminum Plate **ANY** Side Greater Than 1220mm	

*Minimum Panel Thickness is .125" (3.18mm). Maximum Panel Thickness is .500" (12.7mm).

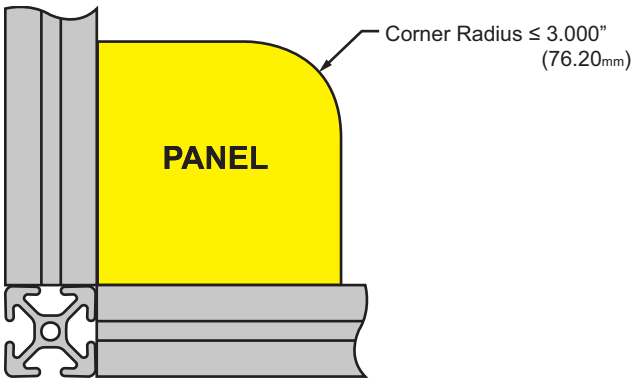
Top Edge Radius

Panels Part No.	Aluminum Part No.	Series	Service Type	Radius Tolerance
7540	7542	F	Top Edge Radius Plastic Panel or Aluminum Plate **ALL** Sides Less Than Or Equal To 48"	+/- .040"
7541	7543	F	Top Edge Radius Plastic Panel or Aluminum Plate **ANY** Side Greater Than 48"	
65-7540	65-7542	M	Top Edge Radius Plastic Panel or Aluminum Plate **ALL** Sides Less Than Or Equal To 1220mm	+/- 1.02mm
65-7541	65-7543	M	Top Edge Radius Plastic Panel or Aluminum Plate **ANY** Side Greater Than 1220mm	

*Minimum Panel Thickness is .125" (3.18mm). Maximum Panel Thickness is .750" (19.05mm).

Part Description:

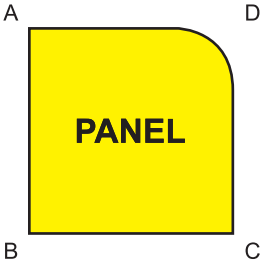
The corner radius is used to round corners on plastic panels or aluminum plates. The maximum radius is 3.00” (76.20mm). This service is commonly used for tabletops and workstations.



Panel Part No.	Aluminum Part No.	Series	Service Type	Tolerance
7179	7176	F	Corner Radius Plastic Panel or Aluminum Plate **RADIUS** ≤ 3.000” **Up To** .250” Thick	+/- .060”
7187	7195	F	Corner Radius Plastic Panel or Aluminum Plate **RADIUS** ≤ 3.000” **Thicker Than** .250”	
65-7179	65-7176	M	Corner Radius Plastic Panel or Aluminum Plate **RADIUS** ≤ 76.20mm **Up To** 6mm Thick	+/- 1.52mm
65-7187	65-7195	M	Corner Radius Plastic Panel or Aluminum Plate **RADIUS** ≤ 76.20mm **Thicker Than** 6mm	

Ordering Example:

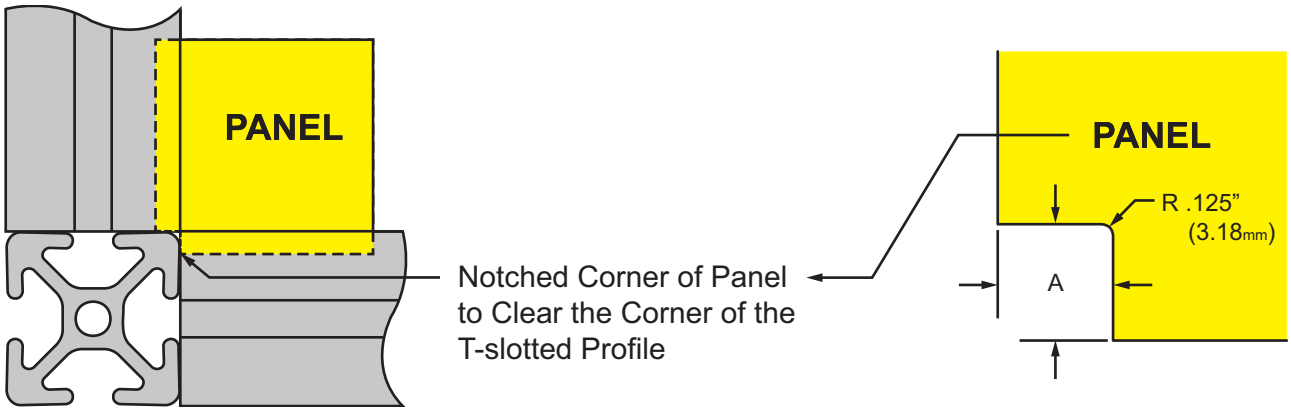
2609 (1) @ (AD) 18.000” x (AB) 18.000”
w/ 7179 on Corner D 2.50”, R



Profile Corner Clearance Notch

Part Description:

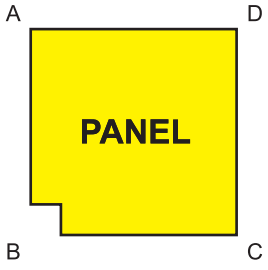
The profile corner clearance notch is used to clear a profile corner for perpendicularly mounted T-slot profiles when the panel will mount inside the T-slot. This notch is used on mesh, plastic panels, and aluminum up to .250" (6.35mm) thick.



Panel & Wire Part No.	Aluminum Part No.	Series	Service Type	A	Cut Tolerance
7504	7202	10	Corner Notch	.312"	+/- .060"
7505	7203	15		.440"	
20-7504	20-7202	20		6.00mm	+/- 1.52mm
25-7504	25-7202	25		7.90mm	
30-7505	30-7203	30		9.00mm	
40-7505	40-7203	40		11.20mm	
45-7506	---	45		14.00mm	

Ordering Example:

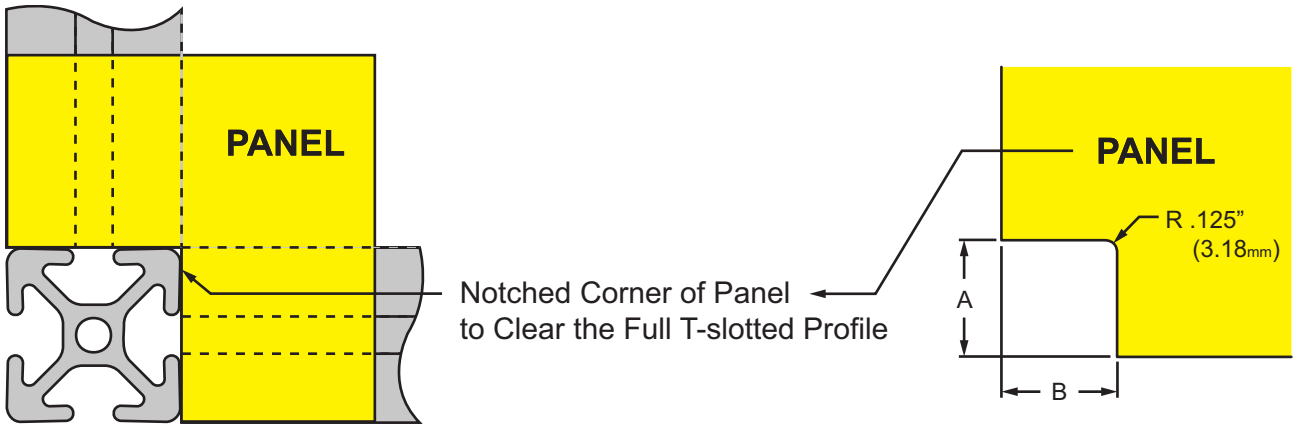
2609 (1) @ (AD) 18.000" x (AB) 18.000"
w/ 7505 Horizontal on Corner B



Full Profile Corner Clearance Notch

Part Description:

The full profile corner clearance notch is used to clear a T-slot profile when profiles are mounted perpendicularly. This notch is used on mesh, plastic panels, and aluminum up to .250" (6.35mm) thick.



