## Video Cables - VGA

Our SVGA cables are TRIPLE shielded, and available in lengths from 3ft to 200ft - in standard, or Ultra-Thin configurations. Also available: VGA/Audio Combination Cables, VGA Extension Cables, Switches, Amplifiers, and Video Distribution Units. VGA cables are considered legacy type cables used to connector older computers to VGA type monitors. Many newer monitors while supporting newer technologies such as HDMI, DVI, USB Type-C, many still support the analog 15-pin trapezoid shaped VGA connector. Most devices have a FEMALE port, while VGA cables have MALE connector pins.

## Adapters - BNC

### BNC Adapters

The BNC adapter or BNC connector is a miniature quick connect/disconnect radio frequency connector used for coaxial cable. BNC connectors are used with miniature-to-subminiature coaxial cable in radio, television, and other radio-frequency electronic equipment, test instruments, and video signals. The BNC was commonly used for early computer networks, including ARCnet, the IBM PC Network, and the 10BASE2 variant of Ethernet.

## USB CHARGERS - USB Charging Blocks

USB Wall-plate Chargers for Cell Phones, Tablets, and Other Devices. There are TWO fast charging standards currently for all smart phones developed in the past 8 years:

**USB-PD** - Apple iPhones 8 or greater, and many new Android/Google phones use the USB-PD (Power Delivery) method for FAST CHARGING. USB-PD for phones generally uses charging blocks that provide variable voltages up to 14.5v and 2A, for a total power of 96 watts. USB-PD is only available with the USB Type-C connector at the source charge block.

**QuickCharge (QC)** - Developed by Qualcomm, this standard is supported by nearly all newer Android and Windows phones, supporting up to 20 volts and 5 amps for a total maximum power of 100 watts. QC is available from either a Type-A or Type-C connector at the source charge block.

QUICK-CHARGE (QC) and USB-PD are not compatible with each other. Typically, a charging block supports ONE or the other standard, but not both. Some newer Android, Google, and Windows phones will accept both the USB-PD or QB charging standards

## Computer Cables - Firewire / 1394

Firewire / 1394 / iLink

Firewire cables (also known as iLink, and IEEE cables) are primarily used in the marketplace to connect Digital Video Cameras and Hard Drives to PC's. A typical firewire port found on a Digital Video Camera is a "4 pin" variety. My Cable Mart carries many lengths and adapters to go from 6 pin to 4 pin, 6 pin to 9 pin, and 9 pin to 4 pin.

## Computer Cables - SAS & Mini SAS Cables

Serial-attached SCSI (SAS) cables provide serial communication for transfer of data for directly attached devices, such as hard disk drives, solid-state drives, and CD-ROM drives. In computing, Serial Attached SCSI (SAS) is a point-to-point serial protocol that moves data to and from computer-storage devices such as hard disk drives and tape drives.

SAS technology is have created varies different connectors, such as SFF-8086, SFF-8087, SFF-8088, SFF-8470, and SFF-8484 to name a few of the 17 different types now supported

## TV Antennas

Antennas for HDTV and Radio

Get up to 30 digital crystal-clear UNCOMPRESSED 1080P channels right over the air for FREE using an off-air TV antenna. Many cable and satellite providers have a F-Coax input connection on their receivers allowing you to map channels to their local feeds/guides. Check your local ABC, NBC, CBS, FOX (and other) providers to find out if they are broadcasting their channels in UHF (new standard) or VHF (old standard - but still used in some markets) to determine if you need a UHF ONLY or UHF/VHF supporting antenna.