Panel & Wire Part No.	Aluminum Part No.	Series	Applicable Profiles	A	B	Cut Tolerance

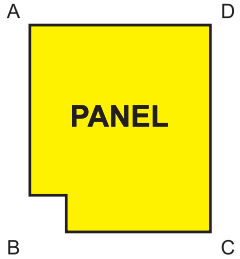
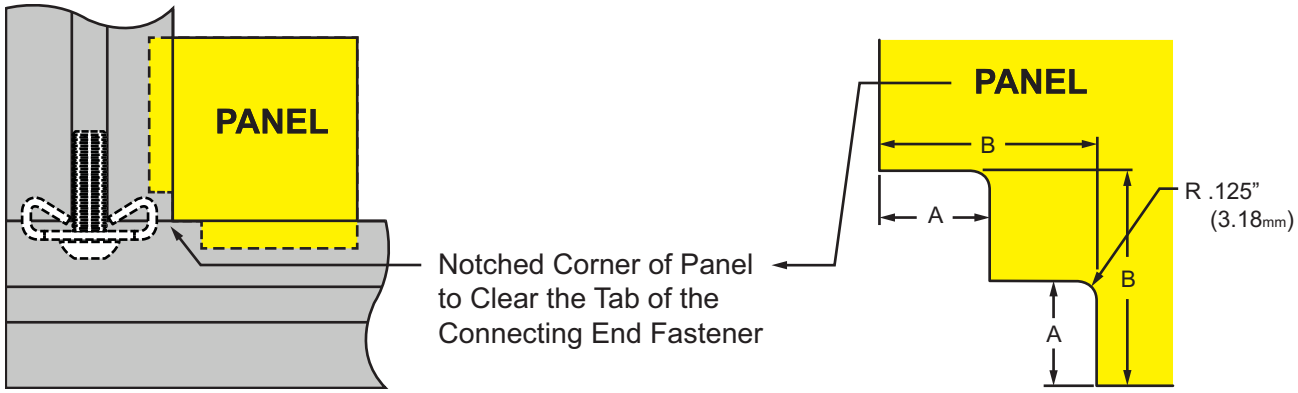
Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 22.000"
w/ 7600 on Corner B



End Fastener Clearance Notch

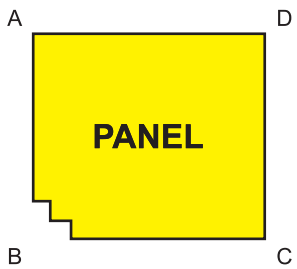
Part Description:

The end fastener clearance notch is used to clear an end fastener tab when a panel will mount inside a T-slot. This notch is used on mesh, plastic panels and aluminum up to .250" (6.35mm) thick. See pages 218-220 for information on end fasteners.



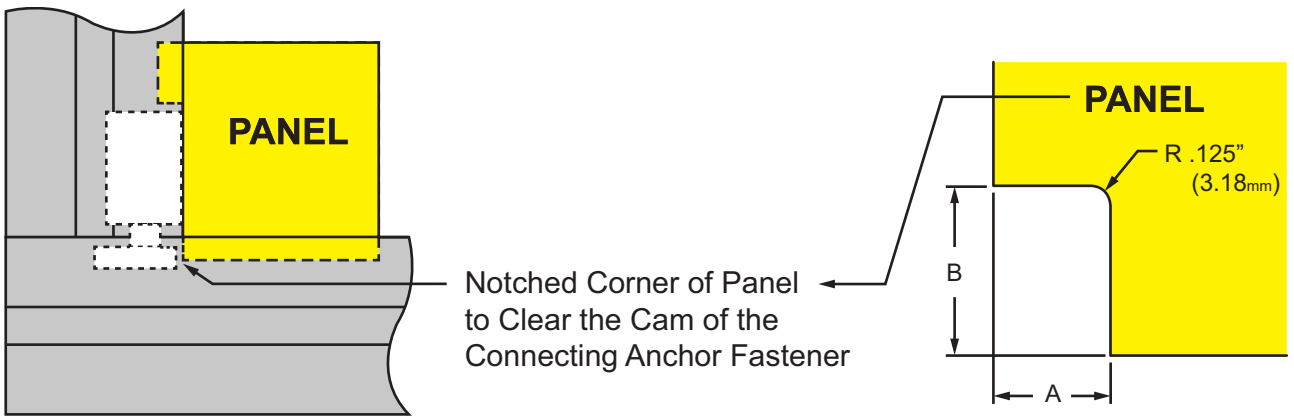
Panel & Wire Part No.	Aluminum Part No.	Series	Service Type	A	B	Cut Tolerance
7502	7211	10	Corner Notch	.250"	.650"	+/- .060"
7503	7214	15		.340"	.650"	
20-7512	20-7211	20		5.10mm	13.50mm	+/- 1.52mm
25-7502	25-7211	25		6.40mm	16.50mm	
30-7503	30-7214	30		8.60mm	14.50mm	
40-7503	40-7214	40		8.60mm	16.50mm	

Ordering Example:
2609 (1) @ (AD) 22.000" x (AB) 18.000"
w/ 7503 on Corner B



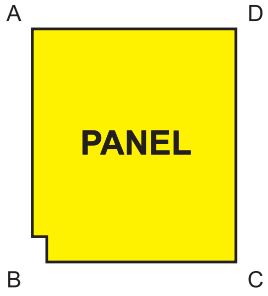
Part Description:

The anchor fastener clearance notch is used to clear an anchor fastener when a panel will mount inside a T-slot. This notch is used on mesh, plastic panels and aluminum plates up to .250" (6.35mm) thick. See pages 213-216 for information on anchor fasteners. **Additional Information:** When ordering this machining service, specify a vertical or horizontal orientation.



Panel & Wire Part No.	Aluminum Part No.	Series	Service Type	A	B	Cut Tolerance
7311	7215	10	Corner Notch	.375"	1.063"	+/- .060"
7312	7216	15		.500"	1.750"	
20-7311	20-7215	20		8.00mm	24.00mm	+/- 1.52mm
25-7311	25-7215	25		9.50mm	27.00mm	
30-7312	30-7216	30		11.00mm	34.00mm	
40-7312	40-7216	40		12.70mm	44.50mm	

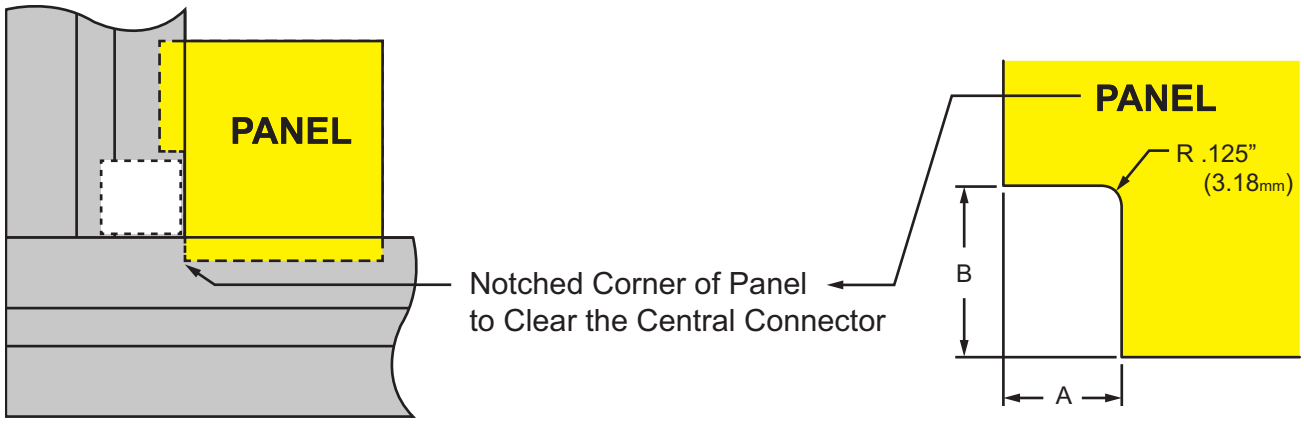
Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 21.000"
w/ 7312 Vertical on Corner B



Central Connector Clearance Notch

Part Description:

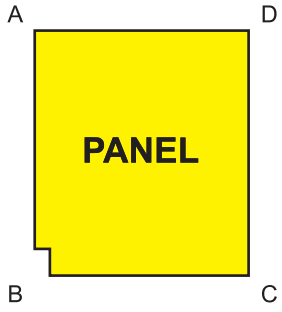
The central connector clearance notch is used to clear a central connector when a panel will mount inside a T-slot. This notch is used on mesh, plastic panels and aluminum up to .250" (6.35mm) thick. See page 224 for information on central connectors. **Additional Information:** When ordering this machining service, specify a vertical or horizontal orientation.



Panel & Wire Part No.	Aluminum Part No.	Series	Service Type	A	B	Cut Tolerance
7320	7204	15	Corner Notch	.500"	2.000"	+/- .060"
30-7320	30-7204	30		8.50mm	31.50mm	+/- 1.52mm
40-7320	40-7204	40		12.70mm	50.80mm	
45-7320	45-7204	45		14.00mm	46.00mm	

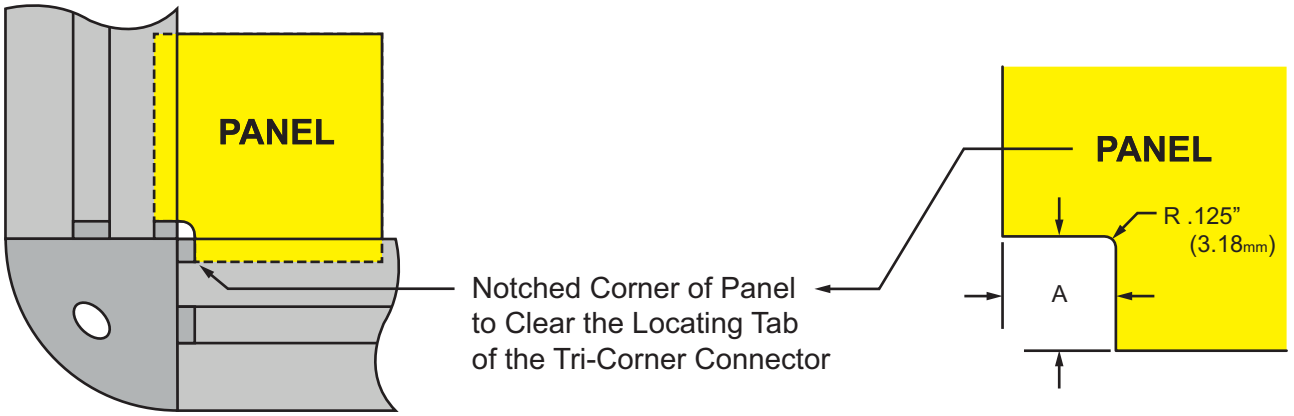
Ordering Example:

2609 (1) @ (AD) 23.000" x (AB) 28.000"
w/7320 Vertical on Corner B



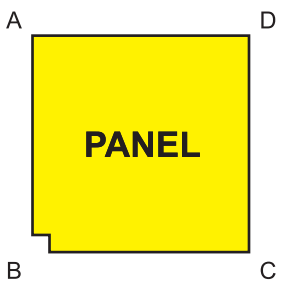
Part Description:

The corner connector clearance notch is used to clear corner connector tabs when a panel will mount inside a T-slot. This notch is used on mesh, plastic panels and aluminum plates up to .250" (6.35mm) thick.



Panel & Wire Part No.	Aluminum Part No.	Series	Service Type	A	Cut Tolerance
7515	7217	10	Corner Notch	.347"	+/- .060"
7516	7218	15		.500"	
25-7515	25-7217	25		8.81mm	+/- 1.52mm
40-7516	40-7218	40		14.75mm	

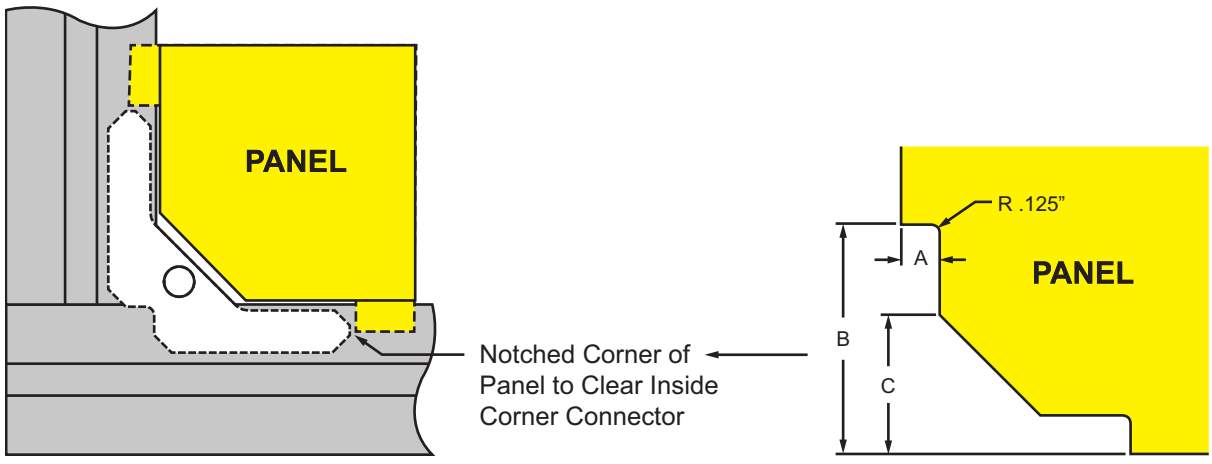
Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 18.000"
w/ 7515 on Corner B



Inside Corner Connector Clearance Notch

Part Description:

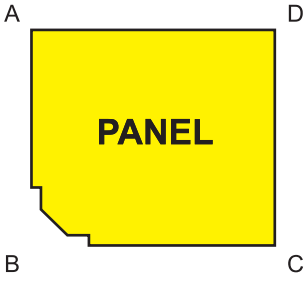
The inside corner connector clearance notch is used to clear an inside corner connector when a panel will mount inside a T-slot. This notch is used on mesh, plastic panels and aluminum plates up to .250” (6.35mm) thick. See page 223 for information on inside corner connectors.



Panel & Wire Part No.	Aluminum Part No.	Series	Service Type	A	B	C	Cut Tolerance
7161	7219	15 40	Corner Notch	.435”	2.500”	1.393”	+/- .060”

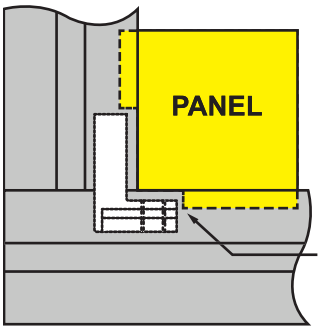
Ordering Example:

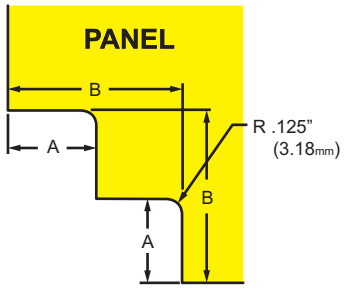
2609 (1) @ (AD) 22.000” x (AB) 18.000”
w/ 7161 on Corner B

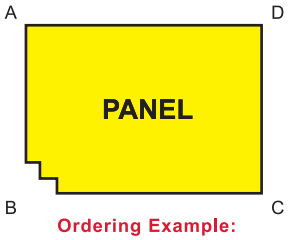


Part Description:

The hidden corner connector clearance notch is used to clear a hidden corner connector when a panel will mount inside a T-slot. See page 221 for information on hidden corner connectors. Two styles are available; one for the inside to inside corner connector and one for the inside to outside corner connector.
Additional Information: When ordering this machining service for inside to outside hidden corner connector, specify a vertical or horizontal orientation.

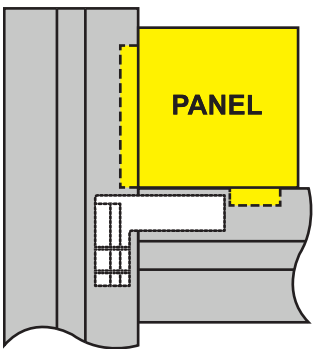


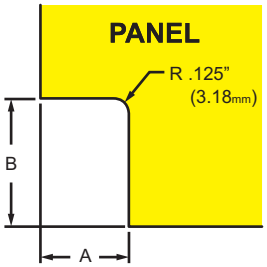


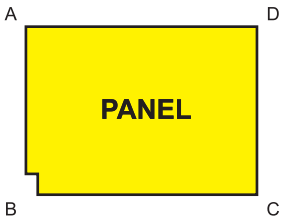


Ordering Example:
2609 (1) @ (AD) 22.000" x (AB) 18.000"
w/ 7522 on Corner B

Inside to Inside: 7422, 7522, 25-7422, 30-7522, 40-7522, 45-7522







Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 21.000"
w/ 7523 Vertical on Corner B

Inside to Outside: 7423, 7523, 25-7423 30-7523, 40-7523, 45-7523

Panel & Wire Part No.	Series	Service Type	Connector Part No.	A	B	Cut Tolerance
7422	10	Corner Notch for Inside to Inside Hidden Connector	33440	.315"	1.063"	+/- .060"
7423	10	Corner Notch for Inside to Outside Hidden Connector	33460	.315"	1.063"	
7522	15	Corner Notch for Inside to Inside Hidden Connector	33450	.405"	1.263"	
7523	15	Corner Notch for Inside to Outside Hidden Connector	33470	.405"	1.263"	
25-7422	25	Corner Notch for Inside to Inside Hidden Connector	33440	8.00mm	27.00mm	+/- 1.52mm
25-7423	25	Corner Notch for Inside to Outside Hidden Connector	33460	8.00mm	27.00mm	
30-7522	30	Corner Notch for Inside to Inside Hidden Connector	33450	8.25mm	30.04mm	
30-7523	30	Corner Notch for Inside to Outside Hidden Connector	33470	8.25mm	30.04mm

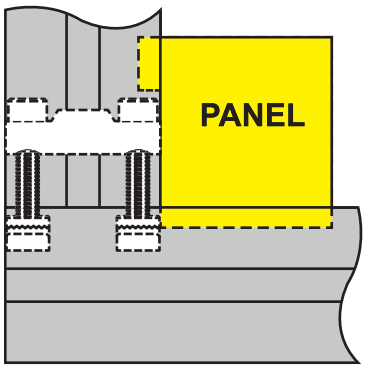
45-7523	45	Corner Notch for Inside to Outside Hidden Connector	33530	12.75mm	41.76mm	

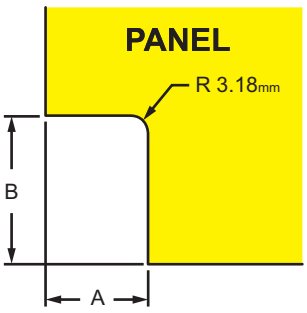
Bolt Connector / Plate Connector Clearance Notch

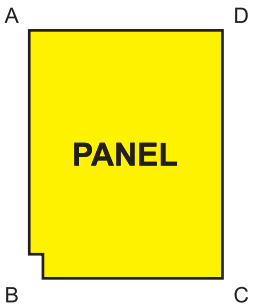
Part Description:

The bolt connector and plate connector clearance notches are used to clear a bolt connector or plate connector when a panel will mount inside a T-slot. This notch is used on mesh and plastic panels up to 6mm thick. See page 225 for information on bolt connectors and page 227 for plate connectors. **Additional Information:** When ordering this machining service, specify a vertical or horizontal orientation.

Bolt Connector Clearance Notch



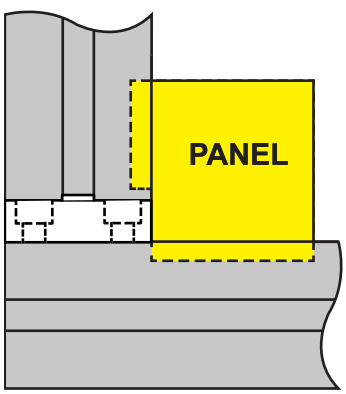


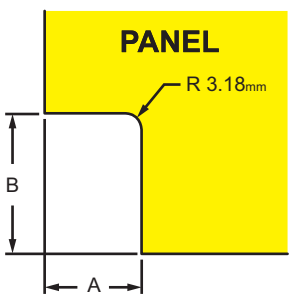


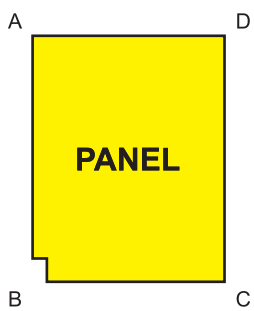
Ordering Example:
65-2609 (1) @ (AD) 580.00mm x (AB) 720.00mm
w/ 30-7314 Vertical on Corner B

Panel & Wire Part No.	Series	Service Type	A	B	Cut Tolerance
30-7314	30	Corner Notch	11.00mm	30.00mm	+/- 1.52mm
45-7317	45		14.00mm	47.00mm	

Plate Connector Clearance Notch







Ordering Example:
65-2609 (1) @ (AD) 580.00mm x (AB) 720.00mm
w/ 45-7323 Horizontal on Corner B

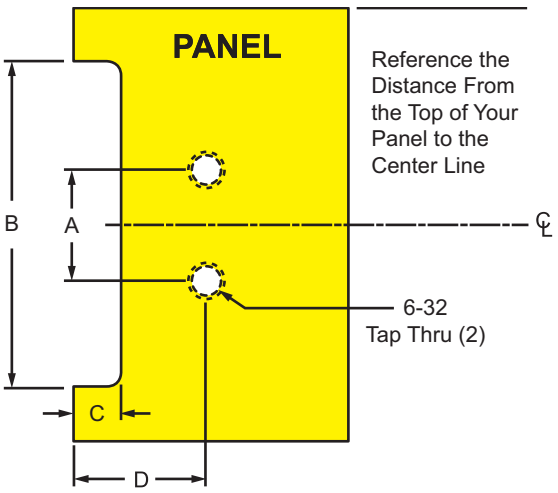
Panel & Wire Part No.	Series	Service Type	A	B	Cut Tolerance
45-7323	45	Corner Notch	14.00mm	27.00mm	+/- 1.52mm

Grabber™ Door Catch / Locking Grabber™ Handle Panel Milling

Part Description:

The Grabber™ door catch and Grabber™ handle milling services are used to add a handle to a plastic panel or aluminum plate. The Grabber™ door catch milling provides clearance for the door catch while the Grabber™ handle milling service machines a hole to enable quick and simple installation of the handle. See page 576 for information on the Grabber™ door catch and page 566 for the locking plastic panel Grabber™ handle.

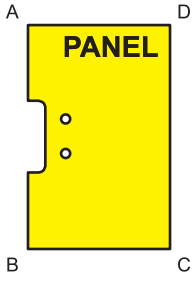
Grabber™ Door Catch Panel Milling



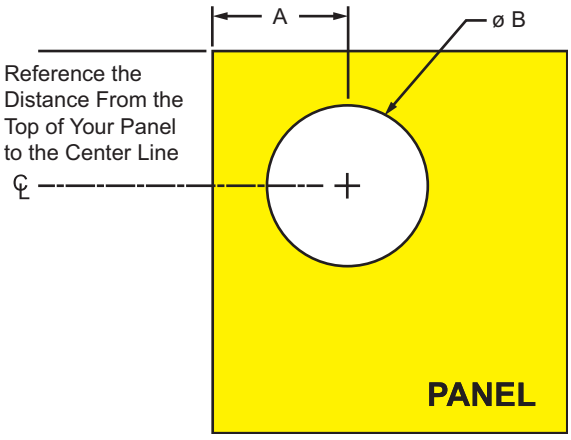
Part No.	Series	A	B	C	D	Cut Tolerance
7313	F	1.600"	4.750"	.313"	1.125"	+/- .020"
65-7313	M	40.60mm	120.70mm	8.00mm	28.60mm	+/- .50mm

Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 22.000"
w/ 7313 on Side AB @ 12.000"

(All machining center lines will be called out from point "A" on the panel)



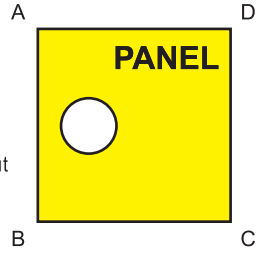
Locking Grabber™ Handle Panel Milling



Part No.	Series	A	B	Hole Location Tolerance
7510	F	2.000"	2.000"	+/- .010"
65-7510	M	50.80mm	50.80mm	+/- .25mm

Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 18.000"
w/ 7510 on Side AB @ 9.000"

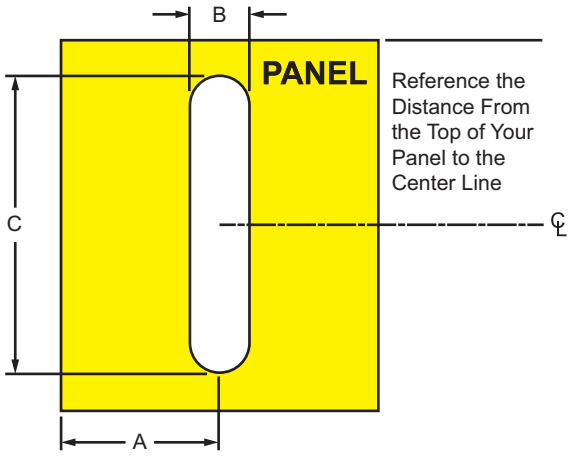
(All machining center lines will be called out from point "A" on the panel)



Flush Handle Plastic Panel Milling

Part Description:

The flush handle plastic panel milling service is used with plastic panels to provide a slot which enables quick installation of a flush plastic panel handle. For more information on this handle see page 564.

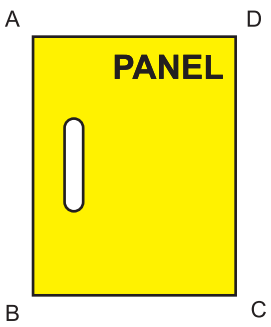


Part No.	Series	Handle Part No.	A	B	C	Hole Location Tolerance
7520	F	2056	2.000"	.625"	3.000"	+/- .010"
7521	F	2058	2.000"	.625"	4.125"	
65-7520	M	65-2056	50.80mm	15.88mm	76.20mm	+/- .25mm
65-7521	M	65-2058	50.80mm	15.88mm	104.78mm	

Ordering Example:

2609 (1) @ (AD) 18.000" x (AB) 20.000"
w/ 7520 side AB @ 10.000"

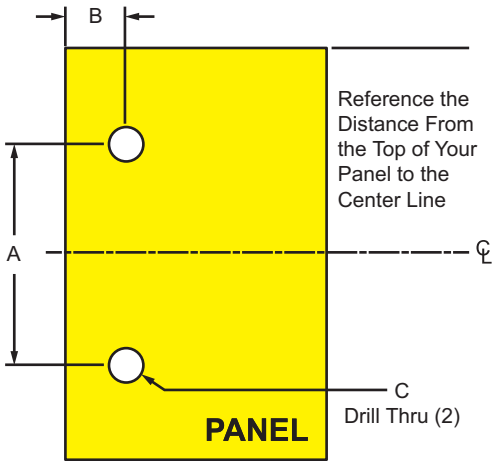
(All machining center lines will be called out from point "A" on the panel)



Adjustable Tension and Detent Hinge Plastic Panel Milling

Part Description:

The adjustable tension and detent hinge plastic panel milling is used to create through holes for mounting adjustable tension and detent panel hinges to a plastic panel. For more information on these hinges see pages 541-543, respectively.

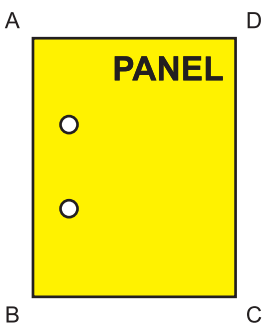


Part No.	Series	Hinge Part No.	Hinge Type	A	B	C	Hole Location Tolerance
7581	10	2081	Adjustable	1.250"	.438"	.201"	+/- .010"
7582	10	2071	Detent	1.250"	.440"	.188"	
7580	15	2080	Adjustable	1.880"	.688"	.375"	
7583	15	2091	Detent	1.340"	.530"	.250"	
25-7581	25	25-2081	Adjustable	31.75mm	11.13mm	5.11mm	+/- .25mm
25-7582	25	25-2071	Detent	31.75mm	11.18mm	4.78mm	
40-7580	40	40-2080	Adjustable	47.75mm	17.48mm	9.53mm	
40-7583	40	40-2091	Detent	34.04mm	13.46mm	6.35mm	

Ordering Example:

2609 (1) @ (AD) 18.000" x (AB) 20.000"
w/ 7581 on Side AB @ 5.000"

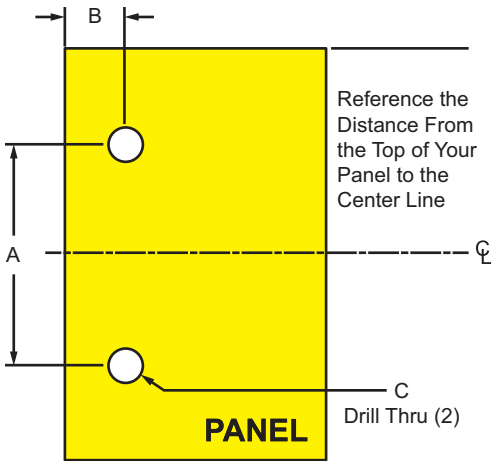
(All machining center lines will be called out from point "A" on the panel)



Plastic Door Handle / Steel Door Handle Plastic Panel Milling

Part Description:

The plastic door handle and steel door handle milling services provide through holes for mounting plastic and steel door handles to plastic panels. See page 558 for information on the plastic door handle and page 563 for the steel door handle.



Plastic Door Handle

Part No.	Series	Handle Part No.	A	B	C	Hole Location Tolerance

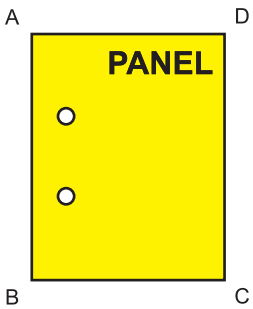
Steel Door Handle

Part No.	Series	Handle Part No.	A	B	C	Hole Tolerance
7587	F	2070	3.000"	1.000"	.188"	+/- .010"
65-7587	M	65-2070	76.20mm	25.40mm	4.78mm	+/- .25mm

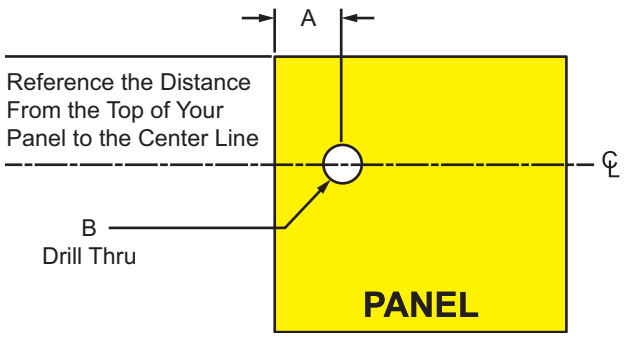
Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 20.000"
w/ 7584 on Side AB @ 10.000"

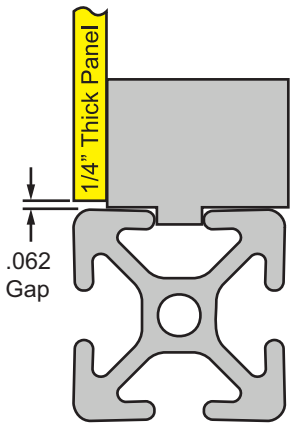
(All machining center lines will be called out from point "A" on the panel)



Part Description:

The panel mount block plastic panel milling service is used to provide a through hole for mounting a plastic panel to a panel mount block. For more information on panel mount blocks see pages 474-477.

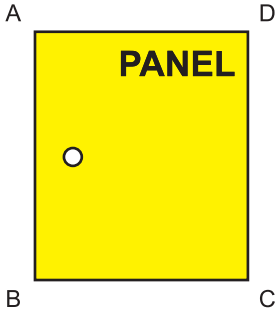




Part No.	Series	A	B	Hole Location Tolerance
7589	10	.313"	.313"	+/- .010"
7588	15	.375"	.375"	
25-7589	25	8.48mm	8.00mm	+/- .25mm
40-7588	40	10.08mm	10.00mm	

Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 18.000"
w/ 7589 on Side AB @ 9.000"

(All machining center lines will be called out
from point "A" on the panel)

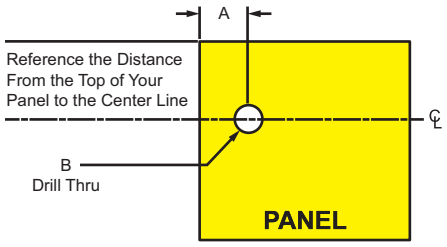


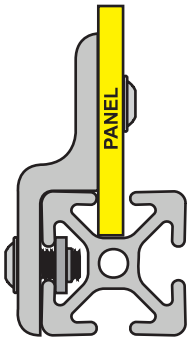
Panel Retainer Milling

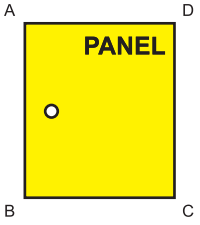
Part Description:

The panel retainer milling service provides through holes for mounting a single arm narrow or wide retainer to plastic panels. See pages 484-487 for information on single arm panel retainers.

Single Arm Narrow Panel Retainer







Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 18.000"
w/ 7593 on Side AB @ 4.500"

(All machining center lines will be called out from point "A" on the panel)

Part No.	Series	Retainer Part No.	A	B	Hole Location Tolerance
7593	10	2496 / 2512	.868"	.313"	+/- .010"
7595	15	2434 / 2515	1.290"	.375"	
20-7593	20	20-2496	16.80mm	6.15mm	+/- .25mm

45-7596	45	45-2433	45.00mm	37.80mm	9.52mm	

Part Description:

The plastic panel and aluminum plate cutout machining services provide an opening commonly used for adding a door or access point for a guard or enclosure. **Additional Information:** A drawing is required with this machining service; for project design assistance, contact a Design Technician at www.8020.net.

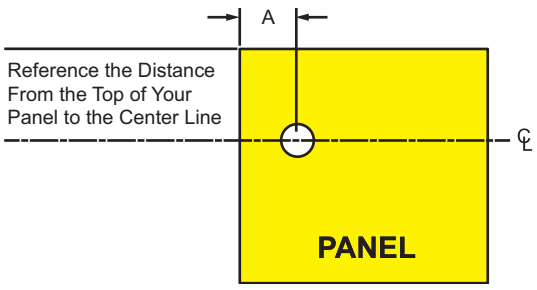
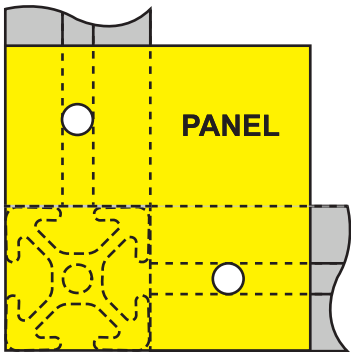
Top Mount Milling for Plastic Panel or Aluminum Plate

Part Description:

The top mount milling for plastic panels or aluminum plates provides clearance to mount the panel or plate to the face of a profile. This is commonly used for shelves, tabletops, and material handling carts.
Additional Information: The thickness of the panel or plate must be .250" (6mm) or thicker.





Part No.	Series	Service Type	A	Hole Location Tolerance
7507	10	Drill Thru 0.281" Panel 1/2" from Edge	.500"	+/- .010"

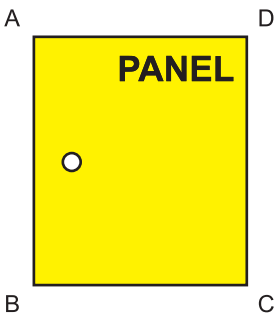
Ordering Example:
2609 (1) @ (AD) 18.000" x (AB) 18.000"
w/ 7589 on Side AB @ 9.000"

(All machining center lines will be called out from point "A" on the panel)



Part Description:

There are several milling services available to assist with custom mesh, plastic panels, and aluminum plate applications. **Additional Information:** A drawing is required with this machining service; for project design assistance contact a Design Technician at www.8020.net.

Circular Cutout Plastic Panel or Aluminum Plate

Panel Part No.	Aluminum Part No.	Series	Service Type	Tolerance

Product Type Index

INTRODUCTION, 2-48
- ***What is 80/20, 2-5***
- ***Made with 80/20 Stuff, 6-27***
- ***Peace of Mind, 28-35***
- Business Model, 29
- One-Stop-Shop, 30
- 80/20 Difference, 31
- Ongoing Support, 31
- Customer Support, 32
- Local Distributor Network, 32
- Design Assistance, 33
- Free Design Tools, 34-35
- ***80/20 Services, 36-44***
- 80/20 Builds, 36-37
- Custom Machining, 38-39
- Panel Shop, 40-41
- Metal Finishing, 42
- Standard Machining, 43
- Custom Packaging, 44
- ***Ordering Information, 45-47***
- Shipping Schedule, 45-46
- Preferred Carriers, 46
- Damaged or Lost Shipments, 46
- Return Policy, 46
- Warranty, 47

PROFILES, 49-198
- Profile Education, 54-66
- Profile Quick Reference, 67-74
- T-slot Profiles, 76-183
  - ***Fractional Profiles, 76-132***
  - 10-Series T-slot Profiles, 76-97
  - 15-Series T-slot Profiles, 98-132
  - ***Metric, 133-183***
  - 20-Series T-slot Profiles, 133-135
  - 25-Series T-slot Profiles, 136-147
  - 30-Series T-slot Profiles, 148-155
  - 40-Series T-slot Profiles, 156-179
  - 45-Series T-slot Profiles, 180-183
- Ready Tube®, 184-190
  - Square RT Profiles, 184-185
  - Single Flange RT Profiles, 186-187
  - Double Flange RT Profiles, 188-190
- Quick Frame®, 191-197
  - Square QF Profiles, 191
  - Single Flange QF Profiles, 192-194
  - Double Flange QF Profiles, 195-197

FASTENING METHODS, 199-442
- Fastening Methods Education, 206-212
- Internal Fasteners, 213-226
  - ***Anchor Fasteners, 213-216***
  - Standard Anchor Fastener Assemblies, 213
  - Standard Anchor Fastener Cam Only, 214
  - Short Double Anchor Fastener Assemblies, 215
  - Long Double Anchor Fastener Assemblies, 216
  - ***Butt Fasteners, 217***
  - ***End Fasteners, 218-220***
  - Standard End Fasteners, 218
  - Single Tab End Fasteners, 219
  - Double End Fasteners, 220
  - ***Inside Corner Connectors, 221-223***
  - Hidden Corner Connectors, 221
  - Miter Connectors, 222
  - 90° Inside Corner Connectors, 223
  - ***Bolt Connectors, 224-225***
  - Central Connectors and Cover Cap, 224
  - Bolt Connectors, 225
  - ***Milling Connectors, 226***
- External Fasteners, 227-335
  - Plate Connectors, 227
  - ***45 Degree Supports, 228-234***
  - 45 Degree Support Connector, 228
  - 45 Degree Support Assemblies, 229-234
  - ***Straight Plates, 235-237***
  - 2 Hole - Straight Flat Plates, 235

6 Hole - Transition Flat Plates, 250-251
8 Hole - Transition Flat Plates, 252
Angled Plates, 253-269
90° Angled Flat Plates, 253-261
15° Angled Flat Plates, 262-263
30° Angled Flat Plates, 264-265
45° Angled Flat Plates, 266-267
60° Angled Flat Plates, 268-269
Tee Plates, 270-277
4 Hole - Tee Flat Plates, 270
5 Hole - Tee Flat Plates, 271
6 Hole - Tee Flat Plates, 272
7 Hole - Tee Flat Plates, 273
8 Hole - Tee Flat Plates, 274
11 Hole - Tee Flat Plates, 275
12 Hole - Tee Flat Plates, 276
16 Hole - Tee Flat Plates, 277
Cross Plates, 278-281
7 Hole - Cross Flat Plates, 278
12 Hole - Cross Flat Plates, 279
16 Hole - Cross Flat Plates, 280
20 Hole - Cross Flat Plates, 281
Right Angle Plates, 282-283
5 Hole - "L" Flat Plates, 282
5 Hole - "T" Flat Plates, 283
Corner Brackets, 284-320
2 Hole - Corner Brackets, 284-293
2 Hole - Corner Bracket Cover Caps, 288-293
3 Hole - Corner Brackets, 294-295
4 Hole - Corner Brackets, 296-301
4 Hole - Corner Bracket Cover Caps, 299
6 Hole - Corner Brackets, 302-309
8 Hole - Corner Brackets, 310-313
8 Hole - Corner Bracket Cover Caps, 311-313
9 Hole - Corner Brackets, 314
10 Hole - Corner Brackets, 315
12 Hole - Corner Brackets, 316-317
18 Hole - Corner Brackets, 318
3 Way - Corner Brackets, 319-320
Transition Corner Brackets, 321-326
2 Hole - Transition Corner Brackets, 321-322
4 Hole - Transition Corner Brackets, 323-325
8 Hole - Transition Corner Brackets, 326
Corner Gussets, 327-330
2 Hole - Gusseted Inside Corner Brackets, 327
4 Hole - Gusseted Inside Corner Brackets, 328-329
8 Hole - Gusseted Inside Corner Brackets, 330
Corner Connectors, 331-335
3 Way - Corner Connectors, 331, 333-335
2 Way - Corner Connectors, 332
Variable Angle Connectors, 336-363
Clamp Blocks, 336-337
Standard Angle Clamp Blocks, 336
Economy Angle Clamp Block, 337
2 Hole - Pivot Joints, 338-339
Pivot Plates, 340-344
3 Hole - Pivot Plates, 340-342
5 Hole - Pivot Plates, 343-344
Structural Pivots, 345-363
Structural Pivot Nubs, 345-347
Structural Right Angle Pivot Nubs, 348-350
Structural Pivot Arms, 351-353
Structural Pivot Assemblies, 354-363
Hardware, 364-406
T-Nuts, 364-386

Product Type Index

Slide-In T-Nuts, 364-373, 384-385

Glossary

0 Degree Dynamic Pivot Nub	A connecting block that allows profiles to swing 180 degrees parallel to the mounting profile.
10 Series	80/20's family of T-slot profiles utilizing 1.0 inch and 0.5 inch centerlines.
15 Series	80/20's family of T-slot profiles utilizing 1.5 inch and 0.75 inch centerlines.
20 Series	80/20's family of T-slot profiles utilizing 20mm and 10mm centerlines.
25 Series	80/20's family of T-slot profiles utilizing 25mm and 12.5mm centerlines.
30 Series	80/20's family of T-slot profiles utilizing 30mm and 15mm centerlines.
40 Series	80/20's family of T-slot profiles utilizing 40mm and 20mm centerlines.
45 Series	80/20's family of T-slot profiles utilizing 45mm and 22.5mm centerlines.
45 Degree Support	Precut and assembled profiles with 45° miters that add strength to corner connections.
6105-T5	An aluminum alloy used in many 80/20 profiles. It offers high strength, excellent machinability, and a great aesthetic finish.
80/20 Builds	The project assembly division of 80/20® Inc. There are three service levels; preloading, subassembly and full assembly.
90 Degree Flat Plate	A connecting plate used to make right angle connections of T-slot profiles.
90 Degree Dynamic Pivot Nub	A connecting block that allows profiles to swing 180 degrees perpendicular to the mounting profile.
ABS Haircell	Acrylonitrile Butadiene Styrene: decorative plastic sheet material.
Access Hole	A hole specifically located in the T-slots that allow access to tighten an end fastener.
Adjustable Hinge	A hinge with adjustable tension between the leaves.
Aesthetic	Tasteful, pleasing, or inventive.
Align-a-Groove	Shallow grooves running the length of some of 80/20®'s T-slotted profiles that aid in aligning profiles during assembly.
Aluminum Composite	Two thin aluminum sheets bonded together with a corrugated polyallomer core.
Aluminum Extrusion	Aluminum bar produced by heating and pressing the aluminum material through a shaped opening in a die, forming a distinctive profile.
Anchor Fastener	A strong and adjustable fastener used to join two T-slotted profiles at right angles.
Anodize	A thin, protective electrochemical coating used on aluminum surfaces; can be clear or colored.
ASTM	The American Society for Testing Materials: organization that sets testing standards and methods for materials.
Attitude	Our positive, can-do disposition that sets 80/20® apart from the rest of the competition.
AutoQuoterX® II	80/20's free 64-bit accessible plugin used in conjuction with full versions of AutoCAD®.
BHSCS	Button Head Socket Cap Screw.
Black Chromate	A black, corrosion-resistant coating used on some ferrous screw products.
Black Zinc	A black, corrosion-resistant coating used on some metal products.
Bolt Assembly	A single part number that makes ordering combinations of fasteners easier and faster.
Bushing	A removable cylindrical lining for an opening used to limit the size of the opening, resist abrasion, or serve as a guide.
Butt Fastener	Connects profiles end-to-end for a strong, flush connection.
CAD	Computer Aided Design or Computer Aided Drafting.
Chamfer	To bevel off the right angled edge of a corner.
Cheater Pipe	An improvised breaker bar made from a length of pipe and a wrench, used to provide extra torque.
Clear Chromate	A clear, corrosion-resistant coating used on some ferrous metal products.
Coefficient of Friction	The amount of force between two materials rubbing against each other.
Counterbore	A cylindrical, flat-bottomed hole drilled partially through a profile.

Glossary

Countersink	To chamfer a screw hole to allow the screw head to remain level with the mounting surface.
Cross Clamp	A stanchion block used to connect two tubes at right angles.
Cross Flat Plate	A pre-drilled plate used to connect profiles that intersect at right angles.
Deburr	To remove a sharp edge from a machined surface.
Double Flange	A part with two opposing projections, commonly used for attachment to other surfaces.
Double T-Nut	A T-nut containing two threaded holes with centerlines that match those of flat plates, used to speed up assembly.
Drill Jig	A fixture used for drilling perpendicular access holes.
Drop Lock	An 80/20 T-slot profile design feature that consists of a 2° decline in the T-slot flange. When a fastener is tightened to or beyond the necessary torque, the flange will press up to the adjoining profile, creating pressure that tightly holds the two bars together.
Dynamic Pivot Nub	An anchoring block fastened to the T-slot allowing mounted profiles full 180-degree motion, perpendicular to or parallel with the T-slot.
End Cap	A black plastic cover for the profile end.
End Fastener	A connecting clip and screw that provides a clean, hidden 90° connection for T-slot profiles.
Ergonomics	An applied science concerned with arranging things people interact with efficiently and safely.
FBHSCS	Flanged Button Head Socket Cap Screw.
FDA	The United States Food and Drug Administration.
FHSCS	Flat Head Socket Cap Screw.
Flange	A rib or rim for strength, for guiding, or for attaching to another object.
Flange Mount Caster	A caster with a pre-drilled flange to mount to a base plate.
Flat Plate	A pre-drilled joining plate or corner bracket used to connect profiles.
Floor Mount Base Plate	A pre-drilled bracket assembly used to anchor an application to the floor.
Friction Hinge	A hinge that holds doors open at variable angles to provide hands-free access for vertical-lifting smaller doors.
Gusset	A supported 45-degree angled bracket used to connect profiles at right angles.
HDPE	High Density Polyethylene.
High Pressure Laminate	A high strength, durable material used for workstations, countertops, and other work surfaces.
Inside Corner Bracket	A pre-drilled angled fastener used to connect profiles at right angles.
Jam Nut	A hex nut used to fix the height position of a threaded leveling foot or caster in the end of a profile.
“L” Structural Pivot Arm	A pre-drilled angled fastener used to connect profiles to pivot nubs.
Leveling/Anchoring Base Plate	A pre-drilled and tapped plate used to mount both leveling feet and floor anchor bolts to a profile frame.
LHSCS	Low Head Socket Cap Screw.
Lift-Off Hinge	An aluminum hinge designed to allow door panels to be removed easily by lifting the door while open. It also utilizes two pin lengths to facilitate fast, easy door replacement.
Linear Bearing	A slide that allows in-line motion using the T-slotted frame as a rail, and UHMW-PE bearing pads as guides. Patented by 80/20®.
Linear Bearing Brake Hole	A precisely located hole that allows for attachment of brake hardware to the bearing housing.
Linear Bearing Brake Kit	The hardware kit consisting of a handle, washer, and T-slot stud used to fix the position of a linear bearing.
Locking Grabber™ Handle	A cabinet latch used for panel doors that locks with a key.
Mesh Retainer	An anchoring bracket that attaches wire cloth or expanded metal panels to a T-slot frame.

Glossary

Miter Cut	An angled cut.
Mounting Block	Used to attach a hollow or solid round tube profile to a T-slot frame.
MW	Molecular Weight: used in measuring plastic density.
Neoprene	A black, hard rubber product.
Nylatron GS	An extruded plastic used in the manufacturing of 80/20 roller wheels.
Nylon	Any of several polymeric, thermoplastic amides formed into strong elastic thread by forcing a melt through fine jets.
Open Style Access Hole	Customer-specified locations for access holes used to tighten end fasteners.
OSHA	Occupational Safety and Health Administration.
Panel Mount Block	An adjustable mounting block, keyed to the T-slot, used to mount panels to a profile frame.
Panel Retainer	An anchoring bracket that attaches plastic or sheet panels to a T-slot frame.
Pawl	A rotating catch used to capture and hold a door shut.
Phenolic Resin	A decorative, durable surface with exceptional impact and scratch resistance.
Pivot	To turn or oscillate on. To rotate about a stationary point.
Pivot Bracket	A flat plate that allows a profile to pivot 90º or 180º relative to the mounting profile and lock in place.
Polycarbonate	An impact-resistant thermoplastic resin that is hard, tough, and moisture resistant. Trade names Lexan® or Makrolon® polycarbonate
Polyurethane	A tough flexible plastic with high load bearing properties used on some 80/20 casters.
Position Floor Lock	A braking device that prevents a frame on wheels from rolling.
Powder Coat	An electrostatically applied paint that provides superior protection.
Preload	To load fasteners onto a flat plate or bracket to speed up assembly.
Pressure Manifold Plate	A pre-drilled plate used with a gasket to form a pressurized air or fluid chamber inside the cavity of a T-slotted profile.
PVC	Polyvinyl Chloride: used in lightweight plastic sheet and snap-on panel gaskets.
Quick Frame®	80/20's economical, lightweight framing alternative, utilizing one-inch square aluminum tubing and nylon push-in corner connectors.
Ready Tube®	Aluminum framing system featuring prefabricated mounting holes.
RGA	Returned Goods Authorization: A number assigned by 80/20's customer service department to allow faster processing of a return shipment.
Dynamic Right Angle Pivot Nub	A connecting block that allows mounted profiles to swing 90 degrees parallel to or perpendicular to the attached T-slot.
Rigid Caster	A wheel that is intended for straight back and forth motion. It can be combined with a swivel caster to provide directional change.
Roller Wheel	A wheel, keyed to fit the 80/20 profile T-slot, allowing 80/20 profiles to be used as rails.
Rust	Oxidation commonly associated with steel products.
SS	Stainless Steel.
SHCS	Socket Head Cap Screw.
Single Flange	A material with one projection, commonly used for attachment to other surfaces.
Slotted Corner Bracket	A fastener used for connecting profiles at right angles. The slotted holes allow for easy adjustments.
Stanchion	A block used for mounting round tubes to a T-slotted frame, adding a fourth or fifth axis of mobility.
Swivel Caster	A wheel that enables pivot turns and instant response to directional change.
Tap	To add threads to an extruded hole in a T-slot profile.
"T" Flat Plate	A pre-drilled plate used to connect profiles that intersect at right angles.

Glossary

Threaded Stem Swivel Caster	A steerable wheel mounted to a frame by means of a threaded rod.
T-Nut	A special threaded flat screw nut designed to fit into the T-slot of 80/20® profiles.
Transition Bracket	A pre-drilled angled bracket designed to connect different series of profiles.
Transition Plate	A pre-drilled plate designed to connect different series of profiles.
Triple T-Nut	A T-nut with three threaded holes with centerlines that match those of flat plates, used to speed up assembly.
T-Slot Cover	A cover that fits in a T-slot channel to prevent dust and debris build up, cover wires and tubes, and add a polished look.
T-Slot Designation Chart	A diagram to assist in locating machining service points for 80/20® T-slotted profiles.
T-Slot Stud	A threaded bolt designed so that the bolt head fits into the T-slot of a profile, leaving the threaded end protruding.
T-Slot	An opening extruded into, or machined out of, a solid surface in the shape of a “T,” designed to capture or hold in place fasteners that can be located anywhere along the surface of the material.
TYP.	Typical.
USDA	United States Department of Agriculture.
UHMW	Ultra High Molecular Weight
UHMW-PE	Ultra High Molecular Weight Polyethylene: excellent abrasion-resistant material used for bearing pads.
Universal Dynamic Pivot Assembly	A connecting block assembly that allows mounted profiles to swing 180 degrees parallel to or perpendicular to the attached T-slot.
Universal Dynamic Pivot Nub	A connecting block that allows mounted profiles to swing 180 degrees parallel to or perpendicular to the attached T-slot.
Wire Duct	A one piece, flexible molded nylon duct for containing wires and tubes. Open slots allow for lead offs; pieces snap together end to end for continuous travel.
Zinc Plating	A bright silver or black corrosion-resistant coating used on some metal products.
